THE METROPOLITAN DAILY PRESS.

VII.

THE GRAPHIC.

The *Daily Graphic* is the only illustrated daily paper published in this country. It was established in the early part of 1873, by a stock corporation known as the *Graphic Company*. The business management was placed in the hands of J. H. and C. M. Goodsell, and D. G. Croly, formerly of the *World*, assumed the editorial chair. A short time ago the business management changed, the Messrs. Goodsell retiring from the active control of the paper, but still retaining a number of shares of the stock of the *Graphic Company*. Some two or three years ago Mr. Croly left the editorial chair, which is now occupied by I. M. Gregor.

The circulation of the *Graphic* was for some time after the establishment of the paper very limited, and a large amount of money was expended in an effort to place it on a paying basis. For a long while it was believed that the paper would never be successful, as there was not at that time a field for an illustrated daily, and it was very doubtful whether one could be created, yet the projectors of the enterprise had confidence of the success of their undertaking, and spared no pains or expense to attract the patronage of the public. This they have succeeded in doing. The circulation of the *Graphic* is very wide, extending to all of the leading cities of this country, and many of the leading points in Europe.

The process by which the *Graphic* gets up its illustrations is entirely its own, being a patented arrangement. It consists of a peculiar process of transferring photographic pictures to stone. By this means a page of illustrations can be produced as soon as the same amount of type can be set up. A noteworthy instance of the quickness with which illustrations are procured and published by the *Graphic* process occurred a few months ago. At 9 o'clock in the morning the death of Thurlow Weed, the distinguished politician and journalist, was announced. At 12 o'clock the *Graphic* appeared on the street with a fine, life-like picture of Mr. Weed, the plate of which was prepared between the hours of 9 and 12 on the day of Mr. Weed's death.

The illustrations of the *Graphic* are both local and general, serious and comic. Some of them are reproductions of those in foreign and domestic art journals. In all cases the reproduction is so perfect as to preserve the character of the original, whether it be a cheap illustration or a fine steel engraving.

In point of policy the *Graphic* is thoroughly independent. It claims to serve no interests but those of the public. It is ably conducted and each year of its existence adds to its popularity.

Since the writing of the foregoing, William Hinckley, formerly proprietor of the *Press and Telegraph*, of Poughkeepsie, N. Y., purchased a controlling interest in the *Graphic Company* and took immediate possession of the paper.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

A Revolution in Stylographic Pens. The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot,
Each sheet is water-marked with name and date.

Correspondence.

LIGHT FROM LOUISVILLE.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., September 14, 1883.

The drought in most parts of Kentucky and adjacent sections of Indiana, has now prevailed for over six weeks and the ground is thoroughly dried and baked. The effect has been to dry up the pastures and check the growth of garden vegetables; all late plants are stunted and tobacco is ripening prematurely. It is not too late to change the aspect of affairs if good soaking rains should come within the next week; but without early rain all of the late corn will fail to develop grain on the cob—and the crop will be farther materially shortened. While heavy rains would benefit the corn crop and grass, and enable farmers to prepare the ground for wheat sowing, such weather would delay the cutting and curing of tobacco, and also damage the now ripening leaf. The extent of injury to these crops cannot now be estimated, as the immediate future course of the weather must determine whether the injury by the drought is permanent or partly remediable. There has been no damage whatever from frost in this State, reports to the contrary being sensational and without foundation. The earlier crops, except wheat, were good.

General business here is excellent. The fall jobbing trade opened early and is unusually brisk; more country merchants are visiting the city and making personal selections of stocks than ever before, and many houses have found it necessary to call in their salesmen from the road, needing them at home to wait on customers in the house. The retail trade is improving daily.

The Southern Exposition is the huge factor in everything here this season, and it is simply an emphatic and complete success in itself as well as in its influences. The attendance was hardly as large as desired for two or three weeks following the opening, but this was due to the backwardness of exhibitors in arranging their displays. Now that everything has been placed in a finished state, visitors are flocking from far and near and an attendance of less than 15,000 is termed a dull day. In my next letter I shall review some of the many features and exhibits of interest to your readers.

The school-book trade was good with the wholesalers, but retailers complain that so many dealers in other lines laid in stocks that the sales were badly cut and very little money was made.

The stationery trade is first-class, owing to the

large transient custom derived from Exposition visitors. Printers, blank-book manufacturers and paper-box makers report uninterrupted activity.

The *Sunday Argus* has been purchased by Colonel George Baber and M. J. Burke; the price paid is reported to be \$5,000.

Forrester & Jobson, printers and stationers, have dissolved partnership; W. P. Jobson assuming the old business and continuing alone.

Isenberg Brothers have renovated the mill recently bought of the Brannon-Justi Paper Company, and claim to be turning out an excellent product of manilla wrapping.

Louisville is a very lively and a very attractive place now, so all the traveling men say, and they are thus inclined to prolong their stays here. The days are warm and the nights cool. All that is needed is a twenty-four hours' pelting rain to settle the dust in the back streets and revive the crops in the back counties. I trust we shall have had big showers before this appears in *THE STATIONER*; but at present all is clear and dry at the falls of the Ohio. BOURBON.

DOWN ON THE OHIO.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 17, 1883.

The good time coming is almost here. That is the way it looks at the present moment. A good prospect for a fall trade is fairly in view. The exposition is making local trade brisk. Every day of forbearance of the frost improves the outlook for safety to the crops. The corn is already clear out of danger, and so is the tobacco. There has been a drought that tells unfavorably on the pastures in this blue grass region. But, on the whole, the fields have yielded bountifully, and complaint under the circumstances would be ingratitude.

John Holland has returned from his Eastern trip all the better for it. He has a new fountain pen on the market, but is pushing the old reliable standard gold pen which has made his name a household word.

Charles Stewart has been making a tour of the East.

Coming to the paper trade, there has been a rise in the price of wrapping paper.

Louis Snider's Sons have the addition to their warerooms on Walnut street in good shape. It gives them a double front and makes a most decided improvement in the appearance of things.

W. B. Carpenter & Co. are going to enlarge their building by the addition of a couple of stories.

George Stevens has suffered nearly all sum-

mer the inconvenience of a street ripped open for a sewer on one side of his business house and a sidewalk blockaded for a new building on the other.

Robert Clarke & Co. are doing a good fall business in the sale of books, besides having a full hand of orders for the benefit of their manufacturing department.

The Exposition is giving the Globe Files Company a rush of business. It is a well advertised concern in every respect, and is able to bear out on the merit of its products everything ascribed to them in the way of commercial praise.

McDonald & Erick are doing wonders in job printing that go far toward relieving Cincinnati of the stigma of occupying the background in this department of industrial art.

The *Week*, Percy Proctor's new weekly illustrated paper, proves a success artistically and financially from the very outset. Each number has been a vast improvement on its immediate predecessor.

Peter Thompson is pushing his publications, and means to turn out a line of chromo toy-books the present season that will astound the oldest inhabitant.

Russell & Morgan are in their immense new building on Locke street, and are prepared to carry the war into Africa in the manufacture of playing-cards if the exigencies of the case require such a measure. They are equipped and panoplied for a conflict.

That splendid new building for the Strobridge Lithographing Company, on Canal street, between Race and Elm, is approaching completion, and will be one of the ornaments of the city. A better aired and lighted and a better appointed building for the purpose it would be hard to find elsewhere on the continent.

Van Antwerp, Bragg & Co. have such a run on their school books as to give their facilities full employment. In their line of blank-blocks the appreciation of the trade is giving them a harvest of orders.

J. R. Mills & Co. have a solidly established trade in mercantile stationery, which puts them out of the range of little fluctuations which are felt by those who are building up or going down.

Wilstach, Baldwin & Co. are finding the South, which they occupied early, an ever expanding field for their trade.

Snider & Hoole—well of course, Snider & Hoole are driving things. Nothing else is supposable of that firm.

C. F. Bradley has on hand about all his presses can turn off with business-like promptness.

A. H. Pounsford & Co., with their almost infinitely varied stock of fancy goods, and their

immense line of mercantile stationery, are keeping up with the times and with almost every demand of their customers.

T. C. Woodrow keeps his bazaar-like shop as bright and as free from monotony as ever, and back of it in the factory his presses are clattering like mad.

Reports from all quarters agree that collections are improving vastly and that the omens are good for a healthy fall and winter trade.

PRINCE WILLIAM.

OUTINGS IN CANADA.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., September 14, 1883.

On the 14th of last month I shipped on board one of the Richelieu and Ontario steamers at this port for Montreal. The distance is over three hundred miles, and for variety—to wit, the broad expanse of our grand Lake Ontario, the Thousand Islands, and the various rapids, through some of which you shoot like an arrow—makes the latter part of the trip a continuous scene of excitement and delight. We had a crowd, mostly of Americans from almost every State of the Union, the larger proportion from the South. As usually happens in trips of any extent, acquaintances are quickly formed, and in a few hours I found myself on friendly terms with ladies and gentlemen from New Orleans, Kentucky, Alabama, Tennessee, &c. I presume much of the interest taken in me was from the fact, which gradually developed from repeated questions, that I was quite in advance on their guide-books. Many years' travel up and down has made it an old story, but one that is always new and pleasing. I have been far and wide, and I do not hesitate to say that a run from Kingston at the foot of Lake Ontario to Montreal is the finest thing in America. The weather was all that could be desired, but you know what the wise man said about the dead fly in the ointment, which caused it to stink. These dead flies somehow or another seem to have a happy facility of finding a sepulchre in the pleasures of this world, but when they dump themselves into the various dishes and compounds that emanate in the culinary department, it goes against the grain of the ordinary American, whether he be Yankee or Canuck. There is a French proverb, "A bon appetit il ne faut point de sauce," which is true, as a rule, but I doubt if an ostrich, which is said to have a strong digestive organization and does not object to iron scraps and so forth, would have struggled through the menu. The table linen was filthy, the attendance wretched, the cooking abominable, and the charges were enormous. I am sorry to say this, for the route is a popular one, and I regretted to see the change. If there is not an alternative another season, those who know of it will either take a basket of prog with them or score the trip out.

We reached Montreal at 6:30 P. M., after a delightful run down the Lachine, which are the grandest and most imposing of all the rapids. I was much amused with a number of our southern lady friends, who had posted themselves about Baptiste, the Indian pilot, who was to come on board in Indian costume, feathers and all, of whom they had portraits, and when a sturdy Frenchman stepped into the wheel-house, pulled off his coat and took the wheel they were disgusted. However, the excitement of the run soon absorbed all of their attention, and a few minutes later we were at

the dock, and soon after rattling away to our hotels.

My quarters for a long time have been at the St. Lawrence Hall, and I found mine host, Mr. Hogan, although with nearly four hundred people to look after, as genial and active as ever. Among the first commis voyageurs, I ran against Wm. W. King, of Collins, Sons & Co. and J. Macdonald, of John Walker & Co., London, England. Both have finished their work and report satisfactorily results. The former comes to this city for his vacation and the latter is on his way home. Here, too, I came first in contact with Messrs. Farran and Swayne, of whom I made mention in my last. This is Mr. Farran's first visit to America, and Mr. Swayne is accompanying him as his cicerone, and he could not have fallen in much better hands.

I found business rather quiet in Montreal, except the hotels; these were full and running over with tourists. Most of the leading dealers have only recently returned from the Gulf and other summer resorts, and were not fairly in harness. The impression seemed to be that a fair amount of business would be done. Large buyers of paper stock are holding off with the idea that the bottom has not been reached, and that a further decline may be looked for. One thing is certain, that paper makers are quoting at very low figures, and that any number of their representatives have canvassed the trade.

The Toronto Paper Company is pushing its goods pretty thoroughly into the market. I. B. Rolland & Fils will have their mill at St. Jerome, P. Q., in full blast at the end of this month. They will commence with fine qualities of news and book.

Macfarlane, Austin & Robertson, Buntin, Boyd & Co., Robert Miller & Son, and Morton, Phillips & Bulmer, are all pushing on. You seldom hear much grumbling from any one of these firms about trade.

The old firm of Dawson Brothers has moved its book store farther west, and has now much more commodious premises.

Bennet & Co. have taken the adjoining building, which gives them four additional large flats. They are getting out a 200-page illustrated catalogue on the same plan as Perry's, of London, England, and are open to insert a few woodcuts from other houses which wish to take this advantage for advertising.

I do not forget that you have a correspondent in Montreal, an old and esteemed friend, a very modest person, and I am sorry that he does not give you a stave often. No one could do it better, but I know he has little time to devote to this sort of thing. All the same, I prefer that he should enlighten you about their trade, and I trust that he will not object to my mere mention.

I proceeded to Ottawa by the Canada Pacific Railroad. This city being out of the route of summer tourists, and it is a pity, for there is something of interest to see there—is somewhat dull in summer. I was somewhat surprised to find on the following morning the names of my friends Farran and Swayne, on the register. The former told me that he could not spare time to go. However, here they were, and as the parties I had come to see were out of town, we joined to see the sights. Of course, the Parliament buildings, with the splendid outlook from the grounds, the Chaudère Falls, big Saw Mills, &c., were well inspected, and Mr. Farran thanked me for suggesting the visit, and said that he would not have missed it for anything. We came out to Brockville together, where I left them to take the boat in the morning for

Toronto, so that they could see the Thousand Islands.

Now, after all this ramble we come back to our own good town, which, I am free to confess, is not up to the poetic expression, "See Naples and die." This is altogether too too for us, and I offer an improvement for future generations on that well-known quotation—"See Toronto and live." We are thoroughly alive to that principle of humanity—of holding on as long as we possibly can, and we think we have something to hold on for.

I have got away beyond my limits and must apologize, but I wish to add that our Industrial Exhibition is now in progress, and you won't get your back up should I follow next week with something about that and what I saw there.

C. H.

BRILLIANT GREEN OR GOLDEN COATING ON BRASS.

A process for obtaining a lustrous golden-green or iridescent coating on brass goods was lately given in *Dingler's Journal* as follows: Dissolve 5 parts (by weight) of caustic soda and 4 parts of milk sugar in 100 parts of water. Maintain the solution boiling for about a quarter of an hour, then remove the vessel containing the dark-yellow solution from the fire, and add, with constant stirring, 4 parts of a cold, saturated solution of sulphate of copper. When the solution has cooled off to about 165° Fahr., and the precipitate sub-oxide of copper has settled, the cleansed and polished articles of brass are immersed in it. In about two minutes the gold color which develops will be found to be sufficiently dark, when the articles are to be removed, well washed and dried in sawdust. If the articles are allowed to remain a longer time in the bath, the coloration will become first yellowish, then greenish, and finally the well-known iridescence will make its appearance. To obtain uniformity of coloration, it is necessary to maintain the temperature of the bath between 140° Fahr. and 165° Fahr. This bath may be used again and again, and should be preserved in a well stoppered flask. After it shows signs of becoming spent, it may be regenerated by the addition of 1 part of caustic soda, adding sufficient water to make up for that lost by evaporation, heating to boiling and adding 1.5 parts of sulphate of copper solution. Instead of milk sugar, glycerine or bitartrate of soda may be used; but it is difficult to obtain uniform colors with these, as they reduce the copper solution too energetically.

An important communication has been sent to the British Chamber of Commerce by the French Minister of Commerce, interpreting Article V. of the Patent and Trade Marks Convention signed at Paris by the representatives of a number of states last March. He states that, so far as the subjects of the contracting states are concerned, the importation into France by a subject of one of those states of objects similar to those under the protected French patent and manufactured in any one of the countries of the union will not entail forfeiture of the patent. No ministerial permission would be required for the introduction, but the patentee would remain under the obligation to work under penalty of forfeiture his patent in France, according to the conditions laid down by the law of 1844.

When the sun of virtue is set, the blush of shame is the twilight. When that dies, all is darkness.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

Being Triplet Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIER, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORs are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884.** This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

CAUTION.—An inferior line of Gold Pens and Pencil Cases are being offered on the market, bearing the name of a dealer which resembles my stamp, I therefore beg to advise my customers when ordering to inquire if the salesman represents LEROY W. FAIRCHILD.

The reputation of the LEROY W. FAIRCHILD GOLD PENS have been sustained for over thirty years. Their superior qualities are acknowledged throughout the world, and they are to-day without noteworthy competition.

My New Illustrated Catalogue and Price-List combined (ready September 15), will represent New Designs in Pencases, and an exceedingly large line of Fine Novelties in Charm Pencils, &c.

Every article being made at my Factories enables me to offer the very best advantages.

Leroy W. Fairchild.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW TOYS AND GAMES.

Among the many new ideas in the line of toys and games which the well-known house of Milton Bradley & Co., Springfield, Mass., has ready for the approaching season of juvenile delights are several designed for instruction as well as amusement. Another feature for consideration is that the goods are not dear and are therefore salable, not only on their merits, but as comparatively inexpensive means of affording gratification.

"Double Five" is a neat and simple puzzle, with ten checkers arranged in a circle.

The "Pythagoras Blocks" are a mathematical puzzle, involving primarily the forty-seventh problem in Euclid relating to the squares of the sides and hypotenuse of a right-angled triangle.

"Queer Heads and Odd Bodies", are made from a combination of wonderfully funny pieces of heavy card board, printed in grotesque designs in colors, an unlimited fund of amusement for little folks.

"Funny Picture and Letter Blocks" present in a different form similar figures, which are combined by piling up the blocks. This is a very valuable set of blocks for little money.

The game of "I Don't Know," combines many questions on familiar subjects, which the progress of the game answers. The question cards are in colors and form a very pleasing set of picture cards. The game is simple and lively, being played somewhat after the method of "Old Maid."

This house has this season a very fine line of cube blocks, combining alphabets and pictures, with a great number of color surfaces, presenting a variety of shades, of great value in educating the eye to discriminate between the various colors in nature and art. These, with the line of "Kindergarten Alphabet and Building Blocks," so popular last season; the "Mother Goose Cubes," the "Funny Blocks" and the flat

blocks in album boxes, form a very complete line—all at the most reasonable prices.

BRONZE ART PIECES.

Herewith are given illustrations of a new line of goods, which come in bronze or other metal, and are designed for decoration or interior ornament. The designs shown sufficiently indicate the character of the goods, and their pleasing features will be understood when it is known that they are made in pure bronze metal or in antique brass or copper, richly mounted with

BRONZE ART PIECES.

silk plush and oxidized frames. These art-pieces are made by the National Papeterie Company, Springfield, Mass.

NEW PATENTS.

No. 281,484. Engraving Machine.—Richard Friebe, Leipsic-Reudnitz, assignor to Emil Berger, Reudnitz, near Leipsic, Germany.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

IN answer to frequent inquiry made about our Novelties, we will furnish a

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. Logan, publisher, Waverly, Ohio, has sold out.

Martin Lutz, paper-hanger, Philadelphia, Pa., is dead.

E. T. King, paper manufacturer, Saratoga, Cal., is dead.

H. N. Mather, paper manufacturer, Allegan, Mich., has sold out.

T. W. Bentley, publisher, Staunton, Ill., is closing out his business.

E. Hunt, of the firm of Hunt, Elliot & Co., printers, Attleboro, Mass., is dead.

J. T. Festner has retired from the firm of F. C. Festner & Son, printers, Omaha, Neb.

Everett A. Rice, paper-box manufacturer, Clinton, Mass., has sold out to Howard P. Reed.

The Dennison Paper Manufacturing Company, Mechanics Falls, Me., has been attached for \$8,000.

E. L. Marshall, manufacturer of tooth-picks, &c., formerly of Cleveland, Ohio, has removed to Harbor Springs, Mich.

Milton Jennings, of the firm of Jennings & Co., publishers of the *New Republic*, Wichita, Kan., died a few days ago.

Forrester & Jobson, printers, Louisville, Ky., have dissolved partnership. The business will be continued by N. P. Jobson.

A company, called the J. E. Lawton Printing Company, has been incorporated at St. Louis, Mo. Its capital stock is \$20,000.

The limited partnership of the firm of George S. Wilcox, printer, New York city, has been dissolved, the special partner retiring.

There has been a dissolution of partnership in the firm of Miller, Pierce & Co., printers, Boston, Mass. The business will be continued by W. H. Pierce.

The firm of J. E. Lawton & Co., composing the Mound City Printing Company, St. Louis, Mo., has been dissolved. J. A. J. Schultz succeeds the old firm.

William L. Godfrey & Schaefer, manufacturers of pearl and ivory woods, New York city, have dissolved partnership; William L. Godfrey continues the business.

An article called the stenograph, a short-hand writing machine, has lately appeared on the market. It is claimed for the stenograph that it has all of the advantages of the best systems of short-hand, including speed, brevity, legibility, &c.

The Kerner Stylographic Pen Company is said to be doing a brisk business in the manufacture and sale of its pens, which it receives orders for from every part of the country. No better evidence of the usefulness of the Kerner pen could be given than its large and increasing sale.

Owing to the death of Emil H. Bisler, late member of the firm of Bisler Brothers, paper-box manufacturers, Philadelphia, Pa., that firm has been dissolved. The business will be carried on by Gustav A. Bisler and Ernest Thaley, under the style of G. A. Bisler & Co.

The large Eastern envelope manufacturers have given notice this week of an average advance in prices of from 10 to 20 per cent., and although there has yet been no concerted action to this end, this will undoubtedly be followed by all the others in the course of a few days, a revision of price-lists is now being made and will be issued to the trade when completed. It is claimed that the manufacturers have been compelled to do this in self-defense, as owing to the sharp competition, goods in many cases have been actually sold below their cost. A meeting of the Eastern manufacturers was held at Springfield on Tuesday, and the result of their action has not been made known, other than that of the advance noted.

The question of samples has become a serious one for the manufacturers of chromo cards. T. Sinclair & Son, Philadelphia, have been obliged to refuse many who ask for samples, as a hundred demands were coming to them daily. They have decided to supply samples to jobbers, who desire to examine their goods with a view to purchase, and charge them \$3, which amount will be deducted from the first bill of \$50, and the same will be furnished, without price-list to any legitimate dealer or advertiser, who will at the same time be furnished with a printed list of regular wholesale dealers, from whom prices can be obtained.

John S. Cole, surviving partner of Roby & Cole, cardboard dealers, at No. 28 Beekman street, made an assignment on September 14, to John M. Reed, without preference. He has been in business eleven years, and E. N. Roby died June 30 last. The firm had a factory at No. 29 Monroe street, but it was burned out about a year ago, the loss being reported at \$40,000 over an insurance of \$16,000. Mr. Cole states that no schedule of assets or liabilities has yet been made and he cannot, himself, tell how his affairs are at present situated.

J. E. Linde, New York, has just published nine new series of chromo cards, embracing twenty-five designs, all of which are of good taste and execution. These include winter landscapes, marine views, and figure designs of a graceful character and delicate coloring, and likely to attract attention.

Attention is invited to the new advertisement in this issue of the well-known house of Charles J. Cohen, Philadelphia. Mr. Cohen sends a copy of a neatly-printed list just issued to the trade, showing some of the styles of fancy goods carried by the firm this year.

W. H. Lyman, of H. McAllister & Co., Chicago, card jobbers, has made arrangements to act as exclusive Chicago agent for T. Sinclair & Son, Philadelphia, who are working night and day to keep up with orders.

William H. B. Stewart, for a long time in the employ of Turner & Harrison, manufacturers of steel pens, is now on the road with the samples of that firm. He will visit all of the large cities of the West.

T. M. Thayer, president of the Evansville Journal Company, Evansville, Ind., has sold his interest in the business to James H. McNeely.

Looker & Quaas, dealers in paper-hangings, Newark, N. J., have dissolved partnership. Mr. Quaas continues the business.

W. F. Lambdin & Co., manufacturers of passe-partouts, Chicago, Ill., have sold out to W. W. Abbott.

Charles F. Barrett, publisher of the *Greenleaf Journal*, Greenleaf, Kan., has sold out.

William Pemberton, printer, Uxbridge, Ont., has been burned out.

Stephen P. Pratt, Woodstock, Vt., wants to buy a book and stationery store.

William A. Slocum, publisher, Oakland, Cal., has applied for relief in insolvency.

B. F. Ripple, printer and publisher of *The Despatch*, Orbisonia, Pa., has sold out.

Charles B. Bovier, paper-box manufacturer, Elmira, N. Y., has sold out his business.

The Canada Pulp Company (incorporated), Montreal, P. Q., is closing out its business.

Cook & Jackson, publishers, Lakeport, Cal., were burned out a few days ago; partly insured.

E. Darrow & Co., Rochester, N. Y., have just made a reissue of "Summer Vacation Abroad," by the Rev. F. De W. Ward, D.D.

George Davis, the managing clerk of the firm of J. G. Bufford's Sons, has been for several days in Canada on business connected with his firm.

An attachment has been placed on the property of Alden Sprague & Son, publishers of the *Kennebec Journal*, Augusta, Me., to recover \$10,000.

Edward Todd & Co. report a lively trade in gold pen and pencils and "Paragon" fountain pens. They have all that they can do to fill orders.

Schmeer & Listman, paper-box manufacturers, Syracuse, N. Y., have dissolved partnership. Jacob Listman will settle and continue the business of the late firm.

The Pneumatic copying press is quick and easy in its operation. It is a convenient letter-press for offices and stores and for use in the library. It does require a stand. Frank H. Snell, 628 Broadway, New York, has the agency for the press.

Wilkins & Adey, booksellers and stationers, Houston, Tex., have forwarded to THE STATIONER a miniature bale of cotton, presumably a sample of the first of this year's crop. The wrapper is of crimson satin and cotton "ties" in miniature, encompass the bale. It is a handsome little souvenir, and bears the compliments of the senders in gold on one side.

Henry Levy & Son, 477 Broadway, have just received a handsome line of Venetian glassware, mounted on fire gilt brass frames, among which may be specially noticed two liquor-stands, one of which is pyramidal in form. The liquor glasses hanging on each side, from cone to base, give a most artistic effect to its general appearance. This house is daily opening new goods for the fall and holiday trade.

A novelty in the stationery line is a device for holding a book open. It is made of a small bar of steel, to which is fastened a small strip of metal, which is bent around the bar, forming a circle. The end of the strip of metal is bent straight and projects at right angles from the bar of steel. A small opening between it and the bar forms a slit between which the leaves and cover of a book may be placed and held together.

Marcus Ward & Co. have just issued two companion volumes to the popular Scripture text-book "Forget Me Not." The new books are called "Bible Heart's-Ease" and "Golden Grains." Both volumes are 48mo. in size, and embrace thirty-one pages with selections of scriptural texts for each morning and evening of the month, compiled by Rev. J. R. MacDuff, D.D. The books are bound in richly and tastefully decorated cloth covers, and cannot fail to prove as popular as the preceding volume,

"Forget Me Not," of which 130,000 copies were sold.

Porter & Nye have bought out the publishing business of Del. Cobb, Silver City, N. M.

J. B. Lippincott & Co.'s September bulletin of new publications is ready for distribution.

An assignment has been made by Charles H. Baker, dealer in paper-hangings, Buffalo, N. Y.

The firm of Samuel B. Fay, manufacturer of tags, New York city, has been dissolved. A new firm has been formed under the style of Fay & Bardwell.

Campbell & Smith, New York, have got out a new design for fashionable paper. It is called "The Persian," and is water-marked in graceful yet fanciful patterns.

The Plimpton Manufacturing Company, Hartford, has issued a notice to its customers in which it says: "That during the past few months it has given its customers an opportunity to buy envelopes at about the cost of production, and that they have availed themselves of this opportunity to such an extent that it is pressed to fill orders. For the purpose of protecting its customers as well as themselves, it advances the prices of its goods and incloses a net list to take effect from September 15.

Thomas Kane & Co., Chicago, are offering a combined sponge-cup and pen-holder. It is, in form, an ordinary sponge-cup, to which a glass top, resembling a large stopper is adjusted. This top has openings to hold the pens vertically. The points of the pens rest in the wet sponge and are kept clean and free from corrosion. The pen is thus always in fit condition for use. It is an excellent thing with the stylographic pen, when the latter is used at the desk, keeping the point moist and ungummed. The sponge-cup is as available as any other.

The National Publishing Company, 728 Cherry street, Philadelphia, has just issued its fall catalogue of family bibles. It is finely painted and profusely illustrated, giving a clear description of the contents of each styles. Engravings are used to show the different designs of binding. It has added a large number of new and attractive styles, and has also revised its prices. Good paper, elegant printing and handsome engravings are the secret of the almost instantaneous success of this line of bibles, which although only in its first year of publication, is already favorably and widely known. Orders are being received from every section, and booksellers everywhere will find it largely to their advantage to send for the new catalogue and prices.

The Tower Manufacturing Company has added to its stock of novelties in stationery and fancy goods a new thing in inkstands. It consists of a handsome cut-glass bottle in holders finished in nickel, gold and bronze. Two birds, with wings extended, form an excellent pen rack as well as a novel piece of ornamentation, which cannot fail to please the fancy of buyers generally. The line of Christmas cards which

the Tower Manufacturing Company has brought out this season is as fine as can be found in the market. An assortment of fifty cards is packed in a neat box, thus making a very desirable collection for buyers who may not want a large quantity, but a sufficient variety to make their stock attractive.

The busy season for manufacturers of fancy plush goods is over, and an effort is being made in the direction of producing new designs for next season's trade. About one hundred different designs have been introduced to the trade during the present season. It is thought by some manufacturers that plush goods will be entirely dispensed with next year, as the trade have become rather tired of them, and that leather will take the place of plush in the manufacture of various fancy articles for the boudoir, dressing-case, &c. It is believed that the competition in the sale of these goods will not be so great for the reason that there are comparatively few workmen in this country who have the skill and experience to make fine leather goods.

Mr. Schimonsky, of the firm of Theo. Leonhardt & Sons, Philadelphia, states that they have just received from Paris a large invoice of artistic enameled plates which are the most perfect facsimiles of hand-painted china plates as yet introduced to the trade. As these are painted on metal, they are unbreakable, and have the advantage of not being affected by changes of temperature, as they do not warp and the colors will not fade. These plates, made by a new process, are as ornamental as china plaques, and cost a great deal less. The twelve samples received by Mr. Schimonsky are: Venetian Heads, Whipper-on and Hounds, Gamekeeper and Hounds, Florentine Noblemen, Florentine Lady, La Parisienne, the Stork's Pastime, the Coquette, and the Eastern Belle.

"Bombardment," a game and toy combined is a very attractive article. A fort with mounted gun and flying flag is attacked by a siege gun behind a redoubt. If the small marble from the spring siege cannon hits just the right spot inside of the fort the colors are run down and the white flag, indicating surrender, is hoisted. If other parts are hit, other smaller advantages are gained; but if instead of hitting the flag trip, the shot varies slightly, it may cause the discharge of the cannon in the fort, thereby indicating a loss to the attacking party.

As a simple toy, this is attractive and pleasing, but as a game it is quite exciting and decidedly novel. It is one of Milton Bradley & Co.'s latest devices.

The Powers Paper Company, John L. St. John, agent, has a line of writing desks which are remarkable for their cheapness, and are likely to be very salable.

*Henkels & Tripple, dealers in books, pictures, &c., Philadelphia, Pa., have dissolved partnership. The business will be done in the future under the style of Stan. V. Henkels & Co.

The J. W. Butler Company, of Chicago, Ill., which has for five years had a branch in Milwaukee, under the management of Charles S. Van Duyn, has been merged into a new organization, to be known as the Standard Paper Company of Milwaukee, which makes it distinctively a Milwaukee institution. The capital of the new company has been largely increased. The incorporators of the new company are as follows: The J. W. Butler Paper Company, by John T. Moore, president; W. O. Tyler, secretary; C. L. Blanchard, R. F. Arnold and C. S. Van Duyn. The capital stock is \$100,000.

The Climax blotting paper, made by the Richmond Paper Manufacturing Company, Richmond, Va., is extending its reputation. It is made full weight. As evidence of the estimation it has gained, the following from Alling & Corey, Rochester, N. Y., is quite satisfactory: "Enclosed please find our order for another lot of Climax blotting. That which we have had of you proves to be an excellent article, being soft, clean, and a splendid absorbent. It is as good as any we have ever used, to say the least, while some of our stationers who are using it pronounce it the best blotting they ever saw."

Some very bright and pleasing shape novelties have just been published by J. E. Linde, 165 William street. The coloring is gay and the figures are good. There are ten numbers, embracing the violin, harp, steamboat, row-boat, hammock, bicycle, carriage, balloon, gondola and poodle. The boat-shapes represent the different kinds of boats named, with passengers in gala attire. The hammock is a design of a lady swinging in a hammock. A very good shape-card is also shown in No. 223, which is a representation of Bartholdi's statue of "Liberty Enlightening the World."

PERFORATING MACHINERY.

"Perforating machines," said a manufacturer and dealer in these articles to a reporter of THE STATIONER, "are used for a great many purposes. Twenty years ago all perforating, or what was more commonly called 'pinking,' was done by hand, and it is only within the last ten years that the work has been done by machinery in this country. Prior to that all perforated goods in the more complicated and fanciful patterns were imported from England, but the demand for perforated goods and the high prices they brought stimulated American enterprise and inventive genius, and it was not very long before their manufacture in this country completely drove out the foreign article."

"Any progress been made in perforating machinery since their introduction?" the reporter asked, innocently.

"You might as well ask if there has been any progress in sewing-machines," the dealer replied with a broad but good humored grin. "Perforating-machines were first used to perforate card-board; now they are used for making fancy shelf paper, mottoes for framing, fancy uppers and tips for shoes, perforating bank checks, perforating the bottoms of tin dishes, and the latest use they have been put to is that of sifting and assorting shot in a shot-tower. We furnish machines with which any number of dies may be used. Each perforated pattern requires a die. The dies are supplied by us as they may be desired. We also get up designs for patterns. We have facilities for that kind of work, and if a customer comes to us and gives us any idea at all of what he wants, we rarely fail to satisfy him. Sometimes designs are brought to us, but generally customers have not the least idea of what they want, and when they see our patterns, take them in preference."

"Each perforation in a pattern requires a separate punch or needle. Some patterns have a hundred or two needles. The punches and needles are all made by hand. They have to be formed with the greatest regard for symmetry and uniformity, and adjusted with great care and skill. In the first place, the die is made and hardened. It is constructed of the hardest and finest steel. We then take and drill the punch plate and stripper to correspond to the pattern of the die. The die consists of a male and female die. The male die is made of a thin plate of steel, which holds the needles and punches. The punches pass through an intervening plate, called a 'stripper,' between which and the punch plate the material to be perforated passes. The punch plate has a number of female dies, whose position and number correspond to those of the punches and needles in the upper or male die. The punches pass through the 'stripper,' then through the material into the female die. After the perforation is made the article perforated is 'stripped' from the punches and needles by the intervening 'stripper' plate, when the needles and punches are ready to repeat the punching operation, the work having been pulled into position for another perforation by an automatic arrangement."

"In card-board, two rows of holes or perforations are made at a time, but the operation is so quick that 1,000 gross are turned out in a day by one machine. Before shelf-paper was perforated in this country, it sold as high as \$1.75 per gross. It can now be bought for twenty-two cents."

"Perforating machines are made to operate both by hand and steam power, and the facilities afforded to manufacturers in this country by their introduction has not only completely stopped the importation of perforated goods, but has reduced the price to such an extent that large quantities of the products of American manufacturers are now sent abroad."

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, SEPTEMBER 30, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

OUR market report indicates peculiarities in trade, which are rather remarkable. While some houses report satisfactory business, others are not so favored—according to their statement. This, too, in lines where there should be an even demand. It is only a matter of estimate.

IN THE STATIONER correspondence from Louisville and Cincinnati this week, there are assuring statements of the character of business in the section of country to which those cities contribute supplies. In default of different reports from other localities and in view of the fact that buyers from widely different sections have been in the market, it is only fair to assume that the same, or similar conditions of trade, exist elsewhere.

NEW YORK daily papers are laudably filled with love for their constituency, and are reducing the price of their issues. The *Times* has made the biggest jump and come down to two cents, or half of its former price. This may force the two-cent dailies down to one cent, if they would retain readers. We are curious to know what effect this will have on the *Herald*, which not long ago, following in the wake of the *World*, came down to three cents, and now finds that its trade is being "cut under." Are we on the eve of a newspaper battle?

THE report that the present Commissioner of Patents, Hon. E. M. Marble, contemplates resigning at an early day appears to take firmer consistency—that is, if we can trust the press reports. One of the most prominent candidates for the near vacancy is the Hon. R. G. Dyrenforth, the present Assistant Commissioner. Mr. Dyrenforth is an army officer who was wounded in the service, and entered the Patent Office at the close of the war. He at first occupied a subordinate position, from which he rose in succession through the different grades to his present position. One step more would therefore place him at the head of the office. He has very strong indorsement from many prominent men, and especially from those familiar with the practical working of the Patent Office and with its necessities. His claims are urged on the ground of personal and official merit, and his friends are sanguine that he will receive the appointment if the best interests of the Patent Office are to be subserved.

THE new British patent law is given in another column and we are indebted to an English contemporary for advance proofs of the text. On and after January 1, 1884, it will only cost £1 to secure a patent in Great Britain. The report of our own patent office shows that the fees received from patentees exceeded by half a million of dollars the cost of running that bureau during the last fiscal year. This shows that the government can afford to reduce the charge for granting a patent. Inasmuch as the fact that an inventor has secured a patent does not insure protection by the

government, and as there is no penal offense in stealing the fruits of invention, it seems to us that a simple registration of a claim with the specification of an invention should be sufficient. The courts could as well determine in such case, as they do now, what a man's claim to priority of invention really amounts to.

ROUNABOUTS.

BY THE TRADE LOUNGER.

Sauntering through the region of paper, envelopes, &c., the Lounger found many things to attract his attention. It was a by no means unprofitable tour, inasmuch as it led up to thoughts, some of which may develop in a different form than a paragraph.

* * * *

Watching the ascent of a lineman up a telegraph pole, it occurred to the Lounger that the diffusion of thought has been conducted on a higher plane than that of everyday life. But changes are going on, and now the telegraph is to be brought nearer the common level. The wires are going underground, and education is at the feet of all who will utilize it. The paper maker, stationer and book maker are linemen in the service of knowledge, and are bringing it nearer, day by day, to the mass of humanity.

* * * *

My reflections were somewhat distracted by the study of the envelope-making machine which I saw in operation in the window of a well-known firm. Some one may be unkind enough to suggest that the distraction was in the form of the good-looking girl who was engaged in "bossing" the machine; but this I deny. I tried not to look at her, and fixed my eyes and thoughts on the implement which was producing I don't know how many envelopes per minute.

* * * *

This machine was a study. It helped to make me understand why envelopes should be cheap, and how easily competition is attained. Perhaps I may be permitted to remark that the only dear thing about envelopes nowadays is the animate being who sits at the end of the machine. This remark is not to be taken amiss. I only make it in the sense which every married man and father of a daughter will appreciate. Costly!

* * * *

But while on the subject of envelopes, it is well to say that they are going up. Prices have certainly been low, and now that the supply of paper is getting reduced, the manufacturers of envelopes are likely to be required to pay more for their raw material. The consumer can assuredly afford to pay a little more.

* * * *

I observe that THE STATIONER takes a great deal of pains to answer the inquiries of its friends and subscribers. There is a great deal of useful and interesting reading to be found under the head of "Answers to Correspondents." But it is strange that so many things in the stationery line should not be advertised. Perhaps the owners of some lines of specialties want a quiet life.

* * * *

Some of your readers may want to know how about this. It is found in a little incident said to have occurred in a certain city. The story runs as follows:

* * * *

A nervous-looking man went into a store and sat down. After half an hour a clerk asked

if there was anything that could be done for him. He said "No." Half an hour later the owner of the said store made a like inquiry. The visitor said "No; I just want to sit around. My physician recommends perfect quiet and to avoid crowds, and noticing that you do not advertise in the papers, I thought that this was just the place to secure the needed isolation."

The above may not be true, but it gives a pretty good idea of how dull trade can be where the merchant lacks enterprise, and fails to let people know where he is to be found and what he has to offer.

Some of the daily papers, I see, have been reducing their prices, the *Times* to two cents and the *Tribune* to three. Both are animated by desire for the public welfare. One proceeds on the theory that its readers are partners in the concern; the other thinks that the great reduction in the price of paper ought to cheapen the news. Well, they are both right. It seems to me, however, that they have been slow in getting 'round to conviction, and the junior partnership in both cases has been a long time in abeyance.

There is one house down town where trade must be very dull. At least, I am led to this impression when I see the clerks standing around and grinning at visitors as they come in at the door. The gentlemanly salesmen in this house have been remarkable in the past for their indifference to customers and they don't improve a bit.

There is to be a base-ball this week—I mean match. The New York paper trade men are going to try and let the Baltimore ditto get away with them. Now, the lads in the stationery nine will have a chance to feel good, bad or indifferent, as they please. What do they care about the New York nine?

Quite a failure reported this week. I am sorry to note it, but if you will observe, it is of a house that rarely advertised. Are there others in the same category?

Very little fun in the trade this week. Some of the people I have met are as solemn and grave as lord chancellors. Others, I suspect, are just a "wee bit" mad.

There's really nothing to get mad about. Remember the little verse: "Let not your angry passions rise." Perhaps when next I go the rounds I will ask the boys to recite it. For the present I leave you. Is it a relief?

ANSWERS TO CORRESPONDENTS.

S. C. W. wants to know where to get "Sea Island" twines, assorted colors.

Ans.—Johnson & Co., 3 Lispenard street, New York, and Travers Brothers, 107 Duane street, New York.

R. Brothers want address of maker of stitching machine mentioned in *THE STATIONER* of August 2.

Ans.—It can be had of Augustus H. Tennis, 26 Union square, New York.

SUBSCRIBER asks: 1. Where are ivory goods, such as are quoted on — and other lists, made? 2. Where can we obtain Phillips' tape? 3. Are clips 3,003 now made? 4. Where are cheap triangular scales for school purposes made?

Ans.—1. F. Grote, 114 East Fourteenth street, New York; Edward Kelsey, Centrebrook, Conn.; Cheney & Comstock Company, Ivoryton, Conn.; Totans & Schmidt, 89 Fulton street, New York,

and a number of others. 2. Don't know. 3. We cannot say. 4. Keuffel & Esser, 127 Fulton street, New York.

H. T. C. requests address of parties who make paper board in imitation of veneers.

Ans.—A straw paper board in imitation of different hardwoods is made by the Hamilton Straw Lumber Manufacturing Company, of Lawrence, Kan., and having a New York office at 11 Temple Court.

M. & W. inquire for the maker of the automatic numbering machine, described on page 414 current volume of *THE STATIONER*.

Ans.—Nils F. Olson, Chicago, Ill.

P. & B. want address of firms making a specialty of getting up calendars.

Ans.—L. Prang & Co., Boston and New York; Marcus Ward & Co., New York and London; John Cussons, Glen Allen, Va.; M. J. Anderson, 117 Fulton street, New York; E. P. Coby & Co., 95 William street. There is a host of others, but these will do for the present.

M. A. S. sends through us an order to the North Star Mills, and asks us to forward it.

Ans.—We don't know any North Star Mills. Your sample resembles a Holyoke make of paper. We will try and locate the manufacturer and place your order.

-----------------------------------	-------

The following named gentlemen from out-of-town sections were reported in town during the past week: F. F. Hansell, New Orleans, La.; Mr. Drew, representing the firm of Robert Bell, Washington, D. C.; C. W. Yates, Wilmington, N. C.; Charles Shinkle, of the firm of Meyers, Shinkle & Co., Pittsburg; John Hox, Baldwinville, N. Y.; Mr. Ogden, of Ogden Brothers & Rule, Knoxville, Tenn.; Isaac Hammond, Charleston, S. C.; W. A. Jobe, Columbus, Miss.; Richard Fox, Allegheny, Pa.; Mr. Strohan,

Winfield, Kan.; Mr. Lyford, Quincy, Ill.; Mr. Tiffany, Hartford, Pa., and Mr. Gibbs, of E. C. Palmer & Co., New Orleans.

The first number of the *American Journalist* has just been issued. It is what may be called a "trade paper," devoted to the interests of the journalistic profession, and notwithstanding the progress of journalism in this country, is the first of its class that has appeared. The first number contains portraits of a number of distinguished journalists, with biographical sketches and other matter of interest to journalists. The paper has a handsome typographical appearance and is well edited.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, September 19, 1883.

THE MONEY MARKET.—The money market continues to be liberally supplied with loanable funds for this period of the year, and rates on acceptable collateral remain comparatively low, viz.: $5\frac{1}{2}\%$ on prime mercantile notes and acceptances, and $2\frac{1}{2}\%$ on call. In view of prospective disbursements by the Treasury and an important movement of gold, it is not unreasonable to expect that the money market will work more smoothly than usual during the fall and winter months. The temper of the share market is inclined to be bullish, though there is still a conspicuous absence of outside buyers necessary to give to prices a decided upward movement. Sterling exchange is in light supply and rates have been advanced a fraction, though the demand is not active. Continental exchange is steady. Government and railroad bonds are advancing.

THE PAPER MARKET.—While there is no excessive activity in any line of general business, there has been a very steady and gradual enlargement of the volume of trade since the beginning of this month, and what is quite gratifying in this connection is the fact that business is being conducted on a very conservative and healthy basis. There is a marked absence of speculative features, with cautiousness as to credits. With this and buyers, as a general thing, paying promptly for their purchases, there cannot fail to be good results. The drought, which is the most important feature of interest in the paper trade at present, has given such an impetus to the demand from large consumers that many of the manufacturers show anxiety lest they may be made to make deliveries within the time desired by the parties ordering, and owing to the uncertain duration of the dry weather, some have been unwilling to contract much ahead. As regards prices there is a firmer condition of the market than we have seen for a long time past, and if the production is restricted much longer, print papers and other grades dependent mainly on water-power for their production must take an upward turn in value. The impression holds to some extent in the trade that we are on the eve of a general advance in prices for all grades, with possibly one or two exceptions.

THE STATIONERY MARKET.—It is hard to describe the condition of trade during the past week. The market is far from being active or uniform. Some dealers are doing a good business, while others assert that they are not doing much above the average. This condition of affairs leads many to believe that the full volume of fall business has not yet set in, and that the best is to come. This phase characterizes the trade in staple goods generally. The demand for books is quite brisk, and for toys is quite fair. The commercial travelers of leading firms are sending in many orders. A slight advance in prices has taken place in envelopes which, it is thought, will tend to increase business, because it may lead buyers to think that there will be another advance and hence hasten their orders. The sales of gold pens show considerable improvement. Men on the road are doing exceedingly well, and dealers have as much as they can do to fill orders. A fair trade is being done in blank-books, diaries, &c., but considerable improvement is looked for.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BANKRUPTCY LAWS.

The time when State laws should be applied to the general business of the country has passed. The railroad, the telegraph and the modern methods of trade have long since outgrown the boundaries of States. Consequently, when each State undertakes to legislate regarding commercial matters which affect the whole country, trade is not only hampered, but great injustice is certain to be done to the residents of different parts of the country. Already the revolution in business caused by the agencies to which we have referred, has made it necessary that the Federal courts be opened to suitors who would otherwise be without a full remedy in law. At an earlier period in the history of the country State banking laws answered the demands of trade, which was largely restricted to State limits, but now that rapid transit has brought San Francisco nearer to New York, when measured by time, than was Buffalo fifty years ago, a national banking system is demanded by a commerce which has become national. For the same reason the important matter of bankruptcy should be subject to national legislation and the Federal courts. Indeed, the framers of the Federal Constitution, who could have had no intimation of the new forces of civilization which were to give the commerce of the country a national scope, saw the necessity of conferring upon the Federal Government the power "to establish uniform laws on the subject of bankruptcies." If such power was deemed important at a time when States were all jealous of their sovereignty, and when trade was mainly confined within State limits, the exercise of that power is of the utmost importance at the present time, when the small trader in the most remote hamlet buys of and sells to men living in other States. Nevertheless, this nation of fifty-five million people, which has a larger traffic among themselves than any similar number of people in the world, is without any general laws for the protection either of creditors or insolvent debtors. So far as there are bankruptcy laws, each State has its own; and nothing like uniformity exists either in their provisions or their administration. In some States the unfortunate debtor is at the mercy of the first creditor who may pounce upon him, who can secure his own claim, leave nothing for the other creditors, and put the debtor in a place where he cannot again engage in business. This state of things is a great detriment to business and it should not be permitted to continue. With the light that has been shed upon this question, the next Congress should be able to perfect a measure which will ensure something like justice to both the creditor and the debtor interests.

The British Parliament during its recent session enacted a new bankruptcy act which it is thought will reconcile conflicting interests, do justice to the debtor and creditor classes, and come nearer to what is wanted than any act which has yet been passed. The English laws of 1849 and 1861 established the court system of dealing with bankrupts; the law of 1869, which is still in force, makes shrewd creditors powerful; the act of August 15, 1883, is a compromise, and gives the Board of Trade, or ministry of commerce, a voice in bankruptcy proceedings. The Board of Trade will attend to the administrative part of the proceedings, on the implied theory that a case of bankruptcy touches society at large, and should be treated with a view to public policy. The new act appears to excel in the arrangement under which insolvent estates are required to meet the interests of public as

well as private equity. It implies that a solvent business man cannot do with his property and credit as he pleases, and that a bankrupt estate is not the sole property of the creditors, who may do as they prefer. It is a fair presumption that under the new act business men will not court a release from indebtedness by a cheap compromise or a cheaper collapse. The new act will not go into effect until January 1, 1884.—
Shipping List.

NEW FANCIES IN GEMS.

The fancy for Oriental and India styles has reached to jewelry. The newest gold made into jewelry is now finished in the rough, as if it had been taken from the melting pot, and the diamonds, emeralds and rubies sunk in the metal in any careless fashion. The most exquisite skill and careful study of detail are necessary to properly finish this apparently unfinished jewelry. Eastern designs and tropical flowers half an inch in size are chose for patterns to some new ornaments. The pomegranate flower, with dark enameled leaves and a magnificent yellow diamond in the centre, is one pattern for a handsome pin. Ladies' pins continue to be chosen in long, slender, lace-pin style. A long Pompeian vase in unfinished gold, with diamond and rubies sunk in it, is one pat-

tern. When gold earrings are worn they are in small-sized ball shape, fastened close to the ear, or in large hoop style. Bracelets are now preferred in pliable linked style. Two bracelets are generally chosen in different size and style. One bracelet may be in plain, linked squares of Etruscan gold, while the other bracelet is composed of squares of yellowish gold, set with turquoise. All jewels are now sunk in the gold in gypsy style. An exquisite necklace, copied from one owned by Catharine of Medici, is shown in old Venetian enamel, set with long pearls and ending in a miniature of the Queen in the full ruff and curved necklace of her time. A remarkable necklace recently made consisted of twenty-one exquisite chrysoberyls, which ranged in size from two to twenty carats each. These handsome stones shaded in color from a rich yellow to brownish-yellow and brownish-green, a tint like raw sienna running through all of them. They were mounted in rich Etruscan gold. The chrysoberyl ranks next among gems to the sapphire in hardness, and is clear stone like the sapphire. There are semi opaque varieties of chrysoberyls, which are known as cat's eyes, and a variety of the sapphire and precious ruby is found with an evanescent star floating in its azure and crimson depths. The emerald is now the accepted gem of fashion, taking the place of the blue sapphire.

BRILLIANT COLORS FOR GLASS AND PORCELAIN.

The pigments commonly employed for decorating glass and porcelain have hitherto been prepared either by melting the metallic salt, which is generally the nitrate, in rosin (colophonium) or by decomposing soluble rosin soaps with the solution of these salts, whereby an insoluble resinat is formed, which is first dried and then dissolved, just as that formed by fusion is, in oil of turpentine, or lavender, or in nitrobenzol or some similar solvent.

Both of these methods of preparation have their advantages, the principal one being that a considerable quantity of the metallic salt remains undissolved, and when the resinous mass is dissolved it is precipitated and lost, or at best is only recovered by a tedious operation.

With the help of carbolic acid these pigments can be prepared without difficulty and without any insoluble metallic compounds separating worth mentioning.

Bismuth.—Ten grains of metallic bismuth are dissolved in aqua regia and evaporated in a porcelain dish to a thin syrup. When cold fifty grams of carbolic acid, liquefied by gently warming in hot water, are added. It is left standing for a few hours, for if warmed and stirred at once an energetic reaction at once takes place with violent foaming. At the end of this time it is well stirred with a glass rod and heated a while in a steam bath, when there will be an evolution of hydrochloric acid vapors. It is taken off the steam bath as soon as a drop taken out on a glass rod will dissolve clear in nitrobenzol. When this point is reached the mass is dissolved in nitrobenzol or a mixture of nitrobenzol and oil of spike, when the preparation will be ready to use.

Tin.—Ten grams of pure tin are dissolved in aqua regia and the solution evaporated to a thin syrup, then mixed with fifty grams of carbolic acid in the manner above described. The remainder of the operation is the same as for bismuth.

Uranium.—Fifteen grams of nitrate of uranium are mixed with forty grams of pure hydrochloric acid and dissolved. This solution is also mixed with fifty grams of carbolic acid, as before, and treated as already described.

Iron.—Fifteen grams of perchloride of iron are dissolved in pure hydrochloric acid and any excess removed by evaporation, so the solution when cold will have the consistence of a thin syrup. To this are added fifty grams of carbolic acid; and it is then treated as described under bismuth.

A manganese pigment can be made from the chloride of manganese; and nickel and cobalt pigments from their chlorides in precisely the same manner as that of iron was made from its chloride.

Of course, the finished preparation can be diluted to any desired extent, as the concentration of the original preparation leaves plenty of play for dilution.

The different pigments above described may be mixed with each other to form all kinds of combinations.—*Pottery Gazette.*

Proposals for furnishing stationery for the Supreme Court of the District of Columbia and for the United States Court House at Washington, are to be opened to-day at the office of the United States marshal for the district.

A bad temper always manages to act on the theory that two wrongs will somehow make it all right.

NEW STYLE FOR 1883.—NEW PRICE LIST.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

HEAVY FAILURE.

A. & E. Wallach, importers, manufacturers and dealers in fancy goods, at No. 452 Broadway, and at Grand street and South Fifth avenue, made a general assignment on Tuesday to Frederick Lewis. Preferences are given amounting to \$119,835.95. The following named are creditors to whom first preference is given: Eleanor Wallach, \$81,462.53; Edward Wallach, \$393; Joseph D. Plaut, \$14,275.71; Joseph Wallach, \$4,204.49; the National Pabquoque Bank, Danbury, Conn., \$5,000. The next preference is given to Meyer & Co. for \$1,742.47; Leonard Tillinghast, \$45; Riley & Osborn, \$90.04; George Havell, \$68.85; Geo. L. Engel, \$70.57; Robert Ferguson, \$203.02; F. Barnett & Co., \$183.50; the Spooner Manufacturing Company, \$570.50; Calhoun, Robbins & Co., \$25.91; Geo. W. Millar & Co., \$22.10; L. Praher & Brother, \$69.05; Naegel & Werner, \$877.80; Welling Compressed Ivory Manufacturing Company, \$271.60; R. Neumann & Co., \$716.11; Celluloid Novelty Company, \$20.95; Fred. Horst, \$2,062.77; Celluloid Brush Company, \$884.73; Zinn & Messer, \$935.08; Dunham, Buckley & Co., \$27.46; Bolz & Hass, \$199.84; T. L. Ludkins, \$29.25; Cutter & West, \$42.94; Strauss, Kupfe & Co., \$304.96; Slattuck & Binger, \$238.75; Henry Lindenmeyr, \$16.95; John Lutz, \$53.47; Henry Newman, \$144.90; E. S. Jaffray & Co., \$262.37; Seavey, Foster & Bowman, \$31.93; Hoennighaus & Curtis, \$215.77; Jacob Hornberger, \$11.15; A. Hahn, \$37; Smith & Stevens Manufacturing Company, \$17.32; J. S. Rockwell & Co., \$14; H. B. Clafin & Co., \$33; Paul Mende, \$22; New York Dyeing and Printing Company, \$86.63; Adolph Bernheimer & Co., \$64.60; A. Wimpfheimer & Brother, \$435.51; Richard Young, \$167.18; O'Callaghan & Fraser, \$98.48; William Shimper & Co., \$67.28; F. Koch, \$18; August Goertz & Co., \$112; R. G. Salomon, \$149.16; Humason Beckley Manufacturing Company, \$21.92; Hall, Nicoli & Granberry, \$18; C. A. Afumford & Co., \$64.28; D. Hass & Sons, \$28.22; Greef & Co., \$467.69; Charles A. Herpich, \$63; E. Bernhardt, \$52.50; R. Isaacs & Brother, \$1,214.79; the Charter Oak Life Insurance Company, \$2,500. The claim of R. Isaacs & Brother, is for a note held by them, and the claim of the Charter Oak Insurance Company for rent. The firm had numerous offers of money assistance from friends to bridge over its difficulties, but declined this aid. The business was started in a small way by Abraham Wallach in Maiden lane, about thirty-two years ago, after retiring from the firm of Amson & Wallach. He removed in 1860 to No. 347 Broadway. Edward Wallach, his brother, who had failed in the retail business, joined him in 1861 as a clerk, and in 1866 became a partner under the present style of the firm. After the panic of 1873 the firm sustained heavy losses owing to the shrinkage in value of stock. In March, 1877, it estimated its means at \$250,000, including real estate in Sixth avenue. In December, 1881, a fire occurred in the store. The firm was insured for \$179,350, and claimed stock worth \$195,000. The insurance companies settled by paying the firm \$108,000. R. S. Newcombe, the firm's attorney, said that it was too early yet to state the exact amount of assets and liabilities, the latter being principally foreign indebtedness, but the assignee would immediately begin to take stock and prepare a statement of the true condition of the firm. Frederick Lewis, the assignee, said that the principal causes of the failure were depression in trade, the firm not

being able to sell goods as readily as it should have done, and being under heavy expenses in conducting the fancy-goods business; depreciation in stock, and the effect of the losses sustained by the firm, which were actually nearly \$100,000. Another cause was losses in establishing the fancy leather branch of the business. The firm started a large factory at Grand street and South Fifth avenue, for the manufacture of fancy leather goods. It invested largely in machinery, tools, &c., employed a great many hands, and expected to make a great deal of money in the enterprise; but it had turned out differently and had cost a large amount. The total liability, Mr. Lewis thought, would amount to about \$325,000, of which about \$200,000 was in Europe, the balance being nearly all preferred. The assets he could not give any estimate of at present. They consist of a large stock of fancy goods, book accounts, some real estate, and notes for a large amount from a firm in Boston, to which the Wallachs granted a long extension. No one could tell, he said, what the assets would realize, as it would depend altogether upon how they were disposed of, being holiday goods principally.

EMBOSSSED BLOTING PAPER.

A patent has been granted to E. B. Farris for a blotting paper having its surface compressed or embossed into fine prints or corrugations, forming what is generally known as a cloth-faced blotting.

The method of forming the surface of this paper is as follows: Sheets of ordinary good blotting paper are interposed between the separate sheets of fine wire-cloth. The pile is then subjected to pressure. The paper receives the impress of the wire-cloth, and the surface of the paper will present numerous fine points which have been less compressed than the interstices between the points. Instead of wire-cloth, embossed or corrugated plates may be used, and the surface may, if desired, be produced by embossed or corrugated rolls.

Such blotting paper does not easily rub away, it possesses peculiar absorbing powers, and is beautiful in appearance.

THE METROPOLITAN DAILY PRESS.

VIII.

TRUTH.

Truth, the first penny morning daily established in the metropolis since the first issue of the *Sun*, which was started as a penny sheet, but subsequently became a two-cent paper, first appeared in the fall of 1879. Its lively, aggressive and sensational character, added to its cheapness and able management, at once secured for it a paying circulation. Charles A. Byrne, a well-known journalist and dramatical writer, became its editor, and Joseph Hart, for many years a theatrical manager, assumed the responsibility attaching to the publication and management of the paper. The circulation of *Truth* was 5,000 on the first day of its issue. It continued to increase until now it numbers 65,000.

Truth has been conducted as an independent paper. It has taken a vigorous part in the war upon monopolies, and has always labored for the interest of the masses, particularly the workingman. While its course has not always been commendable, it has accomplished much good. A year or two ago it opened fire on the Sixth avenue dives, a number of low places that had been in existence for a number of years and were a standing disgrace to New York. *Truth* alone, and stripping as it was, fought this evil with such gratifying results that in a few weeks it was among the things of the past. One of the buildings in which the most noted dive existed is now a gospel mission, and religious services are held in it daily.

About five months ago the editorial management of *Truth* changed. A. Oakey Hall, formerly mayor of New York and an experienced journalist, taking charge of the paper. The opposition against *Truth* caused by the starting of another penny daily, a few months ago, was a severe blow to it. Its circulation received a sudden check and fell much below its former figure, but still the paper is considered to be in a healthy state financially.

THE MORNING JOURNAL.

On November 16, 1882, there appeared on the streets of New York a bright, ably-edited penny daily paper called the *Morning Journal*. *Truth*, another New York daily, established some three years previous, had been a great success, which led the projectors of the *Morning Journal* to believe that two penny papers could live in the metropolis, in as much as the tone of *Truth*, it was thought, lacked the purity, which characterized the New York press generally, and thus left room for the establishment of a more high-toned sheet. It is needless to say that the new paper at once became popular. Its typographical make-up was attractive, and it published all of the news; and, while it preserved a tone that could not offend the most fastidious taste it was wide-awake and aggressive, independent and vigorous in the discussions of both local and general affairs, and full of enterprise and spirit. That the *Morning Journal* is a success is attested by its average daily circulation, which is 70,000. The publisher and editor of the paper is Albert Pulitzer, a St. Louis gentleman and an experienced manager of newspapers as well as a practical journalist.

THE STAATS ZEITUNG.

The foremost metropolitan newspaper, published in the German language, is the *Staats Zeitung*. It is a morning journal, and was established in 1834 by Jacob Uhl. It has a cir-

culation of about 59,000. It was started as an independent Democratic sheet, to which policy it still adheres. After Mr. Uhl's death, the publication of the paper was continued by his widow, who afterwards married Oswald Ottendorfer, under whose management it was conducted until 1880, when it passed into the hands of an association known as the *Staats Zeitung* Publication Company of which Mr. Ottendorfer is the president.

The able management of the *Staats Zeitung* brought it a large measure of prosperity. It was accepted as the official organ of the German population and German Democratic clubs. In 1873 the paper gave evidence of its pros-

perity and standing, by erecting a large and elegant five-story building for its headquarters, at a cost of \$700,000. The building is located at the juncture of Centre and Chatham streets. It is of granite, and is considered the most beautiful newspaper structure in the country.

The paper is under the editorial management of Oswald Ottendorfer, who has been connected with it since 1859 in an editorial capacity. In the matter of news-gathering the *Staats Zeitung* partakes of that spirit and energy which characterizes other metropolitan journals, and which has placed them far ahead of other newspapers in this country or Europe. It deserves its success.

No. 42 BLEECKER STREET, NEW YORK.

THE HISTORY OF PRINTING IN SCOTLAND.*

"Hail! mystic art, which men like angels taught,
To speak to eyes, and *print* embodied thought,
The deaf and dumb, blest skill, relieved by thee;
We make one sense perform the task of three.
We see, we hear, we touch the head, and heart,
And take, or give, what each but yields in part."

There is, perhaps, no study of greater importance than history. For while it may sometimes be justly termed dry reading, it is, generally speaking, a very profitable course to enter upon, showing us at once in what respects we excel, and in how far we come short of the glory of past ages. Having thus briefly indicated the value of the subject, we shall now proceed with our sketch of the History of Printing in Scotland.

We might compare this art to a river, emerging from a tiny spring in the far-off hills, but now so greatly increased in volume as to be recognized as a grand means of communication between man and man. Upon its bosom we can glide through the richest fields in the provinces of literature; occasionally we may encounter a bitter blast; but when it is over, the returning sunshine will disclose to view its power, its beauty, but above all its usefulness, in a still greater degree.

No art ever conferred so many benefits on mankind as printing has been the means of doing; none have so helped to civilize, to refine, to educate, and, therefore, to raise the masses to a true sense of their position, and of the best means of improving the same. Yet, with all these great and striking characteristics, its appreciation has been slow in the extreme—at least when we consider its capabilities; because, although worthy of great attention, it could only be cultivated after some other necessities had been founded. This, then, will account for the small amount of progress in the art, after its introduction into Scotland—the social state of the people was very low.

Considering that printing is little else than a mere mechanical process, apart from the literature which it is the means of preserving and disseminating, we have thought it best to make frequent allusions to the products of the press, for, although there may be many points of difference between the author and the printer, yet if the operations of one are stopped, the object of the other is defeated.

It will be seen that throughout this paper much more is said about the art of printing in Scotland, in connection with Edinburgh, than elsewhere. For this, however, the reasons are very obvious; it is the capital, has long been pre-eminent as a seat of learning, and the haunt of the nobility of the land, all of which have contributed to make it especially attractive for printers, by creating employment for them. This, of course, will not deter us from mentioning other places, as we have occasion to; and while we aim at being as complete as possible, we shall also try to exclude unnecessary details.

"When Liberty first sought a home on the earth,
No altar the goddess could find,
Till Art's greatest triumph to *printing* gave birth,
And her temple she reared in the mind."

Printing may be defined as the art of taking impressions of or from anything; and in this, its crudest form, is of a very ancient date. In its widest sense, however, and general acceptance in these days, it is understood to apply to the process known as letter-press printing, whereby an almost indefinite number of printed

copies can be produced from metallic types or plates. This, again, properly divides itself into two branches, viz., the composing or setting up of the types, by the compositor; and the inking, and otherwise preparing of the types in the machine, by which impressions are thrown off, by the pressman.

Although these distinctions are of comparatively recent date, in the history of typography (one of the good results of the division of labor, since they have greatly augmented the speed of production to the requirements of the age and, we believe, have been the means of improving the quality, as well as the style of the workmanship, and the position of the artisan) still, for the present, we will use the terms, "printer" and "printing," in the widest sense of the words, as applied to the subject of typography in Scotland, from the earliest times to the present.

"The meteor beam, that science lent mankind,
Darting effulgence on the inquiring mind,
Oft gleam'd—a weak and transitory light,
A moment glared, then sunk in endless night:
Man knew no means to hold the fitting case,
Of art's coy forms, that courted his embrace,
Her only hope in memory's stinted power,—
The oral record, changing every hour."

The honor of having been the inventor of the art of printing, has been variously ascribed to many individuals, and as many different cities on the Continent of Europe; but its introduction to Scotland is proved beyond a doubt to have been effected by Walter Chepman and Andro Myllar, in the city of Edinburgh, and early in the sixteenth century.

As the name of Myllar is little heard of after the first year of their license, it is thought that he was probably only employed for a time as a confidential workman.

There is an amount of uncertainty as to where Chepman learned the art, but we incline to the belief that it must have been in the Low Countries. For, while on the one hand, it is just probable he may have been taught it in England, there is, perhaps, even stronger reasons to support the idea of his having acquired this knowledge in Holland. The Scotch traded much then with the Dutch, and Chepman being a merchant, may have brought it from the Netherlands as a "special lot," seeing that printing had been practised there for some time. It is a somewhat humiliating reflection, that for thirty-three years this blessed art was practised in England, and during all that time it was never brought into requisition by the sister country.

The transmission of knowledge in those days, not to speak of inventions, was very slow, and often much protracted by the internal broils, which ever and anon set the people in a blaze, and by which innocents often suffered death—through popular ignorance.

Although the year 1507 is the date of the patent granted to Chepman and Myllar, it is alleged by some that they commenced business in 1505-6; but we will dismiss this idea as being unimportant.

Much excitement prevailed among the nations, in consequence of the important discoveries made by the Spaniards, and Scotland was reposing in a peaceful alliance with England, James the Fourth having married a daughter of Henry the Eighth. Thus far, all seemed favorable to the launching of the art among the Scottish people, and the King having given it his approval, business was begun. They were empowered by their license to print prayer-books, legends, lives of the saints, and such like; no regard being had, apparently, for educational works. From the comparatively little amount of enthusiasm and enterprise manifested by

these early printers, we are led to believe that this only formed a branch of their kind of universal monopoly of trades, as merchants; this is borne out by the items in their accounts, as contained in the ledger of Andrew Halyburton, a contemporary of theirs. Some even allege that Chepman was employed in the King's household as a servant; but, as he has left no information behind him, this, too, must remain a matter of conjecture. He is spoken of as a pious man, and at his death he bequeathed a small property to endow an altar in the Chapel of Holyrood.

So far as is known they printed nothing but the works of Scotsmen, except in two cases. Their first work was one of these, a translation from the French, and entitled the "Porteons of Nobleness," printed in 1507.

Next year they published a collection of ballads and romances, chiefly in the Scottish dialect; it was called "The Knightly Tale of Galagrus and Gawana, and other Poems," and contained contributions from Dunbar and Chaucer. The only copy extant is in the Advocates' Library at Edinburgh; it was deposited there by a gentleman, who accidentally discovered it in Ayrshire, about a hundred years ago. They printed also a Breviary for the Bishop of Aberdeen; in 1509 the first volume appeared, and the second followed in 1510. The workmanship is spoken of as good, in black-letter characters, but altogether devoid of punctuation.

The first encourager of the art in Scotland fell at Flodden Field, in 1513; and the first to practise it died in 1528, without having printed any works save those enumerated, not even the acts of Parliament, which, by the way, his privilege embraced.

Meantime, Luther had been proclaiming his gospel abroad, and had become so well known in Scotland that, even as early as 1525, his books were secretly conveyed into the land; but an act was passed to prevent this.

As the glorious light dawned upon the Protestants, many vented their wrath by writing withering satires on the clergy, and for this or being the possessor of a Bible many suffered death. By degrees, however, the literature of the Reformers wrought its charms upon those who perused it. But, when it is remembered how few even then were able to read, it will also be readily seen that this formed a great barrier to the progress of printing. Such were our early Scottish printers, their works and some of the difficulties they had to contend against, while in their own persons they combined and performed the work of machine-makers, pressmen, compositors, ink manufacturers and publishers of these days.

"Fire is the scythe wherewith Time doth mow,
Ten thousand precious volumes at a blow;
Blest *printing*! best of all its rage withstands,
And often chains his feet and ties his hands."

CROWN BRAND.

Stamping Inks, Mucilage, &c.,

*By the late James Hay in the *Stationery Trade Review*.

THE NEW BRITISH PATENT LAW.

The patent bill is now part of the law of the land, though it does not come into operation until January 1, 1884.

The procedure is much simplified, the applicant being only required to send through the post a document declaring that he is the first inventor of the specified matter, accompanied by a specification, either complete or provisional. The latter costs a sovereign, or a complete patent £4. It will last for four years.

A complete specification can be filed after the provisional within nine months, the cost being precisely the same, viz., £3 in addition to the one already paid for a provisional. It is noteworthy that all applications will be referred to an examiner who will have to report whether the nature of the invention has been fairly described, whether the papers are in official form, and also whether the title clearly indicates the subject matter. Then, if all is clear, the patent will pass on to the next stage; but if not, the controller will require the applicant to amend the specification.

The grounds on which an application may be opposed are: (1) Fraud; (2) Existence of a prior patent; (3) Similarity of a previous application then pending in the office.

It seems that one may freely use and publish his invention directly an application is filed, without prejudice to his patent; but proceedings for infringement cannot be taken until the patent has been sealed, which will take fifteen months.

When sealed a patent will be good for four years, but it may be extended every year following, to complete seven years, for an annual sum of £10; eighth and ninth years the annual sum of £15, and before the expiration of the tenth, eleventh, twelfth and thirteenth years, £20 per annum, or these fees may be paid in lump sums.

These provisions apply also to patents now existing. Should a patentee fail to keep up his payments, six months' grace will be allowed.

A patent may be revoked on the ground that the patentee was not the inventor, and also on the ground of a prior use.

The patent must contain one invention only.

Such are the chief characteristics of the new patent law, which we may refer to at greater length when the Act has received the practical attention of inventors and interested parties. —*London Paper Trade Review.*

The Post Office Department on Saturday began the distribution of the new two-cent stamps, and the requisition upon the contractors was the largest in number of pieces and value ever issued in one day. The order was for 37,379,830 postage stamps, 7,131,950 stamped envelopes (most of these articles being of the two-cent denomination) and 5,933,000 postal cards. The aggregate value of the articles ordered was \$950,000.

Look ever on the bright side, which is the heaven side of life. This is far better than any medicine.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

INTERNAL REVENUE STAMPS.

Numerous inquiries as to why the money value of stamped checks, adhesive check stamps and general proprietary medicine stamps forwarded to the Internal Revenue Bureau for redemption since the repeal of the stamp taxes by the passage of the new internal revenue act, has not been returned to the persons forwarding them, have been recently received by Commissioner Evans. The Commissioner said to-day that, owing to the large number of claims which have been presented, and which are now pending, it will be several months before the cases can be disposed of, and the money remitted therefor by the Department. Much of the delay in disposing of claims is caused by parties failing to comply with instructions in stating when the stamps were purchased, and whether from the government or from a government agent for the sale of stamps, or whether they were imprinted by the Graphic Company of New York.

EDUCATIONAL TOY MONEY.

A box, divided by eight small trays, contains pasteboard representations of the current United States coins. As a toy, it is in demand as a medium of exchange in "playing store," a most popular amusement among the children of our mercantile communities, and in this capacity its use as an educator in reckoning and making change is of great advantage. Also in commercial colleges and in primary schools it has its uses. One New England city has recently ordered a large number of sets for its primary schools.

This article is secured by United States patent, and the exclusive control of the patent is vested in the present manufacturers, Milton Bradley & Co., Springfield.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

— A SPECIALTY. —

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Records, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.—NO. 13. NEW YORK, SEPTEMBER 27, 1883. WHOLE NO. 431.

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, September 25, 1883.

Trade in the stationery line is fairly good—not such as it has been all around, but on the average healthy and not at all to be complained of. On straw wrapping, manillas and book paper prices have advanced, and dealers are doing a thriving business on generous orders, with collections easing up very much in comparison with the situation a fortnight or so ago. In staple goods the sales are brisk and in good quantities. Luxuries people are giving the go-by to some extent. Books are dull, and fancy goods are not going off at a very lively rate. The beginning of the school-year has given trade life in school-books and stationery, but aside from this, the September business has not been bad. All branches of business are enjoying a good, thrifty trade. Another failure occurred in the shoe trade last week, but it was of the sort that doesn't affect and has no effect whatever on general business. In fact, nearly all the failures that have occurred in Cincinnati within the last six months have been of men who either should not have failed at all, as shown by the excess of their assets over their liabilities, or of men who should have failed two or three years ago, as shown by the excess of their liabilities over their assets. No failure here has lessened confidence a whit.

Among new publications are "Peck's Municipal Laws of Ohio," 1 vol. 8vo. pp. 600, by Robert Clarke & Co.; "Ancient Egypt in the Light of Modern Discoveries," by H. S. Osborn, LL.D., Oxford, Ohio, 12 mo., by the same. Also by the same, "Powers and Duties of County Commissioners in the State of Ohio," by J. C. Wells, 8vo., pp. 463; also by the same, "Consultation Chart of Eye Symptoms and Complications and General Diseases," by Henry G. Cornwell, M.D., of Sterling Medical College, Columbus, Ohio.

Among trade visitors who have called recently are the following—named from New York: J. G. Stafford, of S. S. Stafford, 218 Pearl street, inks; E. W. Giles, Esterbrook Pen Company; B. E. Pike, with M. A. Reay; John Aikenhead, with John Gibson, lithographer; R. L. Brown, with Kiggins & Tooker Company; C. V. Graves, with James D. Whitmore & Co.; G. H. Graves, with Whitmore & Nicoll Company; W. L. Raymond, with Baker, Pratt & Co. The following named came from Massachusetts: J. A. Crane, of Crane Brothers, Westfield; James Franklin,

with Beebe & Holbrook Company, Holyoke; Oliver Broden, with L. L. Brown Paper Company, Adams; William H. Chamberlin, with Z. Crane, Jr., & Brother, Dalton. The following named from Philadelphia: E. A. Bush, Continental Manufacturing Company, inks, &c.; P. T. Bayes, with J. G. Delman & Co., paper and envelopes; J. R. Hope, with Hope & Co., West Point; and from other States and cities there are: E. Pomeroy, with Pomeroy & Sons, Newark, N. J.; George A. Clark, with Reilly & Mackin, Newark, N. J.; J. B. Chadwick, with Joseph Dixon Crucible Company, Jersey City; F. E. McArthur, with Levison & Blythe, St. Louis, inks, &c.

The tone of general business is good. Trade is not so brisk as it has been in times when there was a boom, but it is fairly healthy, and confidence is not disturbed. A wholesome regulating conservatism is maintained, and liquidation seems to have been going on all over the country, which augurs well for the country. The frost, too, has been compassionate, reports to the contrary notwithstanding.

PRINCE WILLIAM.

TORONTO NEWS.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., September 21, 1883.

I broke my last letter off short because I had spun it out pretty well, and yet I hadn't spun myself out. And why did I quit? Ah! there's the rub. My pen was dashing along, its well-known legible characteristics being in nowise impaired by its speed, when, lo, a frowning old ogre in an editorial chair suddenly started up before my vision, with an awful waste-basket, in which it was casting divers communications, and ever and anon slashing through sheets with a great pair of scissors. It gave me one glance, and chuckling, turned to the basket. The hint was taken, and I stopped right there.

I was going to remark at that point, though, that the Mr. Swaysee, of whom I spoke, is a "festive cuss." This is an Americanism, and nothing improper is intended to be conveyed. We took a way train out to Brockville, which progressed at the rate of about ten miles per hour, not including stoppages, which afforded some extra hours to admire sylvan scenes, &c., &c. As we only had lunch at Ottawa, and that a hasty one, we naturally, as the hours crept on, felt a vacuum inside, and it enlarged with every passing moment. Now, some wise body has said that nature abhors that sort of thing, and I am prepared to attest that it is sound philosophy. We reached Brockville at 10 P. M., with big anticipations of a square meal, and really, I think,

our imaginations were wrought up to a point that we could sniff the odor of the savory dishes we most craved from afar, and as we were jolted over the stones, which, by the way, served to enlarge the space to be filled. We were, after I don't know how long, dumped out of the stern of an old bus, and rushed wildly in, registered our names, and clamored for food. Alas and alas, we were late. The host said the fires were out, and the cook was out, and various other things were out, but he would do the best he could. Another hour. It is not necessary to write torture to the end of it, for that will be understood. I have read somewhere that one of the most sensitive members of the ordinary Briton's physical organization is his stomach, and I was much surprised to note the complacency with which our friend, Mr. Farran, put up with all this. That he is a good tempered individual there can be no question. At the same time I noted that when the viands were actually before us, though they were not by any means *au fait*, he stoutly maintained the reputation of his countrymen. Modesty prevents any enlargement on either my own or Mr. Swaysee's feats at this repast. On our way out Mr. Swaysee enlivened us with his facetiousness, and we were under obligations for numerous hearty laughs. Here is an item to the point, our trip brought to his mind the experience of somebody of a certain railroad. This road made tri-weekly trips. It went out on the first of the week, and tried all the rest of the week to get back. This is without the embellishments. The scene changes.

On Wednesday the 12th our Industrial Exhibition was formerly opened by the Marquis of Lorne, Princess Louise, Prince George, Lord Carnarvon, and other notables in attendance. It was impossible for your correspondent to be present at this imposing ceremonial. It went off all right, however, for the past ten days our city has been thronged with expectant visitors. This show has been a remarkable success from its first inception, and is due entirely to the enterprise of a few of our citizens. Each exhibit has been an advance, and this is the best of all. With the exception of one wet day the weather has been all that could be desired. We would like to enlarge, but the spectre of lost work restrains our inclinations, and we can do no more than tell about those folks with whom we are interested, and let me say right here, if you can find a series of stationers, &c., for a city of this size, on the continent, who stand higher, as to character and credit, point them out.

Of course, it was imperative that we should go to the exhibit, and your imagination, which I am sure is fertile, may picture us swelling

around with note-book and pencil in hand taking notes, and here is the result in homeopathic doses.

The first exhibit which arrests our attention is the fine display of the old and popular firm of Brown Brothers. On either end of their stand is a massive pile of blank-books, from the ponderous ledger to the common pass-book, which, for range of workmanship, from the most elaborate to the commonest book in these lines, cannot be excelled. Brown Brothers have also a fine display of leather goods, such as wallets, pocket-books, ladies reticules, &c., which will compare with any goods of the kind offered in this market. These with their miscellaneous list make one of the most attractive stands in the building.

Next we strike the Barber & Ellis Company, which also exhibits some first-class work in blank-books and miscellaneous binding. But the chief attraction at this stand are the envelope machines at work. The Bouvier machine, a Canadian invention, of which the firm holds the patent, is probably the best machine of the kind in the world. It will gum, fold and count 6,000 envelopes per hour, at regular speed. The Princess Louise was greatly interested with this machine, and spent some time in examining it.

Hunter, Rose & Co. make a good show of their school and miscellaneous publications, and excellent specimens of binding. They also exhibit stereotype and electrotype plates as near perfection as possible.

The Canada Publishing Company shows its new series of school-books.

Alexander Chase & Cable, engravers, &c., show some very credible work in their way. In fact, they occupy now a foremost position for good taste and good work.

You will observe after all how few there are of our leading stationers, &c., who put in an appearance. There are two or three who have always occupied a foremost place at these shows, and I was somewhat surprised not to find them in full force as usual.

Another thing, in my hasty dash through, struck me. We have a number of paper mills, which supply us with all our wrapping, news and book, others with engine-sized writings, &c., strawboard, &c., and I do not think there is a sheet of paper of any kind on exhibition, and indeed our paper makers, so far as I know, have never taken any interest in this matter. Why is it? Perhaps some of our paper-making friends will let us know.

I accidentally ran against W. S. Eaton, representing Aikin, Lambert & Co., of gold pen fame in your city. He says that he has had a good trip.

C. H.

THE HISTORY OF PRINTING IN SCOTLAND.

[Continued.]

We have seen printing in its Scotch cradle, and have recorded the death of its father before it had reached its twentieth year; we will now trace it to its present maturity. A very short time sufficed to assert its claims upon the attention of the public; being able to do much good or great harm, it was soon a source of strife among many, and was closely watched, both by Church and State, to secure its aid for advocating national measures. Whether it was owing to the restrictions placed upon printers, or that none were competent to follow up what Chepman had begun, we do not know, but until 1536 no other Scotch printer is heard of. During the interim, however, a foreigner named Ascensius established himself at Edinburgh, and produced in 1526 the "*Boetii Historia Scotorum*." The

internal dissensions prevailing among the nobility, the clergy and the crown at this time seems to have almost annihilated printing.

As before, the king was looked to for support, but he being a mere child when his father's death occurred, it was a question of waiting until he should reign in person, as the regent does not appear to have shown any disposition toward it.

In course of time Thomas Davidson was appointed Printer to the King, and was intrusted with the printing of the acts of parliament, passed during the reign of James V. This was in 1540, and the privilege lasted for six years. Here we might just observe that James V. had embraced the Roman Catholic religion, and this being opposed to the ideas of progress, little was made during his reign. A great and important faction arose toward the close of his kingship, and these, although frequently martyrs to the cause which they espoused, were ultimately victorious.

For a long time they were decidedly in the minority; and wealth, influence and strong prejudices had to be battled with ere printing could speak out.

As regards the acts referred to, they are said to be very fair specimens of typography, and were printed upon vellum.

Just a year before the death of our unhappy king, which took place in 1542, the "*History and Chroniklis of Scotland*," by a Canon of Aberdeen, was printed on paper and published by Davidson, by the command of his majesty; and in this we have the closing typographical event of his reign.

Another year, and the Popish power was broken, at least in so far as the decision of the Scottish Parliament was concerned, for it was then proclaimed, although contrary to the wishes of many of the clergy, that it would now be quite lawful to read the Scriptures in their mother-tongue. This alone we regard as a step toward the liberty of the subject, and in perspective the freedom of the press; for if the Bible was to become common enough to be read by the peasant, what power on earth could do this but printing? But in 1551 it was ruled by a Parliament under the unfortunate Queen Mary that, in consequence of the number and style of the publications then printed, it would be illegal to print without a license, and the consent of other officials specified, under pain of confiscation of property and banishment for life. This seems to have cooled the zeal of Edinburgh printers a little; but next year, on the invitation of Archbishop Hamilton, one John Skot, from London, introduced the art into St. Andrew's University, and there he printed a "*Catechism*." This occurred in 1552. It is alleged by some that the "*Complaint of Scotland*" was printed here in 1548, but this seems doubtful.

Returning again to Edinburgh, we find the Lords of the Congregation, as they were called, acknowledging the Reformation in 1560, and declaring all laws in connection with the Religion of Rome as null and void.

Following close upon this, in 1561, Robert Lepriok issued "*The Mirrour of ane Christen*" from his press at Edinburgh, and had offices established at Stirling and St. Andrews. A few years afterward this enterprising printer was granted the exclusive privilege to print two school-books in Latin at that time very popular in Scotland.

Again the nation was under a Regency, and strife was but too common among the nobles; but the Earl of Morton was an upholder of the Protestant faith and an encourager of printing. Under his patronage and during his adminis-

tration the first Scotch-printed Bible was issued by Thomas Bassandyne, at Edinburgh. It is remarkable as being the first Bible printed in Roman letters, as also for some curious errors in the text. With a view to meet the expense, and to disseminate the Scriptures throughout the land, each parish had to subscribe five pounds, which secured for them a folio edition of the Old and New Testaments and the Apocrypha. Besides this, Parliament ruled that every householder having lands or goods to the value of five hundred pounds must possess themselves of a folio Bible and Psalms.

Taking advantage of the probability of a demand, Bassandyne had produced a metrical version of the Psalms in 1575, the year before his Bible appeared. Strange to say, although one of the Reformers himself, his Bible was dedicated to James the Sixth, as Supreme Head of the Church, an idea which they, as a body, repudiated. He died in 1591, but three years previous to this was arraigned before the General Assembly, himself censured, and his work recalled. In 1575 John Ros printed the "*Actis of King James the Sixth*" at Edinburgh; and the "*Court of Venus*," by Rolland of Dalkeith, and for the same author the "*Seven Seages*," &c., in 1578. The year after this another Bible appeared. It was printed by Alexander Arbuthnot, the King's Printer for Scotland; it was also a folio edition, like the first, and in 1582 he gave the world "*Buchanini Historia*."

The art was now being more fully recognized, and the year 1584 found six printers at work in Edinburgh.

Of this number was Thomas Vautrollier, a Frenchman, and the printer of "*The Temporisour*," &c. When James the Sixth entered the lists as an author, which he did in 1585, when only in his nineteenth year, this same Vautrollier printed his "*Essays of a Prentice in the Divine Art of Poesie*." We have no authentic information regarding what may have issued from the press until 1591, but here again we find the king rushing into print. This time, however, he passes the door of the Frenchman, his former publisher, and gets Robert Waldegrave to print "*His Majesty's Poetical Exercises at Vacant Houres*." Perhaps it would not be too much to presume that the change pleased him well; for, a few years farther on, we find the same Waldegrave printing "*The Laws and Acts of King James the First, and his Successors*;" the "*Confession of Faith*;" the "*Cherrie and the Slae*," by Montgomerie; and Clapham's "*Sommons to Doooms Daie*." Thus, we see printing gradually extending its influence in the various paths of literature; and the foundation of the College having been laid at Edinburgh, its first thesis was printed by Charteris in 1596. As yet it was very much confined to the Metropolis, as up till 1599 only eleven printers had practised the art in Scotland. But a great stride was taken that year, by the introduction of Greek types into the Scottish founts. This was a want which Lepriok, many years before, had complained of, and no wonder, for whenever any Greek characters occurred in the text a blank was left, and they were afterward filled in with the pen; this must have been a laborious job, going over an edition of any work.

As a fair specimen of what occupied the thoughts of men of that time, we may take two publications of the following year, viz., a new edition of "*The Gude and Godly Ballads*," and King James' treatise on "*Dæmonologie*." The latter, written in an overbearing style, showed an absolute despotism on the part of His Majesty with regard to his ideas on Witchcraft; so that all who did not agree with him he considered worthy of death by burning at the stake, proving the truth of a future poet's couplet that

"Knowledge and wisdom, far from being one,
Hath oftentimes no connection."

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

~~*

L. PRANG & CO.'S

Christmas and New Year Cards.

~~*

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

~~* CHRISTMAS ART PRINTS ON SATIN. *~*~*

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. ILLUSTRATED CATALOGUE TO DEALERS ON APPLICATION.

BLACKHALL'S

PATENT POWER

PERFORATING MACHINE

Is now in use in most of the Leading Houses in the Trade.

It will run off a Ream of Medium with Five Lines of Perforating (and two Lifts) in Seven Minutes.
It makes a clean round hole, and will cut from Tissue-Paper to Card-Board.

TRADE OPINIONS.

"After two years' constant use, on all classes of work, we have had to replace but three pins. To-day it is in perfect order."—LEVISON & BLYTHE, St. Louis.

"After four years' use, on all classes of work, we consider it as good as when we got it. It is the best machine we ever saw."—BROWN BROS., Toronto.

"By using your machine our perforated work costs almost nothing when considered by the ream."—BOORUM & PEASE, New York.

"We recommend it to the trade. Just the machine long looked for."—SHORT & FORMAN, Cleveland, Ohio.

"Your perforator is very satisfactory. It is very superior in excellence of work and rapidity."—WESTERN BANK NOTE CO., Chicago, Ill.

"It exceeds our expectations. Does splendid work. Is easily attended and durable. We cheerfully recommend it."—Geo. D. BARNARD, St. Louis.

"We are gratified far beyond our expectations. As to the rapidity and accuracy of its working, we could not be better satisfied."—WM. G. JOHNSTON & Co., Pittsburgh, Pa.

"We would not do without it if we had to pay double the price we paid you."—COURIER-JOURNAL, Louisville, Ky.

"We recommend it as a first-class machine."—STEPHEN GREENE, Philadelphia.

"We tried four makes of perforators and found none that would do the required work until we got yours; it gives us the greatest satisfaction. We perforate with ease the thinnest tissue and manifold, up to thick card-board—sixty reams per day."—J. S. McDONALD & Co., Chicago, Ill.

"We are working them constantly. We fully endorse everything said in their praise by other firms who have them in use. They very soon repay themselves."—WATERLOW & SONS (Limited), London, May 1st, 1883.

Compare the speed, durability and work of these Machines with any other, and note the per centage made on the investment.

BLACKHALL'S RULING ATTACHMENT.

Can be applied to any sort of Striker, doubling the value of the ruling machine. A clear cash profit of 75 to 100 per cent. is gained by this attachment any day it is used (a large profit where now there is little or none). There are twenty-seven used in New York alone.

WHAT THE TRADE SAY OF IT.

"Send us another (the third); your attachment is a big thing and worth all you charge for them."—Geo. D. BARNARD & Co., St. Louis.

"We are satisfied as to their value. Send us another."—BEATTY & STEVENSON, New York.

"Your ruling attachment is equal to another machine. Does all you claim."—CULVER, PAGE, HOYNE & Co., Chicago.

"Your attachment soon pays for itself."—WATERLOW & SONS, London.

"We find one ruling machine, with attachment, does the work of two without it."—BROWN BROS., Toronto.

"With your attachment I can produce work in one half the usual time."—W. C. SMITH, New York.

Blackhall's Double Combined Striker and Lapper.

This simple arrangement will do twice the work of an ordinary Striker, and for ONE HEAD or stock work it will lap the head and run the down lines as fast as feint lining (without striking). It will also work one to five patterns at one time. The favor it has met with is the best proof of its value. Can be applied to any sort of ruling machine.

TESTIMONIALS.

"We can by ONE feeding finish work that required three feedings on the Hickok Striker just displaced by yours."—HALEY & BAKER, Philadelphia, Pa.

"Your Combination Striker does all you claim for it, gives twice the results of the American machine, does better work, and is a great saver of time and labor. It meets our warmest approval for its general merit."—WATERLOW & SONS (Limited), London, England.

The foregoing are a few from the many Testimonials I hold. (Second-hand Strikers of other makes on hand at very low prices.)

I would also call attention to my Defiance Blue Pulp, for making Ruling Ink. It is free from acid, grit or sediment, and will not separate or clog in the pens. Is strong and pure.

N.B.—Blackhall's Patent Marbler does away with the present system. A boy can do as much in a day as would usually take a man a week, without any gum, size or trouble. It is always ready to use, and one roll or pad, costing \$5.00, will marble 100 feet square. So the work costs about one-tenth of the usual plan.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

BICYCLE RACE AND SKATING RINK.

The drawings illustrate a new game-board just published by Milton Bradley & Co., Springfield, Mass. It is an elegant folding board, with polished wooden frame and sides, beautifully printed in colors. The principal game and occupying the entire outside when open is the "Bicycle Race." The race-course surrounds a green field, at the head of which is a rubber cushion of novel construction. The field is divided into sections, variously numbered from 1 to 5, and the play of a ball with a cue on this field governs the movements of the wheelmen around the course. The method of the game is new, as combining chance and skill, and the present interest in "the wheel" renders its publication very timely.

The inside of the board, when open, is naturally divided into three parts. The central and larger space is occupied by the "Skating Rink," in which checkers representing skaters are moved over the intricate path to the throw of the tetotum or dice. The design of the board is very artistic and beautiful in its combination of geometrical forms surrounding elegant figures of skaters and artistic designs in foliage and flowers.

On one of the smaller spaces is the juvenile game of "Cats' Promenade," in which numerous cats are represented as making their way by moonlight over house-tops to an old warehouse. The method is simple, the subject funny, and the design very picturesque. The other compartment has the game of "Hop-Scotch," which is new and very interesting, and while simple enough for the youngest children, is interesting to all.

A fifth game of Carom is played on the green field of the bicycle race. The designs and printing in chromo-lithography of this entire game are in superior style, the polished cherry frame is in keeping with the general artistic effect of the whole, and the games are selected to meet the tastes of an entire family circle of old and young. It is an ornament in any stock of goods and adapted to the best class of trade.

NEW PATENTS.

- No. 281,763. Gripper Mechanism for Printing Presses.—John T. Hawkins, Taunton, Mass.
 No. 281,765. Cabinet for Type-Writers or Sewing Machines.—Wm. Horrocks, Ilion, N. Y.
 No. 281,770. Educational Apparatus.—Pierre E. Lambert and Antoine M. Billoud, St. Laurent les Maçon, France. Patented in France June 26, 1882, No. 149,960.

SEND FOR CIRCULAR AND PRICE LIST.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. S. Donison, publisher, Pataha City, W. T., has sold out.

John G. Hodge, stationer, San Francisco, Cal., died a few days ago.

John Sower, publisher of the *Reporter*, Floyd, C. H., Va., died recently.

McKenzie & Dimock, stationers, Kansas City, Mo., have been burned out.

C. W. Greene, publishers *Tribune*, Kingston, N. M., will remove to Deming.

P. E. Edmonston, publisher of the *Flatonia Argus*, Flatonia, Tex., has sold out.

J. G. Miller & Co., printers, Philadelphia, Pa., are advertised to be sold out by the sheriff.

Niles & Thompson, dealers in wall-paper, Council Bluffs, Ia., have dissolved partnership.

M. M. Elmore, of the firm of Hearsey & Elmore, publishers of the *Daily States*, New Orleans, La., is dead.

The firm of Miles & Cory, publishers, Redfield, D. T., has dissolved. The business will be continued by E. J. Cory.

The establishment of W. G. Robinson, Jr., manufacturer of paper boxes, Atlanta, Ga., was burned a few days ago. Insured.

C. J. Bartram & Son, printers and stationers, New York city, have dissolved partnership. F. S. & C. B. Bartram continue the business.

Krause & Turner, publishers of the *Sentinel*, Jacksonville, Ore., have dissolved partnership. William Turner retires from the firm, the business being continued by Frank Krause.

A company, called the United States Publishing Company (Limited), has been formed in Philadelphia, Pa., by T. Ellwood Zell, Leo De Colange, Eugene Beaudoin and Thomas Russell.

C. W. Yates, Wilmington, N. C.; Mr. Smith, of the firm of Smith & Smith, Ionia, Mich.; G. L. Bishop, of George Bishop & Co., Montreal, Canada; Mr. King, of King & Merrill, Boston, Mass., were in town this week.

Henry Levy & Son have just received a very elegant variety of artificial flowers, suitable for window and parlor decoration; also, a large assortment of china, and bisque figures, mounted on plush and other pedestals.

John L. Hammett, dealer in school materials, Boston, is reported in insolvency. Liabilities, about \$31,625, of which \$7,950 is secured by a mortgage on real estate. The unincumbered assets amount to \$7,001, and consist of stock, \$1,200; accounts due, \$360; cash, \$83; note against W. T. Wylie, of New York, \$2,000; claim against A. J. Warren, \$3,358.

The Kiggins & Tooker Company's patent pencil loop memorandum still continues to sell largely, and it is not at all to be wondered at that it does, as it is one of the most complete memorandum books yet offered to the trade. It contains a first-class pencil with nickel tip made for the book by Faber. The perplexity of not having a pencil ready for use when wanted makes this book valuable, as it is a pencil holder as well as memorandum book. The company has extended the line in various styles of leather and also in sizes and rulings.

Charles W. F. Dare, manufacturer of children's carriages at No. 47 Courtlandt street and No. 87 Mangin street, has made an assignment to Charles A. Fuller, giving preferences for \$23,125.13, of which the largest were as follows: Benjamin L. Ludington, \$6,800; Chester N. Johnson, \$5,751; North River Bank, \$4,347; Oscar Barnett, \$3,000; P. E. Chase, \$1,600; Henry Campman, \$1,200; C. F. E. Pearsall, \$1,050; Henry M. Richardson, \$1,037. He is reported to have indorsed largely for J. S. Ludington, lumber dealer, who recently failed, having, it is said, about \$30,000 notes out. He has been in business since 1861. He failed in 1878, and compromised at 33 $\frac{1}{4}$ cents on the dollar.

George Davis, managing clerk of the firm of J. G. Bufford's Sons, has just returned from a trip to Toronto, Canada. His journey took in all the leading cities on the route. He found trade good and took many orders for his house. Mr. Davis says that the trade is demanding more and more the finer grades of advertising novelties. Cheap goods of this class have had their day. Customers of retail dealers look for finer specimens of art in the shape of souvenirs. No house is better prepared to supply the trade with this class of goods than J. G. Bufford's Sons.

T. L. Johnson, commercial traveler for Keuffel & Esser, has just returned from a trip through the West. He will leave town in a few days for another Western trip, the Western trade of his firm being unusually good this fall. Hitherto European productions in drawing materials have had the preference with tradesmen generally, but the superiority as well as cheapness of American goods in this line are gradually winning favor and driving out of the market imported goods.

The demand for phonographic materials has become so great that stationers and booksellers are handling more and more of these goods each season. The latest thing offered to the trade in this line is a phonographic copy-book. Copies of phonographic characters are printed in the book, thus familiarizing the pupil with correct outlines &c., and impressing upon his mind the principles of phonography.

D. Alexander Merrin, publisher of *Friends' works*, printer, stationer, &c., Manchester, England, has removed his business to more central and commodious quarters on Strutt street, at the front of the Manchester Royal Exchange. This removal is forced by the increase of his business. The new location will be called the Royal Exchange Printing Works.

H. P. French, of the firm of French & Choate, departed for the East on Monday, where it is his intention of making an extended commercial tour for the purpose of taking orders for the numerous school novelties which his firm deals in.

C. M. Canty, of the *Newsdealer*, Boston, was in town last week. He is about to engage in the publication of another paper to be known as the *Rubber Trade Journal*.

George E. Lane, with C. Jourgensen, stationer, 98 Maiden lane, has been taking a week's recuperation in the hills of New Hampshire.

W. A. Kelsey & Co. have bought out J. Cook & Co., manufacturers of presses and dealers in printers' materials, Meriden, Conn.

Zed. S. Hall, Kansas City, Mo., wants trade lists of books, stationery and fancy goods. He will open a store about October 5.

E. A. Horton & Co., printers, Meriden, Conn., have admitted Joel A. Hungerford as a member of the firm.

Richard Gledhill, dealer in paper-hangings, New York city, is dead.

An assignment has been made by Adam Craig & Co., printers, Chicago, Ill.

C. S. Paine, publisher of the *Press*, Ukiah, Cal., has sold out to J. S. Poppe.

The *Telegraph* Publishing Company, Buffalo, N. Y., has sold out to William J. Morgan.

Marsh & Co., dealers in Japanese goods, Cincinnati, Ohio, are advertising to close out.

S. B. Duncan & Co., manufacturers of pens, Cincinnati, Ohio, have dissolved partnership.

The Roberts News Company, Canton, Ohio, has changed its style to the Canton News Company.

W. R. Johns, publisher of the *Republican Gazette*, Clarion, Pa., has sold out to John B. Patrick.

An attachment has been issued against the property of W. C. Dennis, printer, Grand Rapids, Mich.

Meyers & Smith, dealers in wall-paper, Canton, Ohio, have sold out to E. Rowland, who has sold out to J. L. Meyers.

The Reen Lithographing and Printing Company, Philadelphia, Pa., was advertised to be closed out by the sheriff on the 26th inst.

Amos Currier & Co., dealers in picture frames, &c., San Francisco, Cal., have dissolved partnership. The business will be carried on by Amos Currier.

De La Rue's September circular and price-list presents a number of attractive announcements. Some of the goods illustrated show designs which are not known in this market.

B. N. Farrier, formerly president of the Montague Paper Company, Turner's Falls, Mass., has resigned that position. George E. Marshall has been chosen to fill his place.

Wm. H. Peters has been charged with the duty of looking after the city trade of Geo. B. Hurd & Co. Mr. Peters was lately bookkeeper for the house, and the new position is a promotion for this active young man.

H. L. Lipman, Philadelphia, is having great success in the sale of desk blotting pads, which being manufactured in large quantities, can be sold cheap, although of very good quality. The flat expanding desk folio and blotting pad which hold from one to five hundred letters, and always remain flat, is sold by the same firm, and is said to be in great demand.

Milton Bradley & Co., Springfield, Mass., have just issued their new catalogue of games, toys and novelties. The trade everywhere will want this catalogue to enable them to make a judicious selection of goods of the most taking character. The catalogue is handsomely printed and illustrated, some of the engravings being produced in colors. The list embraces a wide variety of goods which are designed for amusement, instruction, and different useful purposes.

Among recent art productions are some new "artotype" engravings published by Charles Tabor & Co., New Bedford, Mass., and 28 Bond street, New York. These engravings are reproductions of works by well-known artists and thoroughly artistic in their character. The "Noble Charger" of Rosa Bonheur is an elegant reproduction. It is a fine representation of the head of a war-horse. "Alderney" (Edward Douglas) is a charming group of a maiden, an Alderney cow and calf. These engravings are printed on plate paper, and the list comprises a great many numbers of select subjects. The

firm has additional works in course of preparation. The trade are invited to send for lists.

Joseph Taylor, stationer, &c., Toronto, Ont., was burned out recently.

George H. Tracy, bookseller and stationer, Baker City, Ore., has sold out.

G. A. Pierrot, printer, St. Louis, Mo., has been succeeded by G. Pierrot & Son.

Olin P. Larson, publisher, Summitville, Col., has sold out to C. K. Holmburg.

C. W. Black, stationer, Puyallup, W. T., has called a meeting of his creditors.

J. S. Sibley, of the firm of Sibley & Lee, printers, Pawtucket, R. I., died a few days ago.

L. Wright & Son, booksellers and stationers, Holyoke, Mass., are closing out their business.

The goods and chattels of Frederick Perry, printer, Toronto, Ont., are advertised to be sold at auction by bailiff.

C. H. Codman, of the firm of C. H. Codman & Co., dealers in photograph and picture materials, Boston, Mass., is dead.

William H. Tyson, dealer in stationery, Philadelphia, Pa., has been damaged by fire and water about \$100. Insured for \$1,300.

Harry Wiltshire has got out a very handsomely engraved card of styles of engraved visiting cards, invitations, &c., for the season 1883-4.

E. & H. T. Anthony & Co. have just begun to manufacture and offer to the trade a new paste, which is an invention of one of the members of the firm. The article is especially useful to photographers, but is also adapted to the general purposes of a paste. The paste is warranted not to become sour or moldy. Photographers will find in it a very convenient and useful article, as they are unable to use the ordinary forms of paste sold by stationers.

F. H. Loss, Jr., 46 Murray street, this city, has taken the agency for the sale of whitewood and holly goods for decorating. He has just received a full line of the goods for the holiday season, comprising many articles of very novel and curious design. Among these are easels, pallets, vases, card-tables, wheelbarrows, trowels, hatchets, scythes, thermometers, picture-holders, &c. Prices and descriptions of these goods can be had by addressing Mr. Loss.

Keuffel & Esser have just brought out a new line of heliographic paper, which is used for reproducing mechanical drawings by what is known among draftsmen as the "blue process." The new paper is of pure linen stock, free from any chemical substances, and of a toughness hitherto unknown with papers of its class. It produces clear white copies on dark blue ground, even a long time after the paper has been prepared, and the copies will never fade or become indistinct. The sale of the Excelsior tape, which is the production of this firm, has largely increased. In other goods of its line the firm reports a brisk trade.

J. G. Hyde, 12 Frankfort street, has just issued a revised price-list of chromo and advertising cards, orders of dance, &c.

The business of E. D. Passmore, printer and publisher, Port Dover, Ont., has been sold to L. G. Morgan.

Willard Lewis & Son, dealers in paper stock, Walpole, Mass., have suspended.

PHOTO-MECHANICAL PRINTING.—When a colotypic picture is transferred to stone for lithographic printing, or to metal for etching into a typographic block, the details are apt to clog

during the first inking, owing to fatty matter round the ink becoming pressed out. A recent improvement of Mr. Swan, however, yields a transfer with a grain clearly and sharply defined, so as to print well from a stone, or yield a transfer capable of being inked on zinc or other metal. The method consists in inking the colotypic plate before soaking it in water, and as the gelatine softens in parts, the ink is removed by sponging. During this operation the ink breaks up into a clear grain free from the halo of grease referred to above. The process is not patented, and promises to give an impetus to photo-mechanical printing.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, \$1.75; No. 2, \$2.50; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

Signed by the following gentlemen and over 1,000 others: G. S. Coe, Pres. Am. Ex. Nat'l Bank; J. A. Beardsley, Cashier Nat'l Bank of North America; Wm. A. Fall, Pres. Corn Exchange Bank; E. H. Lowry, Pres. Nat'l Bank of the Republic; F. D. Tappan, Pres. Gallatin Nat'l Bank; C. F. Timpson, Cashier Continental Bank; I. G. Ogden, Cashier New York Co. Nat'l Bank; Chas. Dennis, Vice-Pres. PREPARATION OF GOLD FOR POTTERY FROM EARLIEST USE.

One of the earliest methods of preparing gold for the gilding of china and earthenware was by first dissolving the gold in aqua regia and then submitting the mixture to the influence of heat, until the acid contained in the mixture was entirely dissipated, and nothing left except the gold in a state of powder. The powder thus obtained was then mixed with borax and gum-water for use. Another method, and a quicker, was to dissolve the gold in aqua regia, and then precipitate it by adding to it strips of metallic copper. This powder was also used, mixed with borax and gum-water.

Gold, at one time, was applied to the ware in the form of gold leaf, no flux but that contained in the glaze being used. This was found to be an objectionable method, owing to the loss occasioned through a great part of the gold being carried off by the heat of the fire required to melt the glaze.

An improvement on this method was in the application of a flux, ground in gum-water, to the surface of the ware, the gold leaf being laid on when the preparation was nearly dry.

One of the many preparations of gold in use in the present time consists of the following proportions: $\frac{1}{2}$ oz. brown gold, $\frac{1}{2}$ oz. mercury, 24 grains No. 8 flux, 24 grains silver, and 78 grains alloy.

To prepare the above ingredients for use, well mix in a Wedgwood mortar, and then grind, first in water and afterward in spirits of turpentine, on a glass slab, until fine. To ascertain whether the gold is fine enough, try a little by rubbing it with a circular motion between the thumb nails; if the gold feels gritty, it requires more grinding. The above method answers well for all ordinary purposes where only a small quantity of gold is required. Large manufacturers, who use a considerable quantity, grind theirs in a mill.

Gold has held its own as a beautifier of china and earthenware for a number of years, and yet it still keeps its place to the fore.

Great improvements have been made in the manner of applying gold to the ware, and many imperfect and perfect processes still continue to claim the attention of manufacturers.

Mr. Charles Barlow has now perfected, and patented, his new process of printing in gold. And among other novelties which he now offers to the market, there are two that deserve special mention,—a vase decorated with an elegant design in dead and bright gold, on a pale blue ground, resembling terra-cotta; and a plaque of so massive an appearance that it could be mistaken for the solid metal itself. The lights and shades of the farm-yard scene, with which the plaque is decorated, are shown up with the greatest fidelity, and most exquisite effect, in dead and bright gold.—*Pottery Gazette*.

A new idea in the shape of a letter-press is presented in the pneumatic copying press which has recently been introduced to the stationery trade. It is very ornamental, and is intended for the parlor as well as the counting-room. There are many novel features about it which make it quite unique.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

ADVANCED as we are in all of the amenities and accommodations of modern civilization, there are many things which we can learn from other nations. Fidelity guaranty policies as practised in Australia are one of these. The issue of fidelity guaranty policies by insurance companies, writes Consul-General Spencer, of Melbourne, "supplies a desideratum that has long been deeply felt, not only in official but in commercial life, while it furnishes one of the most striking illustrations of the co-operative tendencies of the complex civilization of the present age. The advantages of the system are so obvious, and the objections to private guaranty are so many and so great, that it is surprising that the latter has not long since been superseded by that of public companies. To a man of refined and delicate sensibilities, occupying a position of trust and responsibility, nothing could be more embarrassing than to be under the necessity of soliciting his personal friends to become pecuniarily responsible for his fidelity and good behavior." This plan of insurance not only confirms the self-respect and personal independence of the party who seeks it, but it relieves his friends or acquaintances from the embarrassing alternative of refusing a personal favor or of incurring pecuniary liability without valuable consideration and independent of business principles. We believe that a trust company in this city makes a business of guaranteeing bonds and liabilities upon approved securities, but we do not know that it pursues the system of broadly insuring the fidelity of persons seeking business positions. "A clerk in a bank, a new official in the Government service, or a municipal officer," says the *Australasian Insurance and Banking Record*, "need not go hat in hand to anyone. With good character at his back he can buy the commodity he wants. Guaranty is an article purchasable in the market from companies which make it their business to sell it, and which do so, not as a benevolence, but as a profitable source of revenue."

THE STATIONER again recurs to the subject of "cheap credits," and invites the members of the stationery trade to take their part in accelerating the approach of the day when they may be done away with. We have called the attention of our readers several times to the ill effects—we should rather say pernicious influence—of dating bills ahead, and, in common with other commercial journals, we have set before the trade, in plain terms, what the results of persistence in the practice will be. We are glad to be able to note a change. The *Bulletin*, which has been as earnest as we in putting the matter in a proper light before the public, says: "We have reason to believe that the agitation of the subject of dating bills far ahead, and thus selling goods on long-time open account, is beginning to bear fruit. Not a few merchants have felt for many months

that they were pursuing very unbusiness-like methods and drifting into the questionable position of trusting out their merchandise without any other evidence of debt than open book account, the terms of which were often a matter of dispute when the account itself was finally rendered. The evil was constantly tending to grow worse, and merchants, though very desirous of doing so, were wholly unable themselves to stop it. A condition of this mode of doing business was the facility of bank accommodations upon seller's note. But the attention of bankers has been attracted to the situation, and the sale of single-named paper has been so much curtailed of late that a return to the old method has become an actual necessity. We understand that buyers are beginning to give their notes for purchases at four months, for instance. Some of the best houses are doing this, and it is expected that the most unsound feature of the present credit system will ere long be well eliminated. It is very desirable that such a result should be reached for the welfare of buyers as well as of sellers. Along with the settlement of notes there is also a tendency to shorten the time of credit. It will not, perhaps, be easy to reach the cash basis of four years ago, but the disposition to turn round in that direction is one of the most hopeful signs in mercantile circles, and already tends to strengthen the situation and to encourage merchants." It is well remarked that there is a hopeful sign in the disposition to return to cash transactions. If buyers as well as sellers will only keep within this safety line they will make and save money.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

I was very much impressed with the gorgeousness of the members of the Korean embassy whom I chanced to see in the streets the other day. I could not but think what a decided sensation would be created and what an enlivening effect it would have upon trade if the commercial tourists should adopt some such style of attire. To some of the young men in the trade who have been notable in amateur histrionics it would not come awkward; to others it would be inconvenient at first; but just think of the effect that could be produced. The gentleman who lives at Newark would make a charming spectacle. I leave the idea for the consideration of "the boys." They could get along just as well as the distinguished Korean who wore yellow kids on Wednesday for the first time.

There has been a huge bicycle time at Springfield, where Bradley & Co.'s "Bicycle Race" was developed *au naturel*. Henry E. Ducker, superintendent of the Springfield Printing Company's bindery, was about the busiest man in America during the past week. He is President of the Springfield Bicycle Club and has been trying to care for 100,000 people, more or less, during the tournament. I believe that he came out all right, without even a "header."

Roaming, still roaming! The President of the Stationers' Board of Trade, is, I under

stand, still traveling the country o'er and enjoying himself. I believe that he resides in Brooklyn when at home. I should want to stay away myself if I had to live in Brooklyn.

I met with a charming illustration of ingenuousness in my tour this week. It was up-town, and it speaks well for the moral tone of an up-town portion of the community. It was found on a milk wagon.

On the "dash" of the wagon—prominent to public view—was the motto "Jim's Friends," the friends being represented by well painted portraits of two cows, a milk can and a pump. This is "honest."

I commend this example to the attention of tradesmen of every degree. If every person who is addicted to short weights and short counts should thus publicly give notice of their shortcomings, what a good thing it would be for the public. It might be injudicious, for the reason that, if generally adopted, it would lead people to neglect all subinary affairs and get ready for the millenium.

There was a jolly, good-natured crowd which participated in the base-ball match and subsequent dinner on Saturday. The Baltimoreans, who came on to defy New York, are a nice lot of boys and the acquaintances formed will conduce to business amenities.

I understand that a "racket is on" in the card trade, quite a quarrel having arisen between card importers and jobbers who handle the goods. The latter complain that the importers have taken to jobbing and are skaling away their trade by soliciting orders from the retailers. This isn't a new story, for the thing has been done in various lines before. I wonder whether the importers mean to declare: "The jobber must go."

My tour through the trade was rather limited this week, owing to the pressure of business requiring my attention. This must be my excuse for having so little to say. I did want to pay a compliment to the best-dressed man in the trade and tell a little story about him, but just now I must forbear.

ANSWERS TO CORRESPONDENTS.

Subscriber is informed that Chas. J. Cohen, Philadelphia, has Phillips' tape in stock in a variety of sizes and styles.

Edward wants us to give the definition of the English terms "Small Hands," "Royal Hands," and "Browns," as used in connection with paper mills.

Ans.—By "Small Hands" we would understand their manilla papers, "Royal Hands" being thick and heavy goods of the same class. "Browns" are nothing more nor less than ordinary brown wrappings. These grades are all wrappings.

T. & Co. want names of a few manufacturers of folding wire card-racks.

Ans.—Williams Globe Wire Works, 85 Fulton street, New York, is the only manufacturer that we are positive of. Woods & Sherwood, Worcester, Mass., may make such goods.

W. & C. want names of "reward card" publishers.

Ans.—L. Prang & Co., Boston; J. G. Bufford's Sons, Boston; M. J. Anderson, New York; John Gibson, New York, and American Tract Soci-

ety, New York. Please consult our advertising columns for the business addresses.

J. F. B. asks who are New York agents for Robinson Engraving Company, of Boston.

Ans.—Evans, Plummer & Co., 57 Beekman street.

P. R. & Co. want to be informed who manufactures "Hill's Blotter Bath."

Ans.—B. B. Hill Manufacturing Company, 1,016 New Market street, Philadelphia.

PRINTING IN CHINA.

In an interesting article on printing in China, the *North China Herald* says that the first great promoter of the art of printing was Fenh Ying, who 932 A. D. advised the emperor to have the Confucian classics printed with wooden blocks engraved for the purpose. The first books were printed in a regular manner and in pursuance of a decree in 953. The mariner's compass and rockets were invented about the same time, showing that at this period men's minds were much stirred toward invention. Twenty years after the edict, the blocks of the classics were pronounced ready and were placed on sale. Large-sized editions, which were the only ones printed at first, were soon succeeded by pocket editions. The works printed under the Lung Emperors at Hangchow were celebrated for their beauty; and those of western China came next, and those of Fokhein last. Movable types of copper and lead were tried about the same time, but it was thought mistakes were more numerous with them, and therefore the fixed blocks were prepared. Paper made from cotton was tried, but it was found so expensive that the bamboo-made paper held its ground. In the Sung dynasty, the method was also tried of engraving on soft clay, and afterward hardening it by baking. The separate characters were not thicker than ordinary copper coins. Each of them was in fact a seal. An iron plate was prepared with a facing of turpentine, wax and the ashes of burned paper. Over this was placed an iron frame, in which the clay types were set up until it was full. The whole was then sufficiently heated to melt the wax facing. An iron plate was placed above the types, making them perfectly level, the wax being just soft enough to allow it to sink into it to the proper depth. This being done, it would be possible to print sev-

eral hundred of thousand copies with great rapidity. Two forms prepared in this way were ready for the pressman's use, so that when he had done with one he would proceed with another without delay. Here is undoubtedly the principle of the printing press of Europe, although western printers can dispense with a soft wax bed for types, can obtain a level surface without this device. Perhaps the need of capital to lay in a stock of types, the want of a good type metal easily cut and sufficiently hard, and superior beauty of the Chinese characters when carved in wood, have prevented the wide employment of the movable types which are so convenient for all alphabetic writing. The inventor of this mode of printing in movable types, five centuries before they were invented in Europe, was named Pi Sheng.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, September 26, 1883.

THE MONEY MARKET.—Though the discount rates remain the same as last week, a gradual hardening of the money market is generally looked for, and an advance will be welcomed by the banks and corporations which have been compelled to accept a much smaller return for their balances than in former years. No such stringency as might seriously derange commercial affairs, however, is apprehended. In the stock market the "bears" have had things pretty much their own way, and prices have tended strongly downward. The "bulls" have vainly sought to stem the adverse current, but they are still hoping for and predicting better things. Intrinsically considered, they say that stocks are now very cheap, as a rule. Long date governments still show no advancing tendency, but railroad mortgages sympathize more or less with the fortunes of the share list. Sterling exchange is very quiet and steady. Continental exchange is firm, with a slight improvement in French francs.

THE PAPER MARKET.—The situation is pretty much the same as last week, no further improvement in the demand having shown itself. There is very little spirit or animation in the city trade, although here and there are buyers who have shown some anxiety to lay in supplies to provide against a scarcity through the lessened production, and many mills which were kept fairly busy on orders before the dry season commenced, have been able to secure an advance on new orders taken of from 1/2 to 1c. on some grades of fine papers. While the low grades of book papers and news have undergone no actual advance in price, the feeling is gradually growing stronger, and if the drought continues very much longer these must advance in price. The recent advance in manillas is fairly sustained, and dealers in these show more activity than in most any other grade. The straw wrapping trade is in much better shape than a month ago. The mills which had been shut down since August 15, started up again last week; that is, those that had any water to run with. Straw boards are in very slow movement and prices quite nominal.

THE STATIONERY MARKET.—There has been a little improvement in the market during the past few days. Dealers generally have been quite busy, and, on the whole, trade has shown a more healthy character. Not only are more orders being received from commercial travelers, but dealers are doing a better in-town and near-by business. The advance in the price of envelopes has not had any perceptible effect as yet, and it is rather too soon to judge what influence it will have on the trade. Advertising novelties are commanding a good trade, and the demand for the finer grades of these goods is increasing. In Christmas cards the trade is somewhat disorganized, owing to the fact that importers are selling to small dealers, and thereby encroaching on the legitimate trade of the jobbers, who have generally determined that if the importers do not take better care of the jobbing trade, they will have to sell all of their goods themselves.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!

COMFORT!

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

A machine has lately been invented of great importance to the makers of mourning paper. It is stated that by its use twenty thousand sheets of post-quarto can be black bordered in ten hours. The sheets are fed into the machine automatically, and after passing under a revolving brush charged with ink, are carried over an india-rubber band on an endless wire web, beneath which is a row of gas-lights that dries the work. The paper is then made to pass under a very hard brush to give a burnish, and the process is completed. The inventor is said to be a Frenchman.

An invention very important for lithographers has been made and patented by Herr Lott, Jr., of the firm of Lott & Gerber, of Vienna. It relates to the preparation of transfers from typographic and lithographic printing, to be made on cheap and common paper, which may be kept for years, and then put in working order within a few minutes as well on stone as on zinc, glass, &c. These transfers will serve as well for fine chromo as for common black work, and the process has been already for a length of time in use in the inventor's own office and always given the most satisfactory results. As it does away with the necessity for preserving expensive stones, it is easy to guess that much may be saved by Herr Lott's invention.—*Printers-Register.*

A patent has recently been granted for a new method of distributing printing type. The type to be distributed are to be made of celluloid or of aluminium, alloyed with other metals, and each letter or character is to be of a different specific gravity. The separation is to be effected by means of a separating liquid, which may be a salt of mercury or other salt of high specific gravity, in which the type is to be immersed, and then "varying the specific gravity of the liquid in the ratio of the variations in the specific gravity of the type, as many times as there are characters and spaces in the series of characters and spaces to be distributed, until, sort by sort, each of the characters and spaces, in the series of characters and spaces, is separated from each and every other character and space."

THE METROPOLITAN DAILY PRESS.

IX.

THE JOURNAL OF COMMERCE.

A small daily paper, which was subsequently re-christened the *Journal of Commerce* appeared on the streets of New York in 1827. The paper was started by a number of gentlemen, prominent among whom were Arthur and Lewis Tappan. The publishers were pronounced abolitionists, which gave the impression that the new daily was to be an abolition sheet, but it happened that the great anti-slavery question which so greatly agitated the American public and brought on the war of 1861, did not come up until a great many years afterward.

The fact is the germ, which in after years developed into the *Journal of Commerce*, was started under very different circumstances and with an entirely different purpose from that of a political organ. A number of ballet girls had come over from France and began to give performances in the theatres of the city, appearing nightly on the stage in a half nude condition. The other papers did not disapprove of these performances owing to the fact, undoubtedly, that they were patronized largely by the managers of the theatres. Accordingly the idea was conceived of starting a paper that would give all of the news of the day without pandering to what was considered vicious and demoralizing. This was the special object of the new paper.

Public prejudice, however, was too powerful to fight against, and the founders of the paper abandoned it as an unprofitable enterprise. David Hale and Gerard Hallock became the owners, Mr. Hale taking the editorial chair. The new owners changed the title of the paper to the *Journal of Commerce*, and started out with the object of making it a first-class commercial paper. After two or three years of hard

struggle the journal was established on a firm financial basis. A fine new building, fronting on Beaver, Hanover and Pearl streets, the present site of the paper, was erected in 1866. It was six stories in height, and was for a great many years the only six-story building downtown.

Mr. Hale died in 1849. David M. Stone, the present editor of the paper, succeeded him. In 1861, Mr. Stone and William C. Prime bought out the interest of Gerard Hallock, who was still a part owner of the paper. The journal continued to prosper under the new management, and became one of the leading commercial newspapers in the country, a rank to which it can still lay claim.

Mr. Stone, who continues to be its editor-in-chief, is one of the most industrious newspaper men in the country. He devotes himself so closely to the interests of the paper that he scarcely gives himself a moment's relaxation. He has not been out of town one whole week-day in eighteen years, and has not had a week's vacation in thirty years. Not a line of editorial goes into the paper until it has received his closest scrutiny. Last summer Mr. Stone wrote all of the editorials for four and a half weeks, while the other members of the editorial force were on a vacation. The replies to correspondents, which are made a special feature of by the paper, are all written by Mr. Stone. Many of the replies require the most careful and lengthy research.

THE DAILY COMMERCIAL BULLETIN.

The *Daily Commercial Bulletin* was established in 1863, by William B. Dana & Co. The paper was subsequently bought by William Dodsworth. Since it was started it has been considerably enlarged so that it is now nearly the size of the *Journal of Commerce*. Its circulation is about 8,000 or 10,000, which is mostly

outside of the city. It is a strictly commercial newspaper and the ability and enterprise with which it is edited and managed makes it a formidable competitor of the *Journal of Commerce*.

LE MESSENGER FRANCO-AMERICAIN.

Le Messenger Franco-Americain was established by H. de Mareil in 1859, and was conducted successfully until February last, when the furniture, machinery, type, fixtures, good-will and title were sold to Lallemand & Martin for \$30,000, the buyers giving \$5,000 in cash and a mortgage for the remainder. The business in the hands of the new firm was run at a loss, and the proprietors failing to pay the sum secured by the mortgage within the stipulated time it was foreclosed and the property was sold, the purchaser being Hector Rogowski. On August 8th, *Le Messenger*, which had been in the meantime temporarily suspended, was again regularly issued. M. de Mareil, its former owner and manager, becoming its editor under the new management.

Le Messenger is Republican in sentiment, and is under able management, editorially. There are said to be more than 10,000 Frenchmen in New York who subscribe to the daily edition of the paper.

THE WALL STREET NEWS.

The *Wall Street News* was started some eight or nine years ago. The paper, as its name indicates, is devoted to disseminating news of interest to bankers and brokers, such as stock quotations, &c. Its editor is Charles D. Keep, who has associated with him Cuthbert Mills. It is published daily, and is sold for two cents.

In addition to the *Wall Street News*, the *Journal of Commerce* and the *Commercial Bulletin*, there are several other daily financial and commercial papers published in the metropolis, among which may be mentioned the *Financial and Mining News*, the *Indicator*, the *Stockholder*, &c. They are distinctively organs of the business world, and as such are largely patronized.

CAUTION.—An inferior line of Gold Pens are being offered on the market, bearing the name of a dealer which resembles my stamp, I therefore advise the Trade when ordering goods to inquire if the salesman represents LEROY W. FAIRCHILD.

The reputation of the LEROY W. FAIRCHILD GOLD PENS has been sustained for over thirty years. Their superior qualities are acknowledged throughout the world, and they are to-day without noteworthy competition.

My New Illustrated Catalogue and Price-List combined, which represents New Designs in Pencases, and an exceedingly large line of Fine Novelties in Charm Pencils, &c., will be forwarded on application.

Every article being made at my Factories enables me to offer the very best advantages.

Leroy W. Fairchild.

OBITUARY.

C. H. CODMAN.

The funeral of C. H. Codman, of the firm of C. H. Codman & Co., dealers in photographic materials, Boston, was held on Saturday, the 22d inst., at the residence of the deceased, at Leponset, near Boston. The funeral was largely attended by parties from different sections. Among those in attendance from New York were V. M. Wilcox, of E. & H. T. Anthony & Co.; L. Degenert and Mr. Pattberg, of Pattberg Brothers, and W. I. Adams, of the Scoville Manufacturing Company. Mr. Codman's death was very sudden, being the result of an accident. On Monday, the 18th inst., while handling a vessel containing nitric acid it slipped from his grasp and fell to the floor. The fumes were inhaled by Mr. Codman, but no serious results were looked for, as he remained in the store in Boston all day, and was apparently unaffected or injured in any manner. His death, however, occurred the next day from the poison taken into his system. The deceased was fifty-four years of age, and was known to the trade from Maine to California.

BASE-BALL.

The New York Paper Trade and the Baltimore Paper Trade Base-ball Clubs participated in a friendly contest on Saturday afternoon last in Prospect Park, Brooklyn. On the opening of the game the New York nine won the choice of position and took the field.

The positions of the players in the field were as follows: Bishop, pitcher; Maynard, catcher; Pirnie, first base; Greenwood, second base; F. Lovell, third base; E. Lovell, right field; Cushing, short-stop; Hunt, centre field; Holder, left field.

The Baltimoreans began the contest in good style, Mr. Tucker being the first man to take the bat. He led off with a base hit. Mr. Dillon, the second man at the bat secured his base on an error of Mr. Cushing. Mr. Bird then took the bat and was thrown out by Mr. Bishop, who did some good pitching. Mr. Taylor was likewise easily disposed of on a fly ball to Greenwood, second baseman, who doubled up on Dillon. Tucker secured a score, but was quickly disposed of. The visitors then took the field, the members of the club occupying the following positions: Bird, catcher; Tucker, pitcher; Meikle, first base; Griffith, second base; Dillon, third base; Taylor, short stop; Hodges, left field; Bond, right field; Reese, centre field. The New Yorkers, by a few good hits, assisted by errors, succeeded in scoring six runs. The second innings for the Baltimoreans yielded them a cipher. On taking the bat the New Yorkers scored four runs. In the fourth inning of the New Yorkers, a brilliant catch of a hard hit line ball was made by Tucker, which yielded him a fine double play, with the assistance of Dillon, and stopped further scoring on the part of the New Yorkers.

The game was easily won by the New Yorkers at the end of the seventh inning. The success of the New Yorkers was due to greater practice, the Baltimore nine having played scarcely any during the past season. The defeat of the Baltimoreans was also due in part to the fact that they had to use a substitute for one of their best players, which somewhat crippled them. But, notwithstanding their want of practice, there was some good playing by the Baltimoreans. The playing of Tucker, Dillon and Hodges was especially creditable. The best playing on the part of the New Yorkers was

done by Maynard, Bishop, Pirnie and Greenwood. Out of ten games played this season the New Yorkers have lost three. This is a remarkably good record and it shows the advantage of practice. There was rather better stock in the Baltimore club, and had that club been equally favored as to practice, they would probably have been the victors.

The following is the score :

THE DINNER.

A complimentary dinner was given to the Baltimore nine by the New York nine in the evening at F. Martinelli's. The members of both clubs and some twenty or more guests, among whom were S. Webber Parker, T. H. Talson, of the firm of J. A. Dushane & Co., Baltimore; Frank Squier, Col. Van Wagoner, New York; M. B. Belden and A. J. Benjamin, sat down to the banquet at half-past eight. Mr. Parker presided. The party was in excellent spirits, and those, at least, who had only a short time previous been indulging in the manly exercise af-

forded in handling the bat and ball, were in proper condition to enjoy the menu. On behalf of the New York nine, the chairman welcomed the Baltimore guests in a few well-chosen remarks. The after-dinner speeches were numerous, and many pleasant remarks were made.

GLOSS-PRINTING.—Gloss-printing is done in two ways; one by using the gloss inks specially prepared for the purpose, the other by printing the gloss preparation on over the finished job or over that portion of it required to be glossed. To the inexperienced this is a difficult operation, attended by many failures. It is accomplished as follows: Prepare a tint block the exact size and shape to cover the printing to be glossed. The block should be of boxwood or hard metal—soft metal will not do. Fix it on the press and make it ready as for ordinary work, with a good even impression. Wash up the ink table, the rollers and the block itself thoroughly, removing the least trace of ink. Replace the rollers and distributors. Now, with a clean palette knife put a little of the gloss preparation on the cylinder or table, let it distribute for about a minute and then pull an impression. If it comes up perfectly clean the work may proceed, but if there are any signs of dirt, it is best to wash up again at once. While working the gloss keep the machine in motion, and should the gloss become too sticky (which it is apt to do) sprinkle a very little turpentine on the rollers. It is best to have a separate hand to put on the gloss, so as not to delay the feeder, and the sheets should be taken away at once, and laid out singly to dry. The two most important points are to have the machine clean and keep it in motion. After printing wash up the gloss quickly with benzine.—*Ex.*

ENGLISH HAND-MADE PAPERS

ORIGINAL
EYNSFORD
MILLS,

WATER-MARK:

FELLOWS

KENT,
ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

TESTIMONIALS.

"I am most emphatically pleased with the Prouty. I would not trade it for a C—press (price \$1,000.) It runs easier, it is much simpler, and does its work as rapidly and well"
J. F. MITCHELL, Greenville, Texas.
"Would not exchange it for any of the 'Big Injun' presses."
J. A. AVERY, Waukeegan, Ill.
"The Prouty is the "Boss press."
C. G. STARKS, Berlin, Wis.

"For the country office, printing 1000 to 4000 circulation, there is no other press worthy to be compared with it."
Waterloo TRIBUNE, Waterloo, Iowa.
"We profess to be a practical pressman, and having had experience with nearly all kinds of presses, believe ourselves to be a competent judge. The Prouty is the simplest and easiest running power press in the market, and will do as good work as any machine made." F. M. HAISLET, Newhampton, Iowa.

UNIT PUNCH.

Herewith is given an illustration of Lipman's "Unit" Punch, manufactured by H. L. Lipman, Philadelphia, Pa. This punch is designed for the use of people who, having manuscripts or papers of any kind to tie together, do not use eyelets, needing only a punch to make the necessary holes. It can be had for regular size X

or small size B, and the punches can be easily replaced, being interchangeable.

THE CHINESE FOOT-RULE.

A writer in the *North China Herald* gives some curious information respecting the foot measure in China. At present it varies largely in different parts of the country, and according to different trades; thus the foot of the carpenter's rule at Ningpo is less than 10, while that of the junk builders at Shanghai is nearly 16 inches. But a medium value of 12 inches is not uncommon. The standard foot of the Imperial Board of Works at Peking is $12\frac{1}{2}$ inches. A copper foot measure, dated A. D. 81, is still preserved, and is $9\frac{1}{2}$ inches in length. The width is 1 inch. The small copper coins, commonly called *cash*, were made of such a size, sometimes, as just to cover an inch on the foot-rule. In the course of two centuries it was found that the foot had increased half an inch, and a difference in the dimensions of musical instruments resulted. Want of harmony was the consequence, and accordingly, A. D. 247, a new measure, exactly 9 inches in length, was made the standard. Among the means employed for comparing the old and new foot are mentioned the gnomon of official sun-dials, and the length of certain jade tubes used according to old regulations as standards. One of these latter was so adjusted that an inch in breadth was equal to the breadth of 10 millet seeds. A hundred millet seeds or 10 inches was the foot. The Chinese foot is really based on the human hand, as is the European foot upon the foot. It strikes the Chinese as very incongruous when they hear that we measure cloth, woodwork, masonry, &c., which they regard as especially matters for the hand, by the foot. Of the jade tubes above mentioned there were 12, and these formed the basis for the measurement of liquids and solids 4,000 years ago. They are mentioned in the oldest Chinese documents with the astrolabe, the cycle of 60 years, and several of the oldest constellations. It is likely that they will be found to be an importation from Babylon, and in that case the Chinese foot is based on a Babylonian measure of a span, and should be 9 inches in length.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. Mfrs. of Bookbinders' Machinery and Tools.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

A Revolution in Stylographic Pens. } **THE KERNER.**
The Latest Improvement.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

LOUISVILLE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., September 29, 1883.

Trade is unqualifiedly good. The city is filled with visitors bent on business or pleasure, or both. The Southern Exposition is really a great affair, second only to the Centennial of all American expositions and the equal of it in many important features. The display of machinery in motion is very extensive; complete cotton and woolen mills are in operation, and the department of manufactures is in itself a grand show. The exhibits of the agricultural and mineral resources of the various States is comprehensive and will result in increased industrial development of the South; Northern visitors are particularly impressed with the great wealth of iron, coal and timber exhibited by sections which are popularly supposed to abound in nothing but tobacco or cotton lands.

The Art Gallery is filled with choice gems loaned by noted art collectors in all parts of the Union, and the collection here, as a whole, is pronounced never equaled on this continent. The music is the best that can be procured. Gilmore's daily concerts in the Exposition Park are frequently listened to by audiences numbering from 25,000 to 40,000 people, or as many as can get within hearing. The electric lighting, the electric railway which belts the grounds, the horticultural displays are also notable attractions.

It is no wonder, then, that Louisville is a lively city this fall, and cosmopolitan in tone and action. Concurrent with the Southern Exposition progress this has been a season of conventions here. Grand lodges, educational conventions, national charities associations and numerous other bodies composed of delegates from all the States have recently been in session here; the Bankers' Association of the United States convenes in this city on October 10, and is the first meeting of that important body ever held south of the Ohio River. The live-stock fair is just over, and the Jockey Club races have begun, continuing three weeks. The extraordinary hotel preparations made during the summer enable the visitors to find comfortable quarters; but there is no surplus room, the arrivals each day equalling, if not exceeding the number of departures, and none depart without expressing surprise and delight at the variety of entertainment afforded them here.

All of this means business, and explains why

most of the wholesale houses are working far into the night filling orders, and retailers find use for extra help. Trade is good throughout; the city has for once been properly advertised, and at the same time come to a proper appreciation of her advantages and opportunities. It is not a transient boom, but a substantial, vigorous and well-grounded new departure on to a higher plane of commercial activity.

Coming to the stationery trade, it is the best ever done here, every house reporting increased trade for the past two months. The consumption of paper of all grades, was never so large; visiting cards, note papers, printing papers and wrapping papers are all meeting with a free demand and ready sale. This will be Louisville's blue ribbon year in every branch of trade.

BOURBON.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Aug. 25, 1883.

The "silly season" is upon us; the fashionable and parliamentary life of the year has departed from our midst; beauty has taken itself off to Scarborough or Trouville, and legislation is devoting itself to the interests (or otherwise) of grouse and partridge. Now is the time for the crotchet-monger to get his oft-rejected letter to the *Times* inserted, for even the "Thunderer" is glad of padding now. Now is the time when the monster gooseberry makes its appearance and the great sea-serpent becomes once more visible. London is generally reported in the society journals to be absolutely empty; that is to say, there are not more than four millions or so of inhabitants left to stew and broil in the streets of the dingy city, the most of them to struggle and strive for the privilege of enabling others to take things easy. Well, as the greatest happiness is supposed to consist in the giving of pleasure to others, the laboring classes of the English metropolis at any rate ought to be supremely delighted and content.

Naturally, there is not much to report in the way of "things new," the general quiet and recreation being shared in by manufacturer and the trader, among the rest. Many firms are doing their best to clear out old stock to make way for fresher goods, others are taking advantage of the lull to get their shops and warehouses cleansed and brightened up. In the case of the firms who are selling-off, cheapness is the order of the day; for instance, a retailer a few doors from this office is offering packets of 25 square-shaped envelopes of as good a quality as

one could desire for ordinary correspondence, both white and gray for three half-pence (1½d.) A few years ago the same article would not possibly have been sold at a profit under three times the price. When the downward tendency will stop it is difficult to say, something certainly should be done to arrest it. Speaking of low prices reminds me that a country draper is selling a complete edition of "Oliver Twist," well printed on decent paper for the sum of one penny, of course it is intended as an advertisement, but what will be the effect if this sort of competition is added to that already existing in the stationery and bookselling trades?

At the recent Stationery and Printing Trades Exhibition, a chronological chart, synchronistically and ethnologically arranged, was exhibited by Hayman Brothers & Lilly, of Hatton House, Farringdon road, London. It is a marvel of ingenuity and compositorial art. The progression of time in decades and centuries is represented by vertical lines beginning at the right. Various tints and many kinds of type in black and red, have been employed and the greatest care has been taken in the printing. Its length is nearly 20 feet and its width 18 inches. Its arrangement was the work of Edward John Ensor, Officier d'Académie de l'Université de France.

Raphael Tuck & Sons, to whom might very well be applied Tennyson's words, for they are "ever seeking something new; that which they have done, but earnest of the things that they will do," have given especial attention of late to the production of terra-cotta articles of ornament, and use such as vases, plaques, card-trays, &c., with the result of being able to offer at remarkably low prices various ornamented objects which are in an eminent degree suitable additions to the stock of the stationer and fancy trader. The well-known Watcombe Terra-cotta Works supply the articles to which all the most charming designs of Christmas cards and other subjects are transferred by a patented process. The effect is exceedingly pleasing, and the price so moderate that the articles are sure to sell.

Another novelty by the same firm is in preparation. It is a four fold ebonized screen in the panels of which are facsimile reproductions of beautiful flower subjects from the hand of an eminent painter, the originals of which cost hundreds of pounds. On the reverse side are representations of reeds and waterfowl on a rich gold ground. Altogether this is one of the most ambitious of Messrs. Tucks' efforts, and only a large sale can repay the heavy outlay on the production.

The same firm is preparing (apropos of the forthcoming Luther celebration) a set of four small portraits of the great German reformer,

from original paintings in the gallery at Wittenberg. These are facsimile copies, except as regards size, and are perhaps the finest specimens of chromo work applied to portraits yet seen in this country. The ex-monk is represented at various stages of his life and quotations from his utterances are appended. The set will be published to retail at 6d.

Some new embossed floral text-cards issued by Messrs. Tuck are remarkably fine specimens of color printing and sharpness of outline.

W. F. C.

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Sept. 8, 1883.

Judging by the number of shops which have recently sprung up in various quarters of the town at which the production of American manufactories are the principal, and in many cases, the only articles displayed, the importation of these goods must have largely increased of late. In almost any of the leading thoroughfares are to be seen attractive shows of American fancy articles and notions, round which an admiring crowd seems always to be gathered, while the appearance of the interior by no means belies the promise of the outside, so far as business is concerned. Moreover the trade is a lucrative one, American goods bearing a better profit than home made ones. Hitherto the class of goods sold has been for the most part apparently those selling for a few pence, or shillings at the outside, but there is a taste growing up among the public for American productions generally, and there is no reason why a much larger trade in them should not be done in this country.

It is to be hoped, however, that American merchants and exporters will not make the mistake, with regard to us, which our wholesale men have made in their dealings with the colonies. Many of them, at any rate, have apparently acted on the notion that anything is good enough for the Australians or New Zealanders, and have accordingly shipped off any quantity of "stale, flat and unprofitable" stuff that had been rejected in the home market, and refused by the foreign shippers at any price. Indeed, the treatment of colonial customers by English houses is a standing reproach to their reputation for enterprise and fair dealing, and the only wonder is that the American exporters have not beaten them entirely out of the colonial market. As it is, reports from the antipodes speak of the greater promptitude with which goods can be obtained from the United States than from England, and of the superior enterprise and greater attention and courtesy shown by the merchants of New York and Chicago, to that of the men of London and Birmingham.

The card-scoring machine, of which Strachan & Henshaw, of Victoria street, Bristol, are the makers and patentees, is an article of a simple character and moderate price. It will score every description of cards, programmes, reminders, &c., so as to render them easily folded. It is worked by placing the card to be scored upon a smooth, level surface-plate, the side to be scored upward, the top edge having been laid against the head guide, and the exact line of the fold brought under the knife, the side-lay is placed against the side of the card, the screw locked and the scoring done. It is claimed by the makers that the process is so simple and expeditious that a young girl or boy can score 1,500 to 2,000 cards to an equal depth in an hour. The machine is made in three qualities, and can be worked by hand, treadle or

steam power. The prices range from £2 2s. to £11.

A neat and expeditious little press for printing visiting cards is made by Watson, Kampe & Co., of High Holborn, London. It seems to be in every way effective, while its price is so moderate that there is no reason why stationers should not possess themselves of an article by means of which they may add somewhat to their incomes, besides deriving advantage from its use for their own ticket printing, &c.

At the recent Stationer and Printing Exhibition nothing was more admired than the splendid specimens of printing shown by Thomas Hailing, of the Oxford Works, Cheltenham, including that gentleman's quarterly circular. It cannot be denied that in recent years great progress has been made in this country in the art of clean and tasteful printing, and to Mr. Hailing is the credit of this progress largely due. By introducing the new founts of the American founders, as well as by taking up the productions of our own, and still more by showing the printers generally how to use the good things when they have got them, how to secure effective display combined with harmony and good taste, Mr. Hailing has earned the appreciation and good will of the entire trade, and indeed of all who believe in the *utile dulci* principle applied to industry.

Every one who has much writing to do appreciates a good pen, but opinions differ amazingly as to wherein goodness consists, tastes varying in this matter almost as much as they do in such matters as the merits of Whistler, Burns-Jones, or Mrs. Langtry. But it must be an exacting critic that cannot be pleased with one or other of the pens upon which our judgment is invited by Letts, Son & Co., of King William street, London Bridge. This firm's "diamond-pointed" pens range in breadth from the broadest "J" to the finest point it is possible to put on a pen—one scarcely thicker than that of a needle—are all remarkably free from anything like "scratchiness" or spluttering, the finest pointed never catching the paper, and the coarsest having no tendency to empty themselves in big blots, to the blots and confusion of the writer. My own favorite is the "Rapid Writer," which I regard as an undisputed blessing, especially to an indifferent penman like myself. In holders, &c., Letts, Son & Co. have a number of varieties worthy of the pens I have described, while of their productions in various other branches of the trade I may have something to say on a future occasion.

W. F. C.

THE METROPOLITAN DAILY PRESS.

X.

The New York evening papers, with two or three exceptions, are journals of comparatively recent origin. Subsequently to 1865, several evening papers were started, notably the *Gazette*, the *Mail*, the *Globe*, the *Republic*, the *Free Press*, the *Telegram*, the *Leader*, the *Graphic*, the *Commonwealth* and the *Evening Times*. The *Telegram* and the *Graphic* only remain. The *News*, the *Post*, the *Express* (now consolidated with the *Mail*), and the *Commercial Advertiser* are the oldest evening papers in the city. The evening (English) press is at present composed of the *Post*, the *Graphic*, the *Telegram*, the *News*, the *Commercial Advertiser* and the *Mail-Express*.

THE MAIL-EXPRESS.

In alluding to the history of the *Mail-Express*, it will be necessary to speak of the history of the

journals whose individuality were swallowed up by that paper.

The *Express* was started by James and Erasmus Brooks on June 20, 1836, as a Whig paper. The *Express* was somewhat remarkable for its politics, its numerous editions and its editorials which seemed hurriedly written and had a sort of homely vigor. It issued for a long while in the earlier part of its career both morning and evening editions, but the morning edition was subsequently suspended, when it became exclusively an evening paper. A few years before its consolidation with the *Mail* it drifted into the ranks of the Democracy, when it fell into the hands of John Kelly, the well-known leader of the Tammany Hall Society. The *Evening Mail* was a pleasant tea-table paper, edited by Jonas M. Bundy. It was rather independent in politics. A short time before the consolidation of the two papers the *Mail* was purchased by Cyrus W. Field, who a year or ago bought the *Express*. The *Mail-Express* is at present owned by him, and Major Bundy, who was attached to the *Mail* in its early history, is the editor of the new paper.

THE POST.

The *Post* was first issued on November 16, 1801. It was a Federal paper, and such men as Alexander Hamilton and John Jay aided in its establishment. Indeed, it was considered an organ of Hamilton. It was edited by William Coleman, a Massachusetts journalist. John Bigelow purchased an interest in the *Post* in 1848, and added largely to its prosperity. In 1826 William Cullen Bryant, who became distinguished as a poet, began to write for the *Post*, and afterward became its editor and proprietor. Mr. Bryant's death occurred a few years ago. The paper is now published by a company of stockholders, and Carl Schurz, formerly a member of the United States Senate and late Secretary of the Interior, and a distinguished political writer and orator, is its chief editor.

THE COMMERCIAL ADVERTISER.

The *Commercial Advertiser* is the oldest daily newspaper in the metropolis. It was started in 1794 by Zachariah Lewis. In 1816 its circulation had reached 1,200. It is devoted mostly to commercial matters, but also makes considerable pretensions as a newspaper. It is a sheet similar to the *Journal of Commerce*, with the exception that it publishes more news than that paper. Latterly, its editor and proprietor has been Hugh J. Hastings, one of the old-time journalists. He became connected with the paper in 1868. It was then under the direction of the late Thurlow Weed, who, being ill, soon after retired, when Mr. Hastings secured a controlling interest, took the helm, and made it a lively sheet. Its circulation wonderfully increased under his management, and the paper became a first-class paying property. It is stated on good authority that Mr. Hastings not long ago refused \$500,000 for his interest in it.

The *Advertiser* recently lost its distinguished editor by death. The future editorial and business management of the paper has not been announced.

The daily circulation of the *Commercial Advertiser* probably does not exceed 20,000.

Parchment paper may be rendered impervious to oils by steeping in a hot solution of gelatine, to which $2\frac{1}{2}$ or 3 per cent. of glycerine has been added, and drying. To render the same paper waterproof, it is soaked in sulphuret of carbon, containing in the solution 1 per cent. of linseed oil, and 4 per cent. of caoutchouc.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by MRS. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

PERFORATING ATTACHMENT FOR CYLINDER PRINTING PRESSES.

This is a late invention by a well-known New York printer, and one which is intended to supply a want long felt, and to be a time and money-saving appliance to all engaged in the printing business.

By the use of this attachment, which can be used upon every style of cylinder printing-press, all kinds of paper or cardboard intended for checks, drafts, certificates, coupon tickets, &c., can be perforated at the time of printing, that is, with the one operation, so as to admit of separation from each other and the stub or bound book with the greatest facility. Any number of these attachments may be used at the same time, making as many perforations as desired. As it perforates in a perfectly straight, clean, white line, leaving no ink marks or blurs to follow its course, it can be used for the finest kinds of check-book and certificate work, as well as on the most ordinary printing, without requiring any more care than would be necessary to give to the press-work of a job if the attachment was not being used. Any pressman can quickly attach or detach it.

This attachment consists in having arranged between the two side frames of the press a round rod. This may be placed parallel and near to the cylinder, or it can be an ordinary fender rod, which occupies the same position. In the larger end of the stock of the attachment is an opening, the sides of which form lugs. One of the lugs is concaved to fit the rod, and through the other lug a screw is inserted, and bearing upon the rod, serves to secure the attachment. In the concave recess in the lug is a smaller notch, which bites upon the rod and aids in firmly securing the attachment.

At its forward end the stock has a lug in which is a slot. The perforating wheel consists in having a serrated or toothed beveled edge. The journal of the perforating wheel passes through a slot, and is fitted in a bearing secured to the free end of a spring, which is fastened at the other end to the stock. Through the stock is inserted an adjusting screw, which rests upon the bearing and serves for adjusting it downward until the pivot strikes the bottom of the slot, and when the screw is loosened the bearing and the perforating wheel are returned by the spring. The adjustable bearing enables the wheel to be moved toward or from the surface of the cylinder after the stock is rigidly secured to the rod, so as to regulate the depth of the perforations in the paper or cardboard.

This attachment is controlled by E. A. Fixman, New York.

IMITATION FRENCH HAMMERED LAMPS.

The real hammered-French lamps are very expensive, but notwithstanding their cost they have proved very popular. They are very ornamental, and the genuine article is made by hand, which is one reason for its costliness in comparison with other goods. The popularity of the real article has lately led to the production of these goods by machinery, and hence now a fine imitation hammered lamp is produced in this country, and its production by ma-

PERFORATING ATTACHMENT.

chinery renders it comparatively reasonable in price.

Herewith are given two cuts of these novelties.

HAMMERED LAMPS.

Though counterfeits of the real hammered brass lamps they cannot be told from the genuine except on close inspection. They are manufactured by C. F. A. Hinricks. Each lamp has a patent duplex burner called the "Salamander" non-combustible argand burner. This burner has a non-combustible wick-top, which is always ready for use, has an even surface and creates

no cinders. It requires neither trimming, tying nor fastening of any kind. The body of the lamps are dark bronze with real and high brass relief figures, foliage and other ornamentations. The lamps are finished in bronze and other colors and are provided with gold and silver trimmings and fancy decorated shades. They are made in five styles: Bronze lamp with wreath ornamentation; bronze elephant lamp; bronze vase lamp, with handles; bronze basket lamp, with owl; bronze vase lamp with cricket. The two cuts show the first and fourth styles mentioned. The designs, it will be seen, are quite elaborate as well as ornate, and will probably excite a popular demand.

HAND-CUTTER, WITH STEAM FIXTURE.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head.* The trade are requested to forward descriptions with samples in order to secure proper notice.

John Geiger, printer, Aledo, Ill., died a few days ago.

E. L. Knapp, printer, Peotone, Ill., was recently burned out.

Milton Sears, of Daniel Slote & Co., has gone South on a business trip.

The *Society Record* Company, Salt Lake City, Utah, has removed to Kansas.

John G. Chambers, stationer, Ogden City, Utah, has made an assignment.

David Main, publisher, *St. Croix Courier*, St. Stephen, N. B., died recently.

J. J. Ambler & Co., booksellers and stationers, Lynchburg, Va., are advertising to sell out.

S. J. Blades & Co., manufacturers of ticket cases, Chicago, Ill., have been burned out. Loss \$2,000; not insured.

An advertisement signed "Wide Awake," will be found in another column. It deserves attention.

The stationery stock of the estate of G. M. Franklin, Hamilton, Ont., has been sold to John Riach.

Drake & Co., manufacturers of picture frames, Chicago, Ill., were burned out a few days ago. Loss, \$1,500; not insured.

Marder, Luse & Co. of the Chicago Type Foundry, Chicago, Ill., have been incorporated, with paid in capital of \$350,000.

W. T. Davis, printer, Adams, Mass., has admitted E. E. Wensley into partnership. The firm will be known as Davis & Wensley.

Cutler & West, manufacturers of fancy wood boxes, Springfield, Mass., have dissolved partnership. F. M. West continues the business.

A dissolution has taken place in the firm of Roberts & Bradley, publishers and printers, Mound City, Ill. A new firm has been formed under the style of L. M. Bradley & Co.

Joseph Eichbaum & Co., Pittsburg, Pa., have issued a very handsomely printed circular and accompany it with a business of novel effect. This firm has taken its position in the ranks of artistic printers.

The new toys and games brought out by Milton Bradley & Co. this season will challenge attention everywhere. The American Fire Department is a novelty, "just to please the boys," and Bombardment will suit older as well as young heads. The firm has introduced some new series of zoetrope pictures, including Professor Muybridge's photographs of animals in motion.

Owing to the largely-increased trade of C. F. A. Hinrichs, he has recently occupied the whole of the building at Nos. 29 31 and 33 Park place. The arrangement of the goods on the ground floor has been made with excellent taste as well as a nice regard for artistic effect. Mr. Hinrichs is bringing out this season a very fine and large variety of hammered lamps in brass and other metals, which, with his patent student lamps, make his stock very complete. Mr. Hinrichs has also brought out a new line of porcelain and bisque figures, baskets, vases, &c., ornamented with imitations of various flowers.

The Powers Paper Company, J. L. St. John, agent, 62 and 64 Duane street, has issued to the trade its latest envelope price-list, which is one of the most complete lists ever published. In addition to its fine lines which was very extensive, it has added new qualities and styles to regular stock, heretofore made only to order, and is furnishing the same in all the tints now in popular favor, determined that every reasonable requirement of the trade shall be met as fully as is possible for any manufacturer so to do. Its trade in Christmas card sizes has been very large this season. Having every facility in manufacturing, it continues to sell at bottom prices. In hand-made goods requiring odd forms and shapes, it can meet every demand, having recently added new machinery whereby many of the difficulties of making these goods have been greatly obviated, and the saving in cost thereby is given the purchaser. Its export trade is rapidly growing to be a very important factor in their business and the reputation of its celebrated "Perfection Linen," having reached the Brazilian market resulted in the shipment of large orders to one of the largest English houses there.

The following named out of town dealers were in the city during the past week: Ernest Besser, Buffalo, N. Y.; a representative of the Northern News Company, Troy, N. Y.; George Weber, Utica, N. Y.; S. P. Metzger, Vicksburg, Miss.; Joseph Brothers, Belfast, Pa.; Mr. Boughton, of Boughton & McCann, Hannibal, Mo.; Mr. Wheeler, of Wheeler & Osborn, Nashville, Tenn.; Mr. Wright, of Clarke & Co., Vicksburg, Va.; J. Moody, of Moody & Son, Hamilton, Ont.; Frank B. Taylor, Jackson, Mich.; Samuel Everett, Zanesville, Ohio; G. W. Baldwin, Houston, Tex.; J. M. Kane, of J. M. Kane & Brother, Fort Wayne, Ind.; J. F. Price, Beatrice, Neb.; Mr. King, representing Allen C. Kerr, Pittsburg, Pa.

George B. Hurd & Co., dealers in fine stationery, &c., have lately introduced a novelty in writing paper called Persian. It is a fancy-figured paper, which they have in cream and white. They also show two new shades in Crane's superfine and extra superfine quality—viz., turtle green and tabac. To meet the demand for general advertising, they have also brought out what is called a sealing circular, or a combination of a sheet of note-paper with an envelope. Under the new postal regulations, they expect a large demand for this.

Leroy W. Fairchild will have his new illustrated catalogue ready for the trade next week. Mr. Fairchild has spared no pains to make this catalogue first-class in every respect. It will contain a price list, and the engravings will be very fine. It will have illustrations of an endless variety of fall and holiday goods.

Ralph Trautmann will soon bring out some new things in his line. His recent publications, embracing a set of portraits of the different presidents of the United States and a complete set of portraits of eminent authors, are selling well and are increasing in popularity.

Barlow Brothers, binders and paper-box manufacturers, Grand Rapids, Mich., are moving from their old quarters in the Ledyard block to the new Houseman block.

The sheriff has postponed the sale of the stock of J. G. Miller & Co., printers and bookbinders, Philadelphia, Pa., which was advertised to be sold on the 27th ult.

The Ontario Toy Company (incorporated), manufacturer of children's carriages, &c., London, Ont., has been attached by the sheriff.

Margaret Higgins, paper-stock dealer, Philadelphia, Pa., is dead.

Alfred Davis, paper-stock dealer, Oakland, Cal., has been attached.

Toddings & Mosher, printers, New York city, have made an assignment.

Charles Bessener, publisher, of the *Watchman*, Walla Walla, W. T., has sold out.

Lones Brothers, booksellers, Upper Sandusky, Ohio, have sold out to R. J. Atkinson.

M. F. Mack, has bought out the stationery business of A. J. McLeod, Livermore, Cal.

John F. Olsson has bought out Charles A. Janson, dealer in pictures, Cambridge, Mass.

The *Fairfield Journal*, published by A. B. Allen, at Fairfield, Me., has been damaged by water.

J. A. Bear, publisher of the *Lawrence County Times*, Walnut Ridge, Ark., is advertising to sell out.

W. S. Hodges, publisher of the *Alta Arizona*, Mineral Park, Arizona, has sold out to Anson H. Smith & Co.

The firm of Hastings, Todd & Schanek, dealers in cardboard, New York city, has dissolved. Hastings & Todd continue the business.

A dissolution of partnership has taken place in the firm of Jung & Butler, publishers, Nebraska City, Neb. The business will be continued by Jacob Butler.

William Mann has issued a new list and discount on his line of copying books. Some prices have been advanced and others have been lowered. He states that the sales on copying paper are greater than at any time since he has been in business.

Rutledge & Co's Mad River paper mill at Dayton, Ohio, was sold on Saturday, September 22, by F. M. Nixon, assignee to Biedinger & Diem, of Cincinnati, who will put the mill in first-class condition and run it on straw and rag wrapping papers.

Henry Levy & Son, 477 Broadway, have just received a splendid assortment of ladies and gentlemen's dressing cases, useful and tastefully fitted with every requisite for the toilet, covered in morocco, russia, and alligator leather; also, an elegant assortment of photographic albums, which deserve the attention of buyers.

F. H. Loss, Jr., 46 Murray street, has just received a large invoice of artistic wood carvings for the holiday season, very novel in design and exquisite in workmanship. For the convenience of the trade who cannot visit New York and inspect this splendid stock, Mr. Loss has concluded to make up assorted cases of these goods, marked and priced, which can be duplicated in any reasonable quantity if ordered not too late in the season. Send for descriptive price list.

Wilson Brothers, manufacturers of and dealers in toys, &c., have just brought out an entire new line of toys, whips and horse-reins. The demand for these goods has already become so great that it has been almost impossible to keep up the supply, notwithstanding the additional machinery which the firm has lately put in its establishment. The firm also announces several other novelties, one of which is a toy game cabinet, embracing twenty to thirty different games—in fact being an assorted line of games, in combination, in one box. It has also a new thing in the line of rocking-horses. This comes in different shapes, representing a sheep, a lion and "Jumbo," the elephant. They are reasonable in price and very durable. Wilson Brothers are having a large export trade in

baby carriages, which is the result of judicious advertising.

Geo. W. Jenks, printer, Minneapolis, Minn., has sold out.

Homans & Banks, publishers, New York city, have dissolved partnership.

D. Wentworth, bookseller and stationer, Portland, Me., has sold out his business.

An attachment has been issued against A. J. Coghill, stationer, San Francisco, Cal.

H. Z. Burkhardt & Co., booksellers and stationers, Hailey, Idaho, have been burned out.

The firm of H. E. Goodrich & Co., booksellers and stationers, Paola, Kan., is closing out its business.

The office of the *Ruby Hill Mining News*, W. J. Penrose proprietor, Ruby Hill, Nev., has been burned out.

Spencer & Banfleeth, printers, Philadelphia, Pa., have been damaged by fire. Loss about \$1,000; fully insured.

Ward & Gay, Boston, lately bought the stock and good-will of I. W. Moody, of West street, formerly Proctor & Moody.

The United States Reproduction Company, Philadelphia, has been damaged by fire to the extent of from \$4,000 to \$5,000. Insured.

Alvah Bushnell, Philadelphia, will have ready in a few days a full line of calendars for sale to the trade. Among them are some very elegant desk calendars.

At a meeting of the Pennsylvania Slate Association, held on Thursday, September 27, it was agreed by all of the members to close their factories and cease manufacturing school slates for sixty days from October 1.

The firm of M. A. Reay has added several new things in the line of holiday goods to its stock. This firm makes a specialty of Christmas cards, of which it carries a very large and complete assortment.

The back building of the Philadelphia office of L. Prang & Co. was on fire last week. By the prompt action of Charles R. Kimball, the manager for the firm, the fire was extinguished before causing much damage.

Mr. Dinsmore, of the firm of Carter, Dinsmore & Co., returned this week from an extended Western trip. He found in his travels that the fame of the "Arabin Mucilage" and the "Koal Black Ink," which are the manufactures of his firm, had preceded him, and his sales of those goods were very large in consequence.

Selchow & Righter have this week introduced to the trade a novelty in toy cubes. The sides of the cubes are four inches square. Two sides are covered with views of country scenes, in which various bipeds and quadrupeds figure prominently, making all sorts of amusing and interesting combinations. There are twelve cubes in the set, which comes in a handsome leather-covered box.

"Gema from the Kindergarten" is a collection of Kindergarten occupations, in one package, designed for use at home. It is got up by Milton Bradley & Co., who have also brought out several new lines of alphabet and picture blocks, building blocks, puzzles, &c., which are very taking. The "Self-Counter and Alphabet" blocks are a combination of thirty alphabet and numeral blocks which invite instruction and amusement in their use. The same firm has also produced some new designs in work-boxes.

Moser & Lyon, stationers, &c., Syracuse, N. Y., were burned out on September 25. The stock was almost destroyed, the loss being about \$30,000; insured for \$30,000 to \$40,000. The firm has secured new quarters and has been engaged during the past week in restocking.

The schedules in the assignment of John S. Cole, surviving partner of Roby & Cole, to John M. Reed, which were filed on Monday in the Court of Common Pleas, state: Liabilities, \$7,941.89; nominal assets, \$12,908.52, and actual assets, \$6,107.33.

J. G. Ditman, the well-known Philadelphia paper merchant, who has been confined to his bed with typhoid fever, is rapidly recovering, and expects to be at his business post in a few days.

A. Hamilton, bookseller and stationer, Steubenville, Ohio, has made an assignment to John A. Kithcart.

Beach Brothers, publishers, Stromsburg, Neb., have dissolved partnership.

G. A. Odell, stationer and fancy goods dealer, Ingersoll, Ont., has sold out to A. Robinson.

Jansen, McClurg & Co., Chicago, have in press the "Life of Wagner," Professor Swings' "Sermons," "Julian's "Political Recollections," and several other works.

George W. Arms, of the firm of George W. Arms & Co., Philadelphia, fell through a hatchway and had his shoulder dislocated a few days ago. Although he suffered greatly, his recovery is only a question of time.

The *Musical Courier*, the only first-class musical paper printed in the United States, comes out this week enlarged by the addition of four pages. It is a bright, crisp and intelligent journal and deserves its success. Blumenberg & Floersheim, 25 East Fourteenth street, are the publishers.

William A. Davis, 18 Arch street, Boston, and 155 Wabash avenue, Chicago, has already received duplicate orders from some of the United States Government departments for his celebrated United States Treasury Mucilage, Treasury Crimson Fluid Ink and other articles of his manufacture. His Treasury Crimson Fluid Ink, Stylographic Ink and new Wide-Mouth "Sensible" Mucilage stands with black enameled caps for United States Treasury Mucilage are selling exceedingly well with the trade, as his goods have always proven to be as represented. Mr. Davis has added more room to his manufacturing department at Boston, making now four large floors extending from Arch to Devonshire streets.

OBITUARY.

CHARLES MAGARGE.

Charles Magarge, the well-known paper manufacturer, died on Monday, after a brief illness, at his residence, Tulpehocken and Main streets, Germantown, in the eightieth year of his age.

Mr. Magarge was born in Philadelphia, September 30, 1804. His father was a farmer and miller, but the son, after receiving a fair education, was brought up to business, and shortly after 1833 established with his brother, W. H. Magarge, a paper warehouse on Commerce street, near Sixth, where he afterward built up so extensive and valuable a trade.

In 1843 the firm-name was changed in consequence of the death of the junior partner, and becoming Charles Magarge & Co., so continued till the senior member retired from business. In 1845 Mr. Magarge purchased a brick building on the Wissahickon and converted it into a paper mill, and in 1858 enlarged his manufacturing operations till he had in all three establishments known as the Wissahickon and Hanwell Mills. He had previously erected the large warehouse at Sixth and Jayne streets, which he afterward occupied for some twenty years. Meantime his business talents had engaged the attention of his fellow-citizens. In 1848 he was elected president of the Germantown Bank and carried that institution successfully through its financial troubles, and immediately after consolidation he was elected a member of Councils by the old line Whigs, of whose party he was long a prominent and active member. He was also for some years one of the vestrymen of St. Luke's Protestant Episcopal Church, Germantown. In his business, both as a manufacturer of and a dealer in paper, he prospered greatly, building up extensive connections with the Eastern manufacturers, so that for many years his was the leading paper house in Philadelphia.

The following from a sketch published some years ago, is so true that it is worth repeating: "Genial and hospitable in social intercourse; sound and reliable in business judgment; earnest and liberal in the day of prosperity; resolute and just in the hour of disaster, Mr. Magarge was not less to be admired than imitated in all the relations of life."

Since 1878 he had lived in retirement. An injury to one of his limbs had made him for years somewhat of an invalid, and of late his general health had seemed to be failing, but no complaint of a local character had definitely announced its presence in his system, and only on Wednesday of last week he left his residence and walked some distance to look at a fire. He must at that time have taken cold that settled on his kidneys, and gave a final impulse to an occult affection of those organs, which, by Friday, made a delicate and painful operation imperative. It was successfully performed by Dr. D. Hayes Agnew, but the advanced age of the patient rendered it impossible for him to rally under the shock. Mr. Magarge's children consisted of two sons, both deceased, and two daughters, who, with his wife, survive him.

DAVID A. WOODWARD.

The many friends of David A. Woodward, Jr., lately with the Plimpton Manufacturing Company, will be surprised to learn of his death, which occurred at Hartford, Conn., on September 21. He is said to have been an honest and upright employe and a truthful and conscientious salesman, beloved by all who knew him.

The light of friendship is like the light of phosphorus—seen plainest when all around is dark.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 4, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

The trade situation is thought to be favorable. Keep it so.

RETURNS of our foreign trade up to the end of August show that the exports of the country during the month exceeded the imports by \$2,984,843 in value. The excess of values of exports for the eight months of the calendar year was \$45,139,409, and for the twelve months ended with August, \$113,906,355. The increase in export values during the period last mentioned was nearly \$90,000,000, the import values showing a decrease. When it is remembered that lower prices have obtained on nearly all lines of American products and manufactures, the increase in export values must indicate a more extended export as to quantities. This is proof of the growth of our trade and of the greater amount of goods with which we are supplying other than home markets. THE STATIONER has directed attention to the enlarged list of exports which appear in its columns from week to week, and has suggested that the trade who are not yet interested should try to share in the results of the growing demand. We renew this suggestion and urge the importance of seeking out and deriving new connections which will be profitable.

AN international exhibition of electricity and electrical appliances is to be held at Philadelphia in September of next year, under the auspices of the Franklin Institute. There is a fitness in this which is apparent. Philadelphia was the home of Franklin, who directed attention to the science of electricity, and the institution founded in his name is properly the one to supervise an exhibition of the latest achievements in electrical development. This will be the first exhibition in this country exclusively devoted to the branch of science indicated. There have been exhibitions in other countries, and they have been wonderful in their results, and as aids to invention and discovery. We may reasonably hope that 1884 will disclose an advance not yet attained in this direction. Articles for exhibition only will pass our customs—under an act of Congress—free of duty. We have received the circular of the institute, setting forth the project, and we are sure that, as it states, “no effort will be spared by the Franklin Institute to secure a large and important representation of the progress of foreign countries, and that the most liberal provisions will be made to place European and American exhibitors on a fair and equal footing.” It is given out that any information required by exhibitors, including the classification of exhibits, regulations for the entry of articles for competition, advices as to the best modes of transportation, custom-house regulations, and all other needful information, will be furnished to parties making application for space for exhibition. Such applications should be made to the secretary, Franklin Institute, Philadelphia, Pa., U. S. A.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

Boston men are feeling the effects of political excitement, and are beginning to realize that there is business in the ferment.

* * * *

Speaking of Boston men, there were a few of them in New York during the present week. They seemed to have had a good time; that is judging from certain indications noticeable on their way to the boat. “Steady on the right!” This was a difficult manœuvre.

* * * *

One of the “Ancients” was observed to ogle a pretty girl on Broadway. He was on the sidewalk and the “mash” was evident. He looked and she looked. He waited at the corner and she turned and smiled, and his gaze followed her until she was lost in the throng. I think that she was admiring his long white beard. Ah, General, if that lady on the Back Bay had only seen you!

* * * *

A very satisfactory feeling seems to prevail in the stationery trade. Business is really good, so it is said, and the situation is not uncomfortable. Let us hope that this state of affairs will continue.

* * * *

Everything now is æsthetic *de rigueur*. Harmonies are sought in everything. If a lady writes a letter, she must study her surroundings. Her dresses must not accord ill with her house furnishings. Note paper and envelopes are tinted to match every shade of color in wearing apparel, and the papeteries are “toney” to the highest degree. Even the boxes are enveloped in elegant plushes which match the tints of the papers which they contain. The most delicate fancies prevail, and there are colors to suit brunettes as well as blondes. This involves greater expense for the women, but it is money in the stationer's pocket. The papeterie in all of its appointments should harmonize with the dress worn. Ergo, every dress should have a papeterie to match.

* * * *

The manufacturers of school slates have agreed, I perceive, to suspend production for sixty days. We now know what the limit of life for a school slate is. The trade must have got it down pretty fine. The breakage during the ensuing sixty days is expected to create a lively demand, and work during the winter will be well sustained. There is a great deal of prevision about this action of the slate manufacturers.

* * * *

There is a young man in the trade who wears No. 14 shoes. He sighs over his “hoofs,” but that don't alter the size of 'em. As he is unmarried, his friends acting on the principle of “keeping up the strain,” are about to import a Chicago girl to marry him to. The difficulty is to avoid too large an importation, and some trouble is expected in finding a young lady whose extremities can come down to his gauge.

* * * *

There has been an international exhibition at Amsterdam. In looking over the list of awards I find a few American names which have secured honors. But, what puzzles me is the fact that the awards were made under a classification which seems strangely incongruous. For instance, the Marvin safes are classified under the head of “Alimentary Products.” Good gracious!

* * * *

Dutchmen must have tremendous digest-

ive powers. We all know that they are men of capacity, but it takes a good deal of rotundity to contain a Marvin safe. Of course, it has to go down whole.

There are a few other things which are placed in the same classification. Among them are Mason & Hamlin organs, Gemunder's violins, Ithaca and Shoninger organs, and last, but not least, our friends of school furniture and school slate, &c., fame—A. H. Andrews & Co., Chicago—are distinguished under the same head. I observe that the classification further includes chemical products, but even these are subjunctive to the leading head of "Alimentary" exhibits. Just think of Andrews & Co. being classified with pork, and Marvin & Co. with pickles.

Newsdealers and newspapers are getting mutually excited. The first will not sell the latter, except at an advance on the regular price, and the *Herald*, getting its "dander up," is organizing an army of vendors with whom to fight back. It is now engaged in "mobilizing" its forces, and when it gets ready, will "scoop" the trade and make a "heap o' trouble" for the opposition.

"Live and Let Live" is a good precept, but the question is whether the newsdealers are not assuming too much when they undertake to dictate terms to the newspapers. Of course, they have the right to buy as cheaply as they can, and sell their wares for as much money as they can get, but I don't like to hear threats against parties who choose to accept the new arrangements and are willing to supply papers at the regular price. Violence ought not to be tolerated, and yet it is threatened.

What I want to know! Have I frightened that good-looking attendant on the envelope machine in William street? I wait for reply. Perhaps the gentleman who belongs to a well-known club, located not far from Twenty-first street, and who is known to have an interest in the machine alluded to, can tell me. Said attendant is not "on post."

I saw Charley—standing in the doorway of his store the other day. He was all "broke up." Rather a dashing brunette had just crossed his vision, and he was gazing pensively after her. He had a lighted cigar, and in replacing it in his mouth his abstraction was so great that he turned the live end of the cigar the wrong way. I don't think that the remark he made was intended for the lady, but I couldn't help but remember that Eve is said to be responsible for most of the misfortune which his expletive suggested.

A well-known stationer and member of the Board of Trade is said to be learning to play on the cornet. He is, it is alleged, becoming quite proficient. The trade will, of course, be in a fever of excitement for his debut. Will this be a case of fever and —?

ANSWERS TO CORRESPONDENTS.

Lithographers ask if "a regular transfer which was pulled from a copper plate about four years ago, can be transferred to stone, and if so; How?"

Ans.—Delay in answering your inquiry resulted from misplacing it. The impression cannot be transferred, we believe, direct, but it can be by photolithography.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, October 3, 1883.

THE MONEY MARKET.—The loan market is working more closely and shows a hardening tendency, although the present large Treasury disbursements for interest, &c., have a counteracting effect. Call loans on stock collateral ruled $\frac{3}{4}$ @ 3 per cent and $1\frac{1}{2}$ @ 2 per cent on United States bonds. The transactions in stocks continue light and prices fluctuate within narrow limits. The railroad traffic of the country is the largest of the year, but this fails to inspire the confidence of the outside investing public, which is essential for a reanimation of the market. Governments are firm, and railway mortgages in close sympathy with the share list. Sterling exchange is lower under an increased supply of both bankers' and commercial bills. The demand for bills to cover drafts made sixty days or more ago has abated.

THE PAPER MARKET.—Business, as is usually the case at the close of a month, was quiet among the city dealers during the first half of the week, but has since shown some improvement. Trade at the West is reported to be brisker than it is at the East, the aggregate movement at the principal distributive points in that section being estimated at 10 to 15 per cent. greater than to even date last year. Most of the manufacturers are steadily engaged on orders, while many of them have more in hand than they can conveniently execute, and we hear of instances where they ask an advance of $\frac{1}{4}$ c. and $\frac{1}{2}$ c. on recent orders for book and news. There has been a pretty general and copious rainfall over the Eastern and Middle States during the past week, which was greatly needed by the paper manufacturers, many of whom have been in enforced idleness for a number of weeks. They will now be enabled to start up again, with very little probability of any further drawback of this kind for the remainder of the season.

THE STATIONERY MARKET.—There has been quite an encouraging improvement in trade during the past week. And, moreover, trade has been more uniform than for some time past. While this has been encouraging to dealers, it is nothing more than has been looked for for some time. It is simply the regular fall business three or four weeks later than usual. Dealers are now beginning to receive the benefit of the small trade, which, it is expected, will make business active until the first of November. Consequently, orders are not so large as in the middle of the summer, but they are more numerous. Very little business is being done with the large retail dealers, for the reason that they bought the most of their stock earlier in the season. There is some lack of confidence prevailing among the small trade yet, but this has little effect in retarding purchases, but it rather acts as a check to reckless and extravagant dealing. Prices generally are fair, and remain quite firm, there being little or no fluctuation. The trade in toys, toy-books, &c., is now at its best. The envelope trade is a little better than last week. Dealers are buying more goods in anticipation of another advance in prices. Fine stationery is also coming in for a good share of business, and quite a marked increase of trade was noticed in this line during the past few days. Since the opening of the schools the trade in steel pens, inks and school stationery has been very good, and it remains steady. There is not much being done in plush, leather and fancy goods generally. Dealers are buying very sparingly in this line, and the bulk of business in it has evidently been done.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 2, 1883.

The dreadful dry weather has been a back-set to trade here in all of the Cincinnati region. It threatened to be serious until to-day, when a heavy rain that soaked the ground came and restored cheerfulness. Jack Frost has thus far been very considerate to this section, although he came to its very verge and nipped the grain and vegetables mercilessly. All branches of manufactures here are busy with full forces employed, except the shoe factories, the season for which is closing, and letting off some of the auxiliary workmen. Dry-goods jobbers have had a splendid fall. In other lines there has been some disappointment at the trade coming short of expectations, which can be accounted for by the dry weather. Then there are other more formidable causes affecting trade. The prices of pork and beef, as you well know, have been high, clear out of proportion to the prices of other grains for now over two years, and for two months or more they have been steadily shrinking. This affects a great many men directly in pocket, and it affects others indirectly as creditors, and as observers who are induced by such phenomena to exercise caution in business.

But the crops are all good in this region, and the dry season has not been so dry as to burn out the pastures in the great valley of the Ohio, as it did two years ago. The great acreage of tobacco, the greatest ever raised in this region, is all safe and the corn is cut. This rain that fell to-day removes all anxiety among farmers about the wheat they have sown, and on the agricultural score generally, confidence has been pretty well restored.

In the stationery trade here everything is quiet—very quiet; not dull, but rather offish. There are exceptions to this statement of the general fact. But good feeling prevails all around, and plenty of courage tempered with caution. Better news can doubtless be heralded in my next letter.

PRINCE WILLIAM.

REVOLUTIONIZING PRINTING.

Speaking in a general way, the art of printing may be said to have had three stages. The first was the block-printing, where the letters and words of a page were cut upon a block. The second stage was printing from movable types, in which process each letter is upon a separate body, so that the letters may be arranged in different compositions. The third stage is in effect a return to block-printing. This is printing from stereotype or electrotype plates, which really differ from the ancient blocks or engraved pages only in the manner of production.

The invention of movable types has been regarded as one of the greatest the world has seen. Motley, in his "Rise of the Dutch Republic," referring to one of the claimants for the honor of inventing movable types, says: "Another great weapon was secretly forging, more potent than any which the wit or hand of man had ever devised or wielded. At that very moment an obscure citizen of Harlem, one Lorenz Coster, succeeded in printing a little grammar by means of movable types. The invention of printing was accomplished." But the invention of movable types was not the invention of printing, since block-printing preceded it. Rather, the movable types gave to the art a facility it could never attain with engraved blocks.

Curiously enough, however, not many years passed after Faust had exploited the then new art of printing from movable types, before there was an attempt to return to the older method, printing from blocks or plates. One of the early printers conceived the idea of procuring a font of steel types, composing of them a page at a time, and, by impressing soft copper upon the face of such a page, obtaining a matrix in which to cast a stereotype plate in soft metal. Obviously, the leading motive in this attempt was to economize in types, since the steel types would be handled no more readily than others, and the needs of the business did not then, as they do now, demand a multiplication of forms for rapid printing. This was undoubtedly the first proposition of a stereotype plate substantially the same as those now in use. The idea has never been abandoned, but, modified in one way or another, has reappeared in the efforts of inventors from time to time, and is at this day the object of eager pursuit. That this is so, is accounted for by the fact that to perceive the difficulties which lie in the way of such a system requires the possession of very widely different qualifications. A printer knows the endless vexations of a "short font," and a mechanic can tell of the practically impossible task of providing a machine to move and operate in any desired order a great multitude of minute types. While the printer's requirements are still unfilled, the mechanic is over-burdened and in despair.

To get a clear understanding of the matter, let us look at the problem a moment. Say that it is desired to print a page of a book, or a column like this one. The requirement is, raised letter faces upon a proper material. These raised faces can be had by cutting them in order on the material, as the old blocks are made. Or they can be had by casting upon separate bodies as many types as will compose the page, and then putting them together in proper order, when printing may be done direct from the types, or a mold may be taken from them in which to cast one or more plates, these latter being in effect equivalent to the engraved block. This may be called a 'perfect process'; but its facility is no longer up to the needs which have grown out of

the modern universality of printing. Setting up types to get a matrix, and then casting a plate, is very much better than engraving the matter upon a block; but in comparison with present needs, or with the marvelous improvement in press machinery, type setting is a snail-like and costly operation. The problem, then, is this: How to get raised letter faces upon proper material, without first setting up types. Engraving them is out of the question; casting them is all right when once you have the matrix. This you wish to procure without making and using as many separate types as there are letters on the page. In other words, if there are in your page a thousand of the letter "a," you want to get a matrix without using one thousand "a" types. Plainly the way to do this is to provide but one "a" and then use it again and again as required. And so of all other letters, reducing the stock of type from thousands to a single one of each kind. There will thus be no accumulation, and all the time taken by the printer for distribution will be saved. Also, however great the run upon any letter, it can never be exhausted. Being so few in number, the types may be made of hardened steel for permanency—quite impossible when hundreds of pounds of letters are required.

This plain solution of the problem was found by a London printer some time about the close of the last century. How far he carried his experiment we do not know. Hansard's "Typographia" contains a mention of it, treating the proposition with open derision. Thirty or forty years ago, the effort was taken up by a New York inventor, who obtained a patent for a very crude mechanism, the value of which may be judged from the fact that it does not even suggest the methods by which the problem has finally been solved. After this attempt, however, inventors in this specialty multiplied, until the patent office records contained a hundred or more claims of great variety. One Essick proposed to "strike up" the letter faces from female dies. There is little need of following up such a proposition. M. Gally had a series of flexible strips, each carrying upon its surface an entire alphabet of dies; the strips to be moved forward or backward to bring any letter into the required line, when all were to be impressed at once—that is, a line at a time. Another plan was for a series of flexible disks, nearly the equivalent of Gally's strips. Other inventors placed the dies in a wheel which was to be revolved to bring them successively into operation. The variations of this scheme are very numerous, but it is unprofitable to detail them, knowing that scarcely one in a score even touches the essential difficulties. Indeed, it is not too much to say that nine out of ten of these schemes bear upon their faces evidence that they have never passed beyond the realm of the inventor's imagination. What else can be said of a proposal to make successive impressions in "a plastic material"—the veriest impossibility which can be conceived, and a hallucination which the first actual experiment will destroy at once and forever?

A machine constructed by John E. Sweet about twenty years ago, probably approached nearer to a successful issue than any which preceded it. Its delivery of the dies was not regular, yet there was enough of promise in the performance to encourage continuance, had that difficulty been the only one. But the ingenious inventor could not secure an even printing surface, and his machine was abandoned after having been exhibited at a Paris exposition with some success. Curiously enough, this really meritorious effort found no place in the American patent office, which is supplied with scores of less worthy ones.

All orders completed and forwarded according to instructions with careful packing by experienced and trained hands.

ADVANCES IN APPLIED SCIENCE.

The rapid advance of late years in the application of electricity to the practical affairs of life leads to the notion that we are at the threshold of the age of electricity, and that steam as a factor of progress will lose its leading position. We have had the telegraph, it is true, for many years; but it is only lately that hemispheres and islands are bound together by it, while the several appliances for displaying the many wonderful phenomena of electricity have been little more than the beautiful toys of scientists. It is the wire that still accomplishes the distribution of the new uses of electricity. The transmission of sound, also, has been developed to a very useful stage, and has wrought a marvelous change in the facility of transacting business. The perfecting of the electric light is now the leading phase of electric development, and the one that excites the most interest. Much benefit has accrued to inventors from the various international exhibitions that have been held in several countries during the past few years. The one now in progress at Vienna is attracting much attention, both on the part of scientists and of the general public. To appreciate the uses and merits of the various electric lights, it is necessary to bear in mind certain wide distinctions between them. It may be stated in a general way that there are two different electric phenomena, upon each of which a system of lighting has been arranged. In one case the light is obtained by the jumping, so to speak of the electric spark from the point of one object to the point of another in close proximity. The resistance afforded by the intervening air results in illumination. It is the ordinary electric flash made constant at a point by a continuous current. For this purpose two carbon points are used and two currents. This constitutes the arc lamp and is the most brilliant and powerful, and is especially adapted to out-door illumination. The other principle is that of charging a non-conductor, such as a piece of pure carbon, confined in an air-tight vessel, with electricity. The electricity passes through the carbon slip so slowly as to produce illumination. This light is softer than that of the arc lamp, and only one current is used. This is called the incandescent light, because the carbon film is prevented from being consumed by the exclusion of air from the lamp. This system also admits of the subdivision of the light, as with gas. The Brush lamp in our streets is an illustration of the former and the Edison lamp of the latter. The rotunda building is lighted with two tiers of arc lamps, comprising one hundred and twenty two in all, and presenting a very brilliant spectacle. The principal contributors to this class are the International Electric Company, formerly called the Anglo-Austrian; the Piette and Krizik, a Hungarian company that works the Pilsen lamp; the Schward, the Schuckert, the Brush, &c. The Pilsen lamp is described as the simplest of all the arc lamps and giving a pure light. The Schuckert lamp is much the same as the Pilsen, but they burn more beautifully on account of the excellence of the Schuckert machines. The Schward lamps are, however, quite as good, while the light is more steady; the regulating apparatus for keeping the points at the same distance being almost perfect, though complicated. When the distance between the points is widened by the burning away of the carbon points, the resistance to the passage of electricity is increased and the light decreases until the regulator reduces the space. The more sensitive, therefore, the regulator is, the quicker the difficulty is adjusted. This is so perfect in

the Schward lamp that no flickering is perceptible.

Some of the later devices also are designed to obviate danger to the lamp from an overcharge of electricity. In the Schward lamp the current cannot pass through the points until the glass globe is put on, and the current is also shut off when the cleaning door of the globe is opened and is turned on when it is again closed. The Brush light is spoken of as comparatively yellow in tinge. The display of incandescent lamps is an exceedingly good one, and, if we accept the statements of the correspondent of the *Manchester Guardian*, it constitutes the leading feature of the exhibition. The Paris Edison Company exhibits a lamp of 100 candle-power as against the ordinary lamp of that company of 16 candle-power; the difference being simply in the size of the carbon strips, the manufacture of which is the most important part of the present aims in this direction. The Swan lamps are shown in various sizes up to 200 candle-power. The principal difference between that and the Edison lamp is in the size of the carbon slips and their mode of manufacture. The Gerard lamp, managed by a French company, is pear-shaped and has four straw filaments united into two pairs and receiving two currents, the combined power of which ranges from 200 to 300 candles, requiring a high electro-motor force. The Muller is a new lamp similar to the Swan, but the filament is twisted spirally and has 50 to 60 candle-power. The lamp, however, that creates the most sensation is the invention of an American named Bernstein. He makes the carbon strips into a tube with thin projecting sides, thus securing a large surface. The advantage in this case is due to the fact that the light is not painful to the eye, being less concentrated. It is also very brilliant and is carried to a high power. At present there are two sizes—one from 150 to 200

candle-power, the other from 200 to 300 candle-power; the first requiring only 20 volts and the second 50. Another feature of this lamp is, that instead of a vacuum, it is filled with some vapor that prolongs the endurance of the carbon. In all the large lamps it is found that some heat is radiated, contrary to the general impression about electric lights. The other features of the exhibition are in a less developed stage, especially the newer applications. The battery principle is one of much interest, particularly in its application to locomotion, of which there are a number of interesting experiments. A great deal of attention is being given to this phase of development by scientists, as a great many of the most important applications are expected to result.—*Bulletin*.

A NEW COPYING PROCESS.—A Hungarian chemist has patented a process by which a paper, impervious to water, is painted with the following solution: Gelatine, 1 part; glycerine, 5 parts; Chinese gelatine, 0.2 part; water, 1 part. The manuscript is written with the following solution; Water, 100 parts; chrome alum, 10 parts; sulphuric acid, 5 parts; gum-arabic, 10 parts. The manuscript is laid on the first paper, and the surface or the latter is thereby rendered incapable of taking up an aniline color solution with which the surface is then flowed. Excess of color is absorbed with silk paper, and negative impressions are then taken on clean paper.

Striking Head Lines

Are used to call attention to the fact that this is an advertisement of the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

Its EIGHT Trunk Lines Traverse the best portions of NORTHERN ILLINOIS, WISCONSIN, MINNESOTA, DAKOTA and IOWA.

Located directly on its lines are the cities of CHICAGO, MILWAUKEE, LACROSSE, WINONA, ST. PAUL, MINNEAPOLIS, MADISON, PRAIRIE DU CHIEN, MASON CITY, SIOUX CITY, YANETON, ALBERT LEA, ABERDEEN, DUBUQUE, ROCK ISLAND, CEDAR RAPIDS, and COUNCIL BLUFFS, as well as innumerable other principal business centres and favorite resorts; and passengers going West, North, South or East are able to use the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY to the best advantage.

Ticket offices everywhere are supplied with Maps and Time Tables which detail the merits of the line, and agents stand ready to furnish information, and sell tickets at cheapest rates over the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

THE HISTORY OF PRINTING IN SCOTLAND.

(Continued.)

Not many years hence, England was plunged into grief at the death of their good "Queen Bess," and James the Sixth of Scotland became also James First of England in 1603. He, of course, repaired to London, but, as if afraid of the consequences that might follow the operations of unlicensed printers, he empowered the Town Council of Edinburgh to impose a fine, and withdraw their rights to the freedom of the city.

This same body granted to Thomas Finlaysone in 1606 the exclusive right of printing the First and Second Rudiments, and the Colloquies of Corderius. It does not appear very evident that the uniting of the two nations under one crown had any very good effects upon the progress of printing. We say so reluctantly, but we feel that the king was at heart an opposer to the freedom of the press. He caused everyone possessing a copy of two of George Buchanan's works to bring them to the "Mercat Cross," that they might be purged of matter offensive to His Majesty. But it is probably to this union that we may trace an early appreciation of Shakespeare in Scotland; at all events, in 1607, J. Wreittoun printed his "Venus and Adonis" in Edinburgh.

Next year, a celebrity called Andrew Hart is found, in conjunction with Richard Lawson, as printer of a volume of anecdotes, entitled a "World of Wonders." Before the close of the sixteenth century Hart had been imprisoned for taking part in a disturbance against the king, who dared to avow himself an Episcopalian. For a time he was well known as a seller and importer of books; some he even got printed for himself in Holland, but eventually he started as printer in Edinburgh. In 1610 his celebrated Bible appeared; it was enriched with engravings throughout, and copious references to Scripture places and people. He also printed an edition of the "Bruce," by Barbour; and in 1614 Napier, of Merchiston, gave him the printing of his treatise on Logarithms.

This notable printer died in 1621; and as if anxious to follow in his footsteps, we find that in the same year, on the representations of Bishop Forbes and Provost Menzies, of Aberdeen, they were granted a patent from the King to print. This secured, they appointed a Mr. Raban as exclusive printer, both to the town and University of Aberdeen. He had great encouragement given him to prosecute the art, being allowed a salary of £40, as well as an auxiliary fee of eightpence for every scholar attending the grammar school. Thus far, all was well; yet, although printing had penetrated as far as the northern metropolis, none of the other towns, except those already mentioned, seem to have adopted it up till the death of James VI. in 1625.

If, as there can be no doubt, printing made little progress under his father, it made still less during the reign of Charles the First. Yet, at the beginning of his reign, bibles were in such request that people sent to Scotland for them, as they could be printed and sent to London for less than they could be bought in England. But shortly afterward the king was at the head of an army, with a view to the extinction of Parliament, and the establishing himself as absolute monarch. This disastrous civil war occupied the two nations, more or less, during his reign; and the Scotch ratified their former religious views as a nation by subscribing in large numbers to the National Covenant in 1638. That, again, gave occasion for the in-

troduction of the art into Glasgow, for we find that in that year George Anderson printed "The Protestation of the General Assemblies," &c. Ten years later the Committee of Estates enacted that no printing be executed without their sanction; and, whether from a fear of punishment, or that there was nothing actually to print, no other works appear before the execution of Charles in 1649.

The Scotch protested against the death of their king, and instead of acknowledging the Commonwealth under Cromwell, they at once offered the kingship to his son James. Meantime, the political squabbles caused a number of printed sheets to appear in England; and foreseeing a like calamity as inevitable in Scotland, it was proclaimed in 1650 as unlawful to print any papers or gazettes without the sanction and revision of the Bishop of Edinburgh.

Charles the Second having been recognized by, and crowned King of Scotland at Scone, James Brown, an Aberdeen printer, published "The Form and Order of the Coronation," &c. Cromwell landed at Leith in the following year, and in his train brought Higgins, a printer, destined to be the introducer of newspapers into Scotland. By order of the Protector, and for the alleged amusement of his troops, Higgins reprinted a London journal called "Mercurius Politicus."

So in this humble venture did he inaugurate the now very powerful and influential newspaper press of Scotland. From a pamphlet in the Bodleian Library it appears that Evan Tyler also practised the art in Leith in 1652. There is a difference of opinion regarding the precise date of the first issue of the "Mercurius Politicus," ranging from 1651 to 1653; but that is of really little importance, so long as the fact remains undoubted that it appeared about this period.

The printing of this paper was removed to Edinburgh in 1654, where it was continued till the Restoration of 1660. The ungrateful monarch had no sooner gained the throne of his father, than he passed an act limiting the number of printers to twenty, the reason for which it is rather difficult to find. The London Stationers' Company were empowered to seize and to send to the Secretary of State "Buchanan's Scotland," it being thought injurious to the monarchy.

In this year the Scotch got a newspaper of their own, from a Scottish press. It was the property of a company of stationers, and conducted by a son of the Bishop of Orkney; but, alas! its issues were restricted to ten. About this time, or perhaps a little subsequent to it, Archibald Hyslop and William Carron made an attempt at producing fine printing. For this purpose they imported both men and material from Holland, at a great outlay of money; but whether from lack of funds, or the want of encouragement to proceed, the whole affair was dispersed in a short time. The new King might have done many things for the advancement of his subjects, but through the company of loose courtiers, his morals were debased, and many of his worst passions developed. Too much attention was paid to idle gossipers, and too little to the affairs of the nation. An office had become vacant under Cromwell, the want of which was beneficial to the common weal of the people. This was the post of licenser to the press. It was re-established now, and this time vested in some judges, officers of State and the Archbishop of Canterbury. This was, in fact, the work of those closely connected with the sovereign, who were dependent upon him for his smiles, and who, of course, framed a thing as would be sure to meet with his approval. Not

content with having the licensing of all those who meant to print at their command, an act was passed in 1663, which bound every printer to send a copy of each work he printed to the Stationers' Company, the King's Library and to the two Vice-Chancellors of the Universities of Oxford and Cambridge. Even here they did not stop, for in October, 1665, an act was drawn up, to which the King graciously gave his assent, and little wonder at it, for it was to give him an increase of that power he loved so much, viz., to grant him the prerogative in all matters relating to the press. While this monstrous monopoly was being assented to by those who certainly ought to have spoken out, the Aberdonians granted another to John Forbes & Son; this was the exclusive right of printing. With a spirit of liberality, already referred to in connection with their first printer, they gave him an office, a house rent free, and prohibited the importation of books. This was in 1662; and in 1666, four years after, they were fortunate enough to secure the first music types in Scotland, by which was produced a book of cantos and songs set to music, by Thomas Davidson.

Coming south to Edinburgh we find the same policy prosecuted by Andrew Anderson. He not only attempted, but actually succeeded in getting the printers of the city to assist him in obtaining a patent in his name, by which they were jointly King's printers. When the printers did so, we fear they little knew Anderson's designs, for it secured him a monopoly of trade and the sole privilege of granting liberty to print in Scotland for an almost indefinite period. Just come from Glasgow, where he had learned his apprenticeship, he now busied himself with the printing of a copy of the Scriptures. His was so full of errors, especially the New Testament portion of it, that the Town Council disallowed its sale, and shortly thereafter restricted his patent to the printing of Bibles and acts of Parliament, both always more or less in demand, and to a period of forty one years. But the poor man was destined never to require a renewal of his patent, for in two years more, or 1673, he was succeeded by Robert Sanders. The latter styled himself printer to the University and City of Glasgow, and his workmanship is said to have been very neat.

PAPER ROOFING.

A Mansfield, Ohio, Company is said to be manufacturing a roofing material from wood-pulp board, consisting of two-thirds spruce and one-third poplar. It is then prepared, under patents owned exclusively by the company, in such a manner as to give the greatest durability, and adapt it generally for roofing purposes. It is claimed to be the best roofing in the world, all things considered. It is not affected by heat or cold, as metallic roofs are, nor can it corrode. It is much lighter than slate, and can be walked upon without injury. It is practically fireproof, though not absolutely non-combustible. It can be used on any kind of roof having not less than 1½ inch fall to the foot. It is especially adapted to locations where smoke and sulphurous gases abound, which generally destroy metallic roofs in a short time. It is flexible, and can be used for valleys, flashings, ornamental cut-work in gables, panels, bay-windows, verandas and irregular-shaped roofs. It can also be used with perfect success for sheathing warehouses and grain elevators.

SOAP-SHEETS,

In books of forty leaves, each of which can be used like a piece of soap, and is sufficient for a washing.

The Perfect Ink-Extractor.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

No. 42 BLEECKER STREET, NEW YORK.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

BOSTON BITS.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, October 9, 1883.

Just at present the "Hub" is much enlivened by the presence of many thousands of visitors, attracted here by the two great industrial exhibitions which are now open in this city. The North Carolina Press Association, numbering some thirty members, are among the Southern visitors at the American Exposition, and are the recipients of many courtesies from the Boston press. On Tuesday of last week the *Commercial Bulletin* honored the visitors with a sumptuous spread at the Parker House, and this evening the Boston Press Club will dine the quill drivers at Young's. The press of this city have certainly given their Southern brethren a hearty welcome, which the visitors think cannot be returned unless upon Southern soil, and so an excursion of Boston newspaper men to North Carolina after the close of the exposition is among the possibilities.

In the way of trade, all stationers report a big business. In fact, the boom of September a little surprised dealers. The opening of the schools throughout the country opened up a lively country trade, and dealers were compelled to work nights packing goods for shipment. Business is not spasmodic, but steady; and every indication points to its continuance. The envelope makers have advanced prices about 10 per cent., but the trade have not yet met the rise, as large stocks in this line are in the hands of a majority of dealers. The advance, however, will have to be met when the diminishing supply is replenished.

Geo. F. King & Merrill are much pleased with their growing city trade and speak favorably of the country business. King's side-slit pens, patented June 30 last, and only lately placed on the market, are meeting with a lively demand.

Winkley, Thorp & Dresser are met with smiling faces, and complain only of over-work. The Boston autograph and scrap books manufactured by this house are so largely demanded in the West that increased facilities for their manufacture were necessitated. This is a new line of goods for Boston to make, New York having hitherto supplied the country, and though only a venture with this firm, some two years ago, yet it feels confident of success.

Ward & Gay are enjoying their share of the boom, and are making strenuous efforts to get their sample-room of holiday novelties in readiness for buyers by the coming week. I was

shown a very neat and novel Thanksgiving card, which just came in from the artists' studio as I sat conversing on trade topics. It embodies the poetical and the real, and is very suggestive of the delicacies of the feasting season. Daintily fastened to the upper right hand corner of the card with fancy silk ribbon is a squash—a real tiny squash, pulled when very young; to the left is printed "Joyous Thanksgiving," while beneath are inscribed the following lines from Whittier:

Who murmurs at his lot to-day,
Who scorns his native fruit and bloom,
Or sighs for dainties far away,
Beside the bounteous board of home?

The card is about 6x8 inches, mounted with easel back, and makes a very unique mantel ornament. The only fear entertained about the success of this design is the supply of small squashes. This firm has a very attractive exhibit at the American Exposition, and for the next two weeks this sample card will find a place in the show-case there.

I also found at the Exposition a display of fine linen paper from Byron Weston, of Dalton, Mass. Many novelties for office and school use are shown, which, if properly presented to the trade, would have ready sale, owing to their practical value. Among these I would mention a slate cover, designed for use in schools, which, when applied to the frame of a slate, prevents noise or breakage in falling. The elastic blotter and the elastic eraser, two very useful articles for office use or the school room, are of such merit as to win popular favor, and, no doubt, the trade will be soon asked to handle them.

A. L. D.

LOUISVILLE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., October 6, 1883.

This belt of country was visited by fine show-ers this week and the drought is ended. The grass has revived and pastures are again furnishing grazing for live-stock; plowing for winter wheat seeding is now actively progressing, the ground having up to this time been too hard and dry to permit it. Fall business is brisk in every department, and the movement of goods continues well supported at the recent high average volume. The Southern Exposition is advancing on its second half of the one hundred days' term, and is drawing great crowds from far and near, and that it is well worthy a journey from any part of the world to see is the verdict of all visitors.

AMONG THE DISPLAYS AT THE SOUTHERN EXPOSITION.

Charles Scribner's Sons, publishers, New

York, make a most creditable and elegant display. Bookcases ranged against the walls of their space are filled with the choicest publications of the firm, and several large glass cases show a variety of samples of superior skill in the bookbinder's art. The "Encyclopædia Britannica" and Lange's Commentaries are shown in fine style. A special feature is the case containing the encyclopædia; it was made in London and finished in ebony and gold for the Paris Exposition. Astronomical views and other decorative features combine to make this one of the most attractive exhibits. George G. Leavenworth is in charge.

D. Appleton & Co., the New York publishers, present their business in a comprehensive display. Their walls are made up of Cornell's geographies, maps, and Henslam's botanical charts. A great tower built of Webster's spellers and a general exhibit of various works in the departments of education, fiction, science, and history are well arranged and deservedly receive a full share of attention from all visitors.

Wm. F. Murphy's Sons, manufacturers of blank-books, Philadelphia, have a first-class exhibit of their goods; the style and finish of their bindings elicit high praise, and must prove an effective advertisement for the firm.

Rand, McNally & Co., Chicago, Ill., have a display in charge of Geo. W. Ramage, showing an endless variety of maps, atlases, lithographing and railroad printing, and other specialties of the house eminently worthy of their great reputation in this line.

Colby & Co., publishers of Adams' historical chart, New York, have a competent authority to explain the special features of the chart, and secure a careful examination for this meritorious publication.

The display made by the Bureau of Printing and Engraving of the United States Government shows the paragon of art in that land. An extensive variety of samples, from a tiny vignette up to a fifty thousand dollar government bond, make a fascinating study, and this exhibit is deservedly accorded the front rank for the highest class of work as well as for the superior taste shown in its arrangement.

The *South*, a monthly published in New York, has a space in charge of O. M. Crosby, who is doing good work in the interest of his publication.

Among the Louisville exhibitors, I note the large and elegant quarters of the old reliable house of John P. Morton & Co. Its educational publications and blank-book manufactory are strongly represented; cards, stationery and stationers' fancy goods, and a big citadel fin-

ished with Esterbrook's pens, are a few of the features of this noteworthy exhibit.

A very neat and appropriate display is made by the Gilbert & Mallory Publishing Company, the leading items in which are legal books, cases and gold pens.

Curry & Dearing have filled a line of shelves and show-cases with as fine a variety of high-class goods of the retail stationers' stock as ever seen here. Plain and fancy cards and note-papers, engraved and hand-painted birthday and holiday cards and souvenirs are the specialties.

Geo. H. Dietz & Co. make an interesting exhibit of blank-books of their own manufacture and commercial stationery of every description, including hektograph supplies, H. Maddox, of the Hektograph Manufacturing Company, of New York, being in charge.

Knoefel, Berne & Co. show six large blank-books of their own product, of which no bindery need be ashamed.

Other exhibits in which THE STATIONER'S readers may feel interested will be reviewed in a future letter. BOURBON.

REVOLUTIONIZING PRINTING.

(Continued.)

What is known as the Clephane machine has been partially successful when used to make a printed line for transfer to a stone, from which printing is done in the lithographic manner. When a matrix for casting is attempted, the difficulties of an uneven surface present themselves as yet unconquered, and the justification of lines still affords the inventor a field for effort. Some months ago a machine constructed by C. E. Davids, of New York, was brought into notice. Its mechanism is described as very fine, but the writer has seen no specimens of its performance, and the fact that a prospectus setting forth the merits of the machine was not entrusted to it for printing, but executed from ordinary type, seems to indicate that it is not yet in readiness for work. The same remark may be made in reference to the machine of Mr. Nelson, of New York, who has been a long time engaged in his effort.

It will be understood that no attempt is here made to catalogue the endeavors of inventors in matrix machines. A great many patents, as has been said, have been issued to such inventors in this country; it is only the most recent, the most active, or the most promising, which have been mentioned as their names came to mind.

The machine which is expected to do the work and is the latest in this line, is the invention of Robert L. Kimberly. It is the last of five machines constructed for him by various parties within the last eight years. Each of these machines differed radically from the others in some point or points; and each can be recognized as a step in a continuous advance from the crude methods and devices of untried processes to the simple agencies of a well proved and wrought out system. It is not proposed here to describe the machine, but to state some facts in regard to its capacity and facility of operation.

The machine uses only one letter or die of a kind, and carries with equal facility a font of one hundred or of one thousand letters, and these of any ordinary size. Its dies are hardened steel, and are produced and reproduced with the utmost exactness by an entirely new process. The die is, properly, the base of the whole scheme; everything else is built up around and in conformity to that. To get these dies uniformly and cheaply required the establishing of a new trade, none of the old artisans being able to sup-

ply the article to meet all the necessities of the case. The dies are carried upon a sliding key-board, and are worked by the machine at a speed which no operator can outrun in the selection of the required dies. A printing surface is secured as even as is obtained in type, by a device so simple as to appear hardly worth notice, but yet so vitally important that the most ingenious and perfect mechanism, lacking that device, would be utterly useless for any practical purpose. Finally, the machine is simple and substantial in design and construction—in a word, it will "run outside of the shop where it was built."

Among the advantages secondary in importance, which are characteristic of this machine, are the following: 1. The same machine will carry fonts of dies ranging from nonpareil to pica, and these fonts may be changed in less time than is required for a printer to take a case of type from a rack or cabinet. 2. A font of any number of letters may be used in the machine; or a number of small fonts may be used without changing the key-board. Thus an assortment of small display letters, sufficient to give all reasonable variety to the advertising columns of a newspaper, or for the setting of "display heads" for news matter, may be carried in a machine without the necessity of even removing a key-board. Such a removal, for the purpose of changing the font of dies, does not involve the removal of any fastening, but is no more troublesome than the withdrawal of a printer's case from a cabinet or rack. 3. The work is constantly before the operator's eye, much more directly than the printer's types are in his view as he composes them; therefore the operator should see at once any error he makes, and is able at all times to avoid "doublets" and "outs." 4. The key-board is very light, and moves easily; the power necessary to depress a key and operate a machine can be applied by a single finger without fatiguing the operator in a day's work. 5. The feeding of the letters, and the spacing of the lines to make justification, is done by so simple and certain a device that no error can possibly occur as the fault of the machine. 6. Except the dies, there are no small parts or pieces to wear or get out of order.

Of course the final test is the economical one. On this point it is said to be demonstrable that the machine will do the work of at least four men.

Some of the advantages to be particularly appreciated by printers are these: There can be no pi. The machine may set upon a carpet without soiling it. There is no such thing as "running out of sorts." There is no waiting for the return of forms, or for the distribution of type. There is no such thing as "standing matter;" even the plates may be melted down, saving the matrices for recasting when they are needed for later editions. The inventor has a matrix which has been cast upon in this country, in England, and in several other foreign countries, and it is to-day as good as on the day it was made.

Some of the incidental advantages of the invention may now be mentioned. The most important of these will come from the total revolution in the method of procuring stereotype plates. For this, the inventor uses, preferably, wooden blocks of common white pine; or a still cheaper wood, the lynn or basswood, will answer equally well. Paper may be used in this process, however, with every advantage which it shows in the ordinary process. The wood gives a cleaner cut and sharper impression, and it possesses one very great advantage—the blocks are capable of use for casting a hundred plates,

without the slightest injury or change; and they may be kept for any length of time unchanged. Of course it will be cheaper to keep these wooden matrices than to keep plates; and from the matrices plates may at any time be cast. Some large printers have tens of thousands of dollars worth of plates stored in their vaults. The value of the wooden matrices from which such plates could at any moment be reproduced, would be insignificant in comparison.

Another advantage will come from the smaller amount of room needed for doing a given quantity of work. A machine to do the work of three or four men will occupy a tenth of the floor space necessary for frames for type-setting. A very remarkable change will also be effected in the appearance of the composing room. It need not vary greatly from a telegraph operating room; it need not be less tidy in appearance, nor show any of the dirt which is characteristic of most rooms where type-setting is done. And the operators of the machines might wear white gloves without soiling them. While speaking of the operators it will be well to note one very important result of the abolition of type-setting by these machines. Any one who has practised that art knows how intense is the strain it imposes upon the nerves. To this is due the compositor's nervousness, from which come his thousands of false motions during a day's work, wasting his strength while diminishing his earnings. Now operating one of these machines is a totally different kind of work, and taxes the nerves no more than any other light work does. The resulting benefit will be seen in two directions: the operators as a class will be better people than compositors are, and they will have less burdens to bear.

An operator need not be a printer. Beyond selecting the letters to be impressed in their order, he does not and cannot in any way influence the action of the machine. Its performance is the same whether its keys are struck by an accomplished typographer or by a boy who never saw the interior of a printing office. To fully explain this, it would be necessary to enter into the matter of justification of lines, which, it may have been observed, has not been alluded to in any way. It is not the intention to go into that subject here; the reader must accept the fact that these lines are justified, and the assurance that any doubter can be accommodated in five minutes with a demonstration upon his own manuscript written on the spot. The justification proceeds ten times as fast as a man can set type, and is absolutely exact and certain. In this operation, all the trade craft of the compositor is concentrated, and nothing is left for the operator at the machine but to follow copy. It requires a skilled man to justify, but one such will supply half a dozen machines with copy.

Still another feature of the new system is found in the fact that it completely reverses the old rule as to tabular work, which in type costs from half as much to twice as much as straight matter, according to the number of columns, or "justifications," which it contains. On the machine this matter can be set more rapidly, and therefore cheaper, than straight matter. Finally, there is no kind of work that is executed with body letter, which cannot be done with increased facility by the machine. The new system must be accepted as a total revolution in everything in the printer's trade which pertains to body letter. And to put it in a striking way, perhaps, it may be said that one may carry in his vest pocket an outfit of letters sufficient to print the most ponderous volume ever issued from the press, and do the work a dozen times over.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

* * *

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

FAMILY PULPIT BIBLES

PUBLISHED BY THE
NATIONAL PUBLISHING CO.

724, 726 & 728 Cherry Street, Philadelphia.

We claim the following advantages for the "National Contrasted Editions":

First.—The ONLY Quarto Bible containing the Contrasted Testaments, in which the Old King James and the Revised Versions are placed in parallel columns.

Second.—Larger, better spaced, and more readable type in all cheap and medium grades.

Third.—Latest and most attractive variety of side stamps.

Fourth.—More Illuminated Plates and Illustrated and Descriptive features.

BINDINGS GUARANTEED EQUAL TO THE BEST. PRINTING SUPERIOR TO ANY. PRICES AS LOW OR LESS THAN OTHERS.

Luther's Illustrated German Bible,

Containing BIBLE DICTIONARY, History of the Books, Maps, Illuminated Plates and other beautiful features, making the most complete and best illustrated German Bible in the country at lower prices than any other edition.

Haydock's Approved Catholic Bible,

Containing a complete Catholic Dictionary, and embellished with hundreds of magnificent engravings and illuminated plates.

Illustrated Catalogue, containing full description, prices, &c., mailed on application.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

SPRINGFIELD, MASS.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW TOYS.

Some interesting novelties in toys are represented in the accompanying cuts. Goblin Ten Pins, of which there are two cuts, are a fine improvement over the ordinary game of ten pins, each pin being represented by a grotesque figure. The heads of the figures are adjustable, which gives increased amusement to the game, as the bodies of the pins may be fastened to the base of the toy and their heads shot off by the cannon. The heads are interchangeable, which is another interesting characteristic of the game, as each pin can thereby be changed to many different forms and shapes. The goblins are eight inches high and so made that they can be packed in a neat wooden box.

In another cut there is a representation of a new toy iron sleigh with walking horse and dressed driver. The horse, pulled along by a string, imitates the walk of a real horse. The toy is finely gotten up, is perfect in action and very durable.

NEW PATENTS.

No. 282,393. Office Check Book.—Charles E. Sprague, New York, N. Y.

A book composed of leaves of detachable blank forms alternating with permanent record-leaves, each record-leaf having one of its sides prepared for receiving the records of the checks or other documents, and having the other side prepared as a surface to which to fasten the checks or other documents when they have been returned.

No. 282,451. Process of and Apparatus for Molding Hollow Articles from Celluloid and Other Compounds of Pyroxyline.—John A. Furman, Newark, N. J.

The invention relates to an improved process and apparatus for molding hollow articles from celluloid and other compounds of pyroxyline. Its particular object, when applied to such articles as penholders, is to produce a hollow holder having a socket at one end to receive the pen at one operation and from a single piece of material.

No. 282,468. Metal Toy Plane.—Solon R. Rust, Pine

Meadows, assignor to the Meriden Patent Novelty Company, Meriden, Conn.

No. 282,948. Device for Holding and Guiding the Fingers in Writing.—Ignaz Bergman, Fort Madison, Ia.

No. 282,956. Mounting Form Rollers for Printing Presses.—Andrew Campbell, Brooklyn, assignor to John McLoughlin and Edmund McLoughlin, New York, N. Y.

No. 282,965. Toy House.—James L. Dorin, Brooklyn, N. Y.

No. 282,978. Child's Money Bank or Box.—David R. Goudie, London, Ont., Canada.

No. 282,988. Type Distributing Apparatus.—Louis K. Johnson and A. Augustus Low, Brooklyn, N. Y.

No. 282,990. Game.—Percy H. Johnson, Marlborough, Mass.

No. 282,995. Plate Printing Machine.—Homer Lee, New York, N. Y.

When People are Traveling Com-
fort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE PARSONS PAPER COMPANY,

☞ HOLYOKE, MASS., ☞

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

IN answer to frequent inquiry made about our Novelties, we will furnish a

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Henry J. Stone, publisher *News*, Sanford, Me., has sold out.

William Biggs, bookseller and stationer, Oxford, N. C., is dead.

Merrill & Morse, printers, Auburn, Me., have sold out to W. S. Morse.

Robert Leaman, of Van Antwerp, Bragg & Co., Cincinnati, is in the city.

L. & W. H. Waddell, publishers of the *Chronicle*, Charlottesville, Va., have sold out.

Dietrich & Weihe, booksellers and stationers, Milwaukee, Wis., have dissolved partnership.

Lewis Wright & Son, booksellers and stationers, Holyoke, Mass., have sold out to J. D. Gill.

The firm of Rogers & Co., printers, Memphis, Tenn., has been succeeded by W. Spot Smith & Co.

George Schlegel, of the firm of George Schlegel & Son, lithographers, New York city, is dead.

George W. Arms, Philadelphia, is recovering fast, and can even attend to business, which is very brilliant.

Charles A. Daniels has been admitted to partnership by H. C. Gray, publisher of the *Malden Mirror*, Malden, Mass.

Inness & Drummond, composing the Ross Printing Ink Company, Toronto, Ont., are advertised to be sold out at auction.

The sheriff has taken possession of the plant of George B. Fraser, publisher, Morris, Man., and the same will be sold at auction.

The style of the firm of Bentley & Gerwig, manufacturers of twines, &c., New Brighton, Pa., is now Bentley & Gerwig (Limited).

C. B. Cottrell & Co., manufacturers of printing presses, Westerly, R. I., have dissolved partnership. C. B. Cottrell & Sons succeed the old firm.

The Pennsylvania Engraving Company, Philadelphia, Pa., composed of Washington & Caspian, has been dissolved. Paschal G. Caspian continues the business.

A dissolution has taken place in the firm of D. O. Wallace & Co., booksellers and stationers, Littleton, N. H. D. O. Wallace continues the business under the same style.

Buck & Lindner, lithographers, New York city, have entered into a limited partnership, with special capital of \$10,000. The partnership is limited to September 19, 1885.

D. J. Kane & Brother, bookbinders, New Bedford, Mass., have recently put upon the market a new machine of their own invention, for forming the backs of books. Last week they shipped 15 of the machines to New York purchasers. They are manufactured at the Fairhaven Iron Works.

Berlin & Jones have recently begun the manufacture of their usual line of valentine envelopes for next season's trade. The material is of the best quality of paper, and the embossing design is new and unique. The firm has two or three hundred employes, and is using every endeavor to make its line of manufactures excel in quality, variety and cheapness.

E. & H. T. Anthony & Co. have recently brought out another useful aid to photographers. It is called "Gelatine-Bromide Rapid Printing Paper," and has been patented by the firm both in this country and Europe. The article is nothing more or less than a prepared or "sensitized" paper for transferring or printing pictures from photographic negatives. The ordinary process of printing photographs on paper for mounting on cardboard is very long and troublesome, and requires the aid of sunlight to develop the picture. By the aid of the "Gelatine-Bromide Rapid Printing Paper" a photograph can be transferred from the negative rapidly and effectively by gas or lamp light.

The exceedingly favorable notice extended to the fall styles in papeteries, manufactured by the Powers Paper Company, has warranted placing in that department an additional line specially adapted to the finest holiday trade. This line is very novel and rich in design, and makes the full line the most complete ever shown. The company has also one of the finest and cheapest lines of walnut, rosewood and silver-gray writing-desks to be found. The trade are invited to call at the New York salesroom, 62 and 64 Duane street, and inspect the same. J. L. St. John, agent.

Marcus Ward & Co. have undoubtedly as fine a line of block calendars as any house in the trade. The firm has no less than four varieties called the "Shakespearean Calendar," the "Day unto Day Calendar," the "Every Day Calendar" and the Season's Calendar. The first named contains familiar quotations from Shakespeare; the second choice quotations from Scripture; the third appropriate selections from popular authors. The Season's Calendar is a pocket calendar in book form and gives postal information, a list of holidays, the names of the different Presidents of the United States.

The first number of the *Rubber Trade Reporter*, a journal devoted to the interests of the rubber manufacturing and jobbing trade, has just been issued. It is a sixteen-page publication and is got up with an excellent understanding of the requirements of a trade journal. Its editorial page is full of able discussions of timely topics, which, together with its news items and well selected general matter, must make it a welcome visitor to all connected with the rubber trade. The *Reporter* is published in Boston by C. M. Canty.

The Fountain Ink Company reports an unusually busy season. The demand for Caw's ink has far exceeded expectations, but the company is straining every nerve to fill all of its orders before the cold weather sets in. Dealers who have not ordered their winter stock should do so without delay.

The condition of Henry Bainbridge, who has been confined to his home in Brooklyn by illness for the past two or three weeks, has grown worse during the last few days. It is hoped, however, that Mr. Bainbridge will be around again in a short time.

Christy, Shephard & Walcott, manufacturers of paper hangings, New York city, advertise a limited partnership, formed August 1, with a special capital of \$135,000, the partnership to be limited to June 30, 1884.

The firm of John B. Davids & Co. has lately secured quite a large export trade in its various lines of inks. This is quite flattering to so young a firm.

Execution has been issued against Mintzer Brothers, book-mounters and gilders, Philadelphia, Pa., on a judgment of \$7,000.

The Standard Rubber Company, Boston, Mass., has been damaged by fire.

Kerr & Chittenden, manufacturers of paper collars, Galt, Ont., have dissolved partnership.

John A. Shiver, publisher of the *Clipper*, Warrenton, Ga., has sold out to Davis & Patillo.

J. J. Harrington, publisher of the *Pacific Life*, San Francisco, Cal., has sold out to D. L. Levy.

Martha J. Lewis, dealer in toys, &c., Cambridgeport, Mass., has filed a married woman's certificate.

Bowman & Hirst, printers, Charlotte, N. C., have dissolved partnership. John Hirst continues the business.

A fire on Sunday morning in the village of Passumpsic, Vt., destroyed the Passumpsic Pulp Company's mill. Loss not stated.

Tuttle Brothers, card printers, North Haven, Conn., have admitted F. C. Bradley to partnership and will do business under the same style.

The firm of Garton, Blewett & Co., booksellers, stationers, &c., Detroit, Mich., has dissolved. Garton, Berry & Co. succeed to the business.

Holt & Frisby, dealers in wall-paper, &c., Louisville, Ky., have dissolved partnership. A new firm has been formed, under the style of Tracy, Holt & Co.

C. S. Nathans, 55 Cedar street, has brought out a novel and handsome calendar. The trade should send for a circular or for a sample. This calendar is "perpetual."

An advertisement of a stationery business for sale appears in another column. This is thought to be a first-rate chance for somebody who wants to get into a growing town of 40,000 people.

Charles A. Burkhardt has prepared a little work on "Engraving and Stationery Etiquette," which has been published by G. P. Putnam's Sons, of whose stationery department Mr. Burkhardt is manager. This is a very useful handbook for the stationer. It gives diagrams and styles of visiting cards, instructions as to the form of invitations for all kinds of fashionable events and other information not always attainable at a moment's requirement.

R. Worthington announces for publication, on the 15th of October, a new book for children, entitled *Worthington's Annual*. In the preparation of the volume, the design has been to give to children of all ages a greater amount and variety of entertaining reading, and at the same time a greater number of fine engravings, than have ever before been put together in similar form. The result is the production of a book of the approved quarto shape, which will be a formidable competitor among books of its class for the admiration of the little folks. It has more than four hundred engravings, besides a liberal number of colored plates, all by eminent artists, and all of that special character, in subject and treatment, which captivates the fancy of children. The most interesting phases of child-life, and of animal life, strange scenery, thrilling adventure, the curious things in nature, and the wonderful achievements of science and art, are all portrayed by masterly hands, and each picture instructs while it pleases. The same may be said of the text, which has been furnished by many American and English authors, all more or less noted as writers for children. The design of the chromo cover is especially neat and attractive, and the coloring and printing are without a blemish. Within and without the book will be wholly

pleasing to children, and will meet with the demands of the most critical parent.

Frederick MacCrellish & Co., publishers of the *Atlas*, San Francisco, Cal., have sold out.

Rose & Miley, publishers of the *Times*, Benton Harbor, Mich., have sold out to J. P. Thresher.

N. Ure & Co., booksellers and stationers, Toronto, Ont., have sold out to B. H. Rathwell.

Rucks & Alden, publishers of the *Delta Review*, Greenville, Miss., have discontinued business.

The A. H. Hart Company, manufacturer of twines, &c., New York city, has been damaged by fire.

J. H. Hutchinson, formerly publisher of the *Transcript*, Franklin Falls, N. H., died a few days ago.

Catharine Moore, of the firm of C. Moore & Co., manufacturers of twines, &c., Philadelphia, Pa., is dead.

The establishment of Robert Bishop, dealer in paper stock, Boston, Mass., has been damaged by fire. Insured.

Among the stationers who visited New York during the past few days was William H. Dempsey, of Washington, D. C.

Furber & Wallace, publishers of the *Republic*, Littleton, N. H., have dissolved partnership. George C. Furber continues the business.

Frank E. Beach has been admitted to partnership with J. M. Emerson, proprietor of the *Naugatuck Valley Sentinel*, Naugatuck, Conn.

Langfeld, Turner & Andrews report a large increase of orders on last year. They have just now as much to do as they can possibly attend to.

Mary Russell, stationer, San Marcos, Tex., has admitted Bettie Ellison to partnership, and the style of the firm has been changed to Russell & Ellison.

The firm of Meakins & Co., brush manufacturers, Montreal, Q., is now composed of C. W. Meakins, Sr., of Hamilton, and C. W. Meakins, Jr., of Montreal.

G. A. Whittaker, Washington, D. C., takes advantage of a handsome steel engraved "folder" to announce that he has removed his stock from 941 to 1105 Pennsylvania avenue, where his old friends and all who want to seek can find him.

The National Publishing Company, Philadelphia, offers to the trade its new line of photograph albums bound in plush and leather. It has issued a large and attractive assortment of designs which cannot fail to command a large sale. It has made a specialty of using only the best materials and of producing a durably bound and elegantly finished album. The ards are of heavy white paper, with a neat gold border and are free from the wrinkling, or "cockling," that causes so much dissatisfaction in other albums. The plush used is of extra fine quality, with a long silky nap. Dealers in holi-

day goods everywhere should send for price list before ordering.

Porter & Coates, Philadelphia, have just published "A Comprehensive Biographical Dictionary," by E. A. Thomas. This work is intended to present in convenient size and in comprehensive form at a moderate price, accounts of the lives of eminent personages, and it has been made very complete. The same firm has also just issued a new book by Horatio Alger, Jr., the first volume of the "Atlantic Series," entitled "The Young Circus Rider." Another new publication of the house is "Ned in the Block House; or, Life on the Frontier," by Edward S. Ellis, this being the first volume of the "Boy Pioneer Series."

A disastrous fire occurred at two o'clock on Tuesday morning in the four-story brown-stone front building at No. 34 Courtland street. The basement and first three floors of the building were occupied by E. Wells Sackett & Rankin, stationers, printers and lithographers, and the fourth floor by Robert Foster, a manufacturer of blank-books and ruled paper. The entire loss is estimated at about \$55,000, which is probably covered by the insurance. The building was completely gutted above the second story. The stock and machinery of Robert Foster in the fourth story was a total loss. They were valued at \$12,000, and were only partly covered by insurance. The firm of Sackett & Rankin is the heaviest loser, the damage to its stock by fire and water being estimated at between \$30,000 and \$40,000. Mr. Rankin said that there

was an insurance of about \$50,000 on their stock, which was divided among several companies, principally the London and Liverpool and Globe, Lancashire and other English companies. The building, which is the property of the Union Theological Seminary, is damaged about \$10,000. It is fully insured. The cause of the fire is not known.

INK FOR WRITING ON GLASS.

An ink for writing on glass can be made by dissolving in commercial strong hydrofluoric acid enough gum arabic to make the liquid flow readily from a pen without being viscid, and to color it with cudbear or some other coloring matter which will stand an acid, so that the writing may be visible to the eye. The solution must not be made in a glass vessel, but is best made in a rubber bottle such as hydrofluoric acid is sold in. When a portion is poured out, it should be poured into a platinum or lead vessel, or into a rubber nipple set up in a small wide-mouthed bottle. Care should be taken that the acid be not brought in contact with the skin, as it is liable to produce painful and troublesome sores. A steel pen may be employed with this, or you may use a platinized steel pen. Another way, perhaps, would be to make a thin paste of finely-powdered fluoride of calcium and strong sulphuric acid; in this case, of course, a plain iron or steel pen will not do.—*New Remedies.*

Life is not so short but there is always time enough for courtesy.

FOLEY'S PAT. IMPROVED STYLOGRAPHIC PEN.

Great reduction in price: No. 1, \$1.75; No. 2, \$2.50; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

A VETERAN INVENTOR.

E. W. Dennison, of the Dennison Manufacturing Company, gave on the evening of September 26, in the private dining-room of the Norfolk House, Boston Highlands, a dinner in honor of the return to America of his brother, A. L. Dennison, well known as the inventor of the American system of watch-making. There were present sixteen invited guests, nearly all of whom were veterans in the watch-making industry or in the manufacture of the implements and tools necessary for its prosecution. Among the guests were E. Howard, N. P. Stratton, Oliver B. Marsh, David Marsh, C. E. Moseley, James Baker, John Moore, B. A. Buckley, Ambrose Webster, E. H. Owen, D. A. Lyle and F. A. Dewson. After dinner, one of the gentlemen present spoke of the return of Mr. Dennison to this country after an absence of thirteen years, and called to mind the time prior to his departure, when, by his perseverance and energy and skill as a mechanic, he revolutionized the manufacture of watches, and laid, by his invention, the foundation of the present great industry, the manufacture by machinery of the works of watches in America. He gave a brief sketch of his life from the time that he left his home in Brunswick, Me., through his course as apprentice, master and inventor, until he finally achieved his triumph, when connected with Mr. Howard, in the completion and carrying out of his idea of the manufacture by machinery of the interchangeable parts of the mechanism of the watch. At that time watch-making was in its infancy, but the foundation was planted, by his act, of our present great factories, turning out, as they do, about 3,000 pocket time-pieces each day, and employing nearly 7,000 workmen. In the course of his remarks on Mr. Dennison, he spoke of the time when he went into the attics of New York city and worked with Swiss watchmakers, with the intention of becoming so expert in the repair of a watch that he could make it difficult to the most experienced to detect the fact that the works of the watch were not entirely new. A general discussion followed upon the date and origin of certain inventions, which, after the first step, had followed each other in rapid succession. Reminiscences of the time when nearly all present were apprentices and workmen were talked of until about 10 o'clock, when the guests departed. A. L. Dennison has for many years been manufacturing watch-cases in England, and exports many of them to this country yearly. He left America twenty years ago, and this is his first visit in thirteen years. He will be in Boston the guest of his brother, E. W. Dennison, for about a month.

THE STATIONER

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 11, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE depression governing the stock market is an incident which serves to demonstrate the precept which THE STATIONER has been trying to inculcate upon its readers. We observe that the "Trade Lounger," whose paragraphs appear in our columns from week to week, takes occasion at this date to refer to what THE STATIONER has said upon the necessity of avoiding speculations, and voices the expression of opinion by some of our readers, that what has been said by us has had its influence upon the trade. We are glad to know it. It cannot be said that THE STATIONER has been afraid to avow its belief in what is right, nor that it has hesitated to denounce what has been wrong or imprudent in trade management. If there are people who feel that we have gone too far, they have only to prove the strength of their argument and the righteousness of their judgment and we shall deal fairly by them. But we have not yet had cause to reverse our opinions or to believe that we have counseled the trade to do anything that was not for their best interests. The history of the stock market shows to what extent desperate speculation has gone and how completely really good interests may be sacrificed by knavery on one side and weakness on the other.

THE business situation is naturally affected by all of the depressing influences which affect markets governed by wildly speculative influences. One of its most recent, but not unexpected phases, is the position taken by the banks in discounting commercial paper. The bill-brokers have induced the mercantile community to "kite" their notes, and the facility which has attended their efforts at discounting has been most injurious. Merchants have had their promises to pay flying around the streets as thick as "leaves in Vallambrosa," and we fancy that many of them have not stopped to think of the damaging influence upon their credit of the rates at which these have been selling. We have had recent instances in the stationery trade where notes given without consideration and loosely put out have brought down houses which ought never to have been so entangled. The dangerous readiness of some of the banks to discount notes and to loan their resources have helped to build up a dangerous class of bill-brokers, and the evil has gone so far that even reasonable accommodation has been refused because of the channels through which it has been sought. It is time that we got rid of such sewers of trade. They end in a cesspool of stagnation and decay, exhaling miasma and fatal to commercial life. Our readers can appreciate the situation as well as we. Doubtless, we only need to call their attention to it to make them realize it. Good commercial paper is difficult to negotiate at high rates, and the banks are narrowing their lines of discounts and closely scrutinizing notes that are offered to them. The carelessness which has prevailed must give place to pru-

dence, and if business men must have money they should seek it in the legitimate way, and ask it of the banks with which they have dealings, presenting such reasonable claims for consideration in the nature of security founded upon merchandise assets or other substantial backing, as will justify them in the demand. As for the bill-brokers—let them go.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

There is opportunity for a chapter on cats! I will not inflict it on the readers of THE STATIONER, but only wish to say that the trade seems to have broken out on cats lately. I don't recall having seen any—certainly not many—specimens of the domesticated felis in stationery stores heretofore, but for a few days past I have been led to believe that the trade ran to cats. Probably the next time when I try to take a census there will not be a cat on view. Some of the cats "don't handsome much," but others are just splendid. I was struck with admiration of some very large ones. I wonder how people manage to get them so big. Has anybody got a handsome, well-formed tortoiseshell or striped black-and-gray cat to give away? If they have, please let me know. I want one of the thorough-breds, such as grow so big.

* * * *

THE STATIONER is held responsible for a good many things. Some people growl at it, and again others applaud its suggestions. I heard a remark the other day to the effect that THE STATIONER had been largely instrumental in keeping trade back. I was, of course, curious to know why, and was told that it was difficult to excite customers and induce them to buy just a little more or some new thing to add to stock and take the chances of selling. In fact, the gist of the complaint was that you had been instrumental in keeping buyers from purchasing in excess of wants. I made inquiry in other places and found that the same idea prevailed, although there was more disposition to applaud the conservative recommendations of THE STATIONER than to growl at them; and even those most disposed to complain were candid enough to admit that on "general principles" you were right, and that while they were willing to take the chances of big sales, extended payments, bills dated ahead, and all that sort of thing, they didn't think it wise for other people to incur any risks.

* * * *

Of course, it is easy to see the theory upon which the complainants work. They think that they are quick enough and keen enough to look after their own interests, knowing whom to sell to and able to take chances which they would not advise their neighbors to take. There is a rash self-confidence in this which goes far toward justifying the attitude of THE STATIONER, and on the whole, sustains its judgment. Where I find a man who don't like a thing on his own account, but thinks that it is good for his next-door neighbor and that next-door neighbor is *vice versa* in his opinion, I can fairly conclude that they are men of good judgment on at least one-half of their proposition, and are mutually correct in agreeing that THE STATIONER's advice is good for the other man, and per consequence, for all of the trade, buyers and sellers.

* * * *

A "dusty miller" has been "taken up" for trying to get a city electrotypewriter to make

plates for counterfeiting Treasury notes. It seems to me, judging from the accounts which appear in the daily papers, that this would-be "coney fakir" is about one of the greenest types of scoundrels that has ever reached New York. Pity that he didn't fall in with some of those "bunco" men who loaf along Chatham street and Tryon square.

Speaking of "bunco" men I observe that the police have just had their attention called to the fact that there are such rogues openly at work along our main eastern thoroughfare. They would do well to drive the rascals away. Some of the readers of THE STATIONER may have observed that at or near the City Hall station of the elevated road there are to be found individuals whose faces become familiar and who seem to have nothing to do and whose general appearance is not of the engaging character of a buyer just come to town and hurrying down from Forty-second street to "scoop in" all of the best of the season's novelties.

A jolly couple of the "boys" crossed over to Jersey City about sundown on Tuesday. Not to be precise, I shall mention them as Jacobus and Pickerel. When asked where they were going, they replied, "On the road." They were not got up for a "mash," but were *au fait* in solid style, which evidently meant business. Southward they went, and William and John streets will doubtless hear from them "early and often."

Perhaps I have said too much, and might be excused from saying more about that dazzling vision of loveliness which bosses the envelope machine on William street, but I can't help recurring to it again for the reason that a communication has been addressed to me anent the vision referred to and my comment thereon. I shall quote. My correspondent says:

"That club man is on hand, Mr. Lounger. If you say 'Pommery Sec,' he will appear."

Now, I don't mean to say "Pommery Sec." I don't want to go into the "Open Sesame" business. In fact, I don't want to open "nawthin'." What does the "Club man" take me for? I am not rolling in wealth—in fact, I am *not* an envelope manufacturer.

Again, my correspondent goes on to say: "No, no, sir; not so easily frightened! What do you take the young lady for?" (I took her for an angel!) "She was not born in the woods, to be frightened by an owl,"—that's *mean*—"to fear any connection of his."

Mr. Editor, I begin to believe that this thing is likely to become personal.

But let us have the rest of it! He says: "Owd man"—that's a horrid owd joke—"do not flatten your nose"—I'll ditto yours—"on the window pane"—and give you a pain—"or strain your optic nerve trying to outdo Peeping Tom of Coventry. The young lady whom you saw through the window is proof against 'Lounger.' She is engaged—in attending to her machine, and no matter how bad you may have the St. Vitus dance, she will not be distracted."

What do you think of this, Mr. Editor? I believe that this is getting to be decidedly per-

sonal. "Peeping Tom," indeed! Why —; but let us get on. He says:

"You say that said attendant is not on post! You mistake! She is not confined to 'one post' but extends her duties."—Vas dot so? "Do not say

Your intervention now is needless grown,
Retire and let me speak with her alone."

It will be observed, Mr. Editor, that this club man is emulous of Shakespeare. He drops into poetry as easily and naturally as any Wegg, and is quite as exhausting on the feelings. I am expected to stand his abuse, and am willing to bear up under a reasonable amount of it, but I cannot, no, I cannot take it all—I shall seek atonement. Perhaps it will be asked how I shall secure it. I shall "bust" the envelope trade individually and collectively. I don't want to injure unoffending parties, but it will be impossible to do the job well, except that I take 'em all in. I forgot to add the last few poetic thoughts with which this Sinful club man, Pommery Sec. man, audacious 'envelope and papeterie box man tailed off his letter. He says:

"I have kept back her foes
While they have told their money."

A few concluding words about firing "Lounger" into some place devoted to rubbish are too entirely personal for repetition. Referring back to the money suggestion I have no doubt about the toll business, none whatever—I don't dispute it, and wouldn't if I could. Now, somebody else get in and "brace me." I am in the humor.

ANSWERS TO CORRESPONDENTS.

A. A. A. asks: 1. About how much capital does it require to start a retail stationery store with a complete stock of goods? 2. About what per cent. is the average line of profit in this business? 3. Is there a chance for making money in this line of business at Denver, or is that city comparatively well supplied with stationery stores?

Ans.—1. What is most needed are brains, health and industry. These are good capital anywhere. You can appreciate your own capacity in that respect. We have seen a stationery store started on \$150 and another on \$15,000. The first succeeded and the latter failed. It all depends upon your selections and just how big lines you want to carry; also upon your location. Generally speaking, \$5,000 to \$10,000 ready cash ought to set you up pretty well for a start, provided you have got the right sort of a place to start in and you don't want to splurge. 2. The percentage of profit is one of those things which we don't know anything about. It *might* be 100 per cent., but we don't think that it is. This again is a matter of circumstance. 3. We don't know what the chance of making money in the stationery business at Denver may be. There are eight or ten stationery houses there, besides about twenty printers, who have more or less to do with the stationer's business. There may be room for another.

Subscriber wants to know: 1. Who makes the "Peerless" lead pencil, and 2. Who is New York agent for Arnold's inks.

Ans.—1. Eagle Pencil Company. 2. There is no New York agent. The goods are imported by a number of the large wholesale houses whose cards may be found in our columns.

A stationer inquires if there is an article in the trade known as "sheet" mucilage and if so who makes it.

Ans.—There is a "sheet" mucilage made in

France, but we do not know that it is imported. We don't know of any made here.

F. H. D. & Co. inquire: Where can we get "Globe" playing cards.

Ans.—We don't know; think they are not handled in New York.

A. G. F. wishes to know where to procure the lacquer mentioned under the head of "Imitation Stained Glass" in THE STATIONER of July 19, and the price.

Ans.—Address E. E. Oudin, 32 Liberty street, New York.

G. W. H. asks for address of Pultz & Walkley Company.

Ans.—Plantsville, Conn.

M. L. M. & Co. want address of manufacturer of Webster's patent pencil holder.

Ans.—Sorry to say that we do not know it.

A subscriber wants to know how a plate ink is mixed so as not to "offset" when folded.

Ans.—We shall have to refer this to some of our experienced readers, who will, we hope, express their views. It will be necessary to know something about the press and the kind of stock. There are quick drying inks, but it is difficult to answer this question generally and make it specially applicable to any one requirement.

The so-called chaostype of Earhart, at Columbus, in Ohio, has set many printers thinking in Germany and Austria, and one of the first to imitate it was Herr Pfeiffer, court printer at Stuttgart. Another, Herr Otto, head-manager of the great Lloyd printing office at Trieste, has also found out a kind of chaostype, and has published his mode of proceeding. He cools a plate of iron—a common imposing-plate will do—and then throws on it, by means of a large spoon, molten type-metal, not in a regular way, but quite whimsically, changing the spot each time, but uniting the casts so as to form a plate. This will by no means be an even one on the side where it touched the iron, but the metal will have hardened in lines and curves similar to the veins of marble, and when this plate has been mounted it may be printed in different colors, and the print will show a marbled pattern. The process is quite a simple one and may be tried by every printer.—*Printer's Register*.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, October 10, 1883. }

THE MONEY MARKET.—The money market is amply supplied with loanable funds, but confidence has been so disturbed by an abuse of credits in the way of accommodation paper, dating of bills ahead and collusive preferences in assignments that the banks and discount houses are using much more than ordinary discrimination in the matter of discounts. The stock market continues unsettled, and the course of prices as baffling as ever. Government bonds are about steady, while railway mortgages are irregular. Foreign exchange was rather easier until about the close when bankers' short bills became firmer on an increased inquiry. Continental bills are a shade easier.

THE PAPER MARKET.—A little improvement has been shown in city trade for the current week, many buyers being induced to give orders under the belief that they will not be able to make as good terms thirty days hence as they can now, and having tested to their own satisfaction that they cannot buy quite so low as they could thirty days ago. In the straw-board trade, while a great many goods are being sold, dealers complain of the slim profits, owing to the cutting of prices. Straw wrappings are yet very dull and prices are with difficulty sustained.

THE STATIONERY MARKET.—Most dealers are doing a fair business—about what they could expect for this season of the year. Trade has overcome the drowsy lethargic aspect which characterized it during the midsummer season, and has assumed a brightness and activity that no dealer can reasonably find fault with. There is less hesitation among buyers, and goods offered a few weeks ago at a discount are quickly taken. There have not been so many buyers in town as in some weeks past, but this is not a discouraging indication, for dealers are receiving many orders from commercial travelers and dealers throughout the country. The trade in inks is exceedingly good—better than it has been at any other period during the year. In steel pens the demand is steady, and dealers generally are doing fairly well. In holiday goods there is also a fair amount of business doing, just about as much as at this period last year. Dealers in fine stationery report a fair degree of activity in their lines, and the trade in blank-books is about what it has been for some time past, fair and steady. The envelope trade presents little, if any improvement. The increase in prices has had no effect, and competition is so great in this branch of business that many dealers are in favor of reorganizing a combination for their own protection. This is scarcely to be wondered at when orders have been accepted by certain dealers at prices which yielded nothing above the bare cost of manufacture and material.

The Sunshine Publishing Company, Philadelphia, has paid in \$2,600 to the Bartholdi Statue fund, and C. F. Zink, manager of the company, has guaranteed on its behalf the further sum of \$50,000 by January 1, from its profits, as a subscription to the cost of the pedestal. Good for the Sunshine Company and for Philadelphia.

Stationery Trade. Our "Gravity" Pencil is the LATEST and most desirable Pencil in the the market. Carrying the Artist's LARGE Lead, and working on the principle of gravitation, it is unexcelled for business purposes.

ENGLISH HAND-MADE PAPERS

ORIGINAL
EYNSFORD
MILLS,

WATER-MARK:

FELLOWSKENT,
ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers

Lor Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

TESTIMONIALS.

"I am most emphatically pleased with the Prouty. I would not trade it for a C —-press (price \$1,000.) It runs easier, it is much simpler, and does its work as rapidly and well"

J. F. MITCHELL, Greenville, Texas.

"Would not exchange it for any of the 'Big Injun' presses."

J. A. AVERY, Waukegan, Ill.

"The Prouty is the 'Boss press.'"

C. G. STARKS, Berlin, Wis.

"For the country office, printing 1000 to 4000 circulation, there is no other press worthy to be compared with it."

Waterloo TRIBUNE, Waterloo, Iowa.

"We profess to be a practical pressman, and having had experience with nearly all kinds of presses, believe ourselves to be a competent judge. The Prouty is the simplest and easiest running power press in the market, and will do as good work as any machine made." F. M. HAISLET, Newhampton, Iowa.

WETTING LEAD-PENCILS.

The act of putting a lead-pencil to the tongue to wet it just before writing, which is habitual with many people, is one of the oddities for which it is hard to give any reason—unless it began in the days when pencils were poorer than now, and was continued by example to the next generation.

A lead-pencil should never be wet. It hardens the lead and ruins the pencil. This fact is known to newspaper men and stenographers. But nearly every one else does wet a pencil before using it. The fact was definitely settled by a newspaper clerk away down East.

Being of a mathematical turn of mind, he ascertained by actual count that of fifty persons who came into his office to write an advertisement or a church notice, forty-nine wet a pencil in their mouths before using it. Now this clerk always uses the best pencils, cherishing a good one with something of the pride a soldier feels in his gun or his sword, and it hurts his feelings to have his pencils spoiled. But politeness and business considerations require him to lend his pencil scores of times a day. And often, after it had been wet till it was hard and brittle and refused to mark, his feelings would overpower him. Finally he got some cheap pencils and sharpened them, and kept them to lend. The first person who took up the stock pencil was a drayman, whose breath smelt of onions and whisky. He held the point in his mouth and soaked it several minutes, while he was torturing himself in the effort to write an advertisement for a missing bulldog. Then a sweet-looking young lady came into the office, with kid gloves that buttoned half the length of her arm. She picked up the same old pencil and pressed it to her dainty lips preparatory to writing an advertisement for a lost bracelet. The clerk would have stayed her hand, even at the risk of a box of the best Faber pencils, but he was too late. And thus that pencil passed from mouth to mouth for a week. It was sucked by people of all ranks and stations, and all degrees of cleanliness and uncleanness. But 'twere well to forbear. Surely no one who reads this will ever again wet a lead-pencil.—*Ex.*

AN ANCIENT GREEK BRONZE HORSE.

Grecian reports state that recently, as some Eginatan fishermen were fishing for sponges, near Delos, they came upon an ancient bronze horse at the bottom of the sea, about two fathoms and a half deep. It is described as being of colossal size and almost covered with shell fish. After much effort the fishermen succeeded in breaking off one of the feet of the horse and took it home to Ægina, where they offered it for sale. The matter came to the knowledge of one or two archaeologists, who purchased the equine bronze foot. This they found to be of excellent workmanship, and it appears clearly to indicate that the statue is a valuable relic of antiquity. It has accordingly been determined to endeavor to discover the whereabouts of the horse and to fish it up if possible entire. It is suspected that the statue is probably an ancient votive offering, which was once set up in the Island of Delos. The interest felt in the matter is all the greater as, if the work is recovered, it will be the first bronze horse of a large size which has been preserved since the classical age of ancient Greek art. There are very few equestrian statues preserved from ancient times, and hardly one which can be demonstrated to be of Greek origin.

We all need courage for something or other.

NEW LIST AND DISCOUNTS OCTOBER 1, 1883

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.

One-half the time and three quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

HOLIDAY NOVELTIES.

The market is literally piled up with holiday novelties in the shape of plush goods. These goods have been running now for several seasons, and for this reason, and the overcrowded state of the market, the producers cannot expect a large trade unless their manufactures have special claims of merit, by way of novelty and superior quality. There is, perhaps, no house in the city which comes nearer the mark in this respect in its line of manufactures than that of Berlin & Jones. That this remark is true, a brief inspection of its endless variety of novelties cannot fail to convince any one. The whole line of productions of this firm bears evidence of a most pains-taking and laudable effort to outstrip competitors, especially in point of novelty, to say nothing of variety and quality.

Its line of jewelry, comb and brush cases, of which it has several varieties, is very attractive to say the least. One variety has an oval top decorated with a hand-painting in the highest style of art. It is richly trimmed in velvet plush, and its various compartments, receptacles, &c., will make it a most welcome companion to any lady of refined tastes.

A novelty in writing-cases has a revolving lid which is opened by pulling a drawer, the lid sliding back on the same principle as the revolving desk. This is trimmed in the finest variety of plush and alligator leather, and lined with blue satin.

Another novelty is the "Papeterie Piano," which is a papeterie in the form of an upright piano. It opens on the top like a piano, and while it does not have the novelty of producing music, its admirable arrangement of drawers, &c., makes it all that could be desired in a receptacle for jewelry, stationery, &c., for which purpose it is intended.

In the "Album Jewelry Case," the idea is not entirely new, but the quality and finish of the article make it a thing well worth the attention of the trade.

In glove, handkerchief and collar boxes the firm has an endless variety in all sorts of novel forms.

A toilet box has a sloping mirror in the top, and drawers opening in front and at either side. It contains compartments for a comb, brush, perfumery bottle, &c., and is richly lined with blue satin.

There is a large assortment of bevel-edged hanging mirrors enclosed in cases or frames trimmed in plush and satin and having hand-paintings of flowers as ornamentalations. They are from two to three feet square, while others come in various sizes in the octagonal, diamond and other forms.

There are novelties in wisp-broom holders, fancy easels, fancy wall ornaments, &c., too numerous to mention. These are trimmed with artificial flowers, decorated with hand paintings, and many of them are decidedly unique in design.

A noteworthy thing in ladies' dressing-cases contains a secret drawer, which opens by a hidden spring. The lid is covered with a profusion of artificial flowers, arranged with excellent taste. Another design is provided with glass doors and a glass top. It has handles at either end, and on the whole is a genuine novelty.

The firm has also a large variety of imitation Japanese papeteries, jewelry cases, fancy boxes, &c., which are highly polished and decorated with pictures of Japanese characters and customs, and all are got up with such perfection that it would take a connoisseur to tell them from the genuine imported article.

The last, but certainly not the least noticeable

of novelties, is a variety of figures, comic and otherwise, intended for mantel and dressing-case ornaments. There is an ape carrying a perfumery bottle on his back, a goat with a saddle containing a pocket for a perfumery bottle on either side, &c. The idea is decidedly new, and these novelties will undoubtedly prove very popular and salable.

It would be an endless task to describe in detail the many novelties offered, and even what has been said about those noticed falls far short of doing justice to the subject.

THE MANUFACTURE OF BEADS.

Beads are largely made in Venice, where glass-making has always been a principal industry. It is said that the invention of beads dates from the thirteenth century, and is due to two Venetians, Miotti and Imbriani, who were urged to make experiments by the celebrated Venetian traveler, Marco Polo. Under the Venetian Republic, and for some years after its fall, says our consul at Venice, the exportation of beads had not reached the importance it has now attained. This was perhaps owing to the smallness of the furnaces and to the difficulty and length of the technical processes required for the composition of the paste. The Morelli, however, who in 1670 were the principal bead manufacturers, had four ships at sea carrying beads to the East on their own account, and they became so rich that in 1766 they entered the rank of the Venetian nobility on payment of a sum of 100,000 ducats to the republic. Since 1815 this industry has become so important as to give at the present time employment to about 15,000 persons. The traffic is carried on with all the world, but the principal exportation of beads is the ports of Asia and Africa.

An extraordinary stimulus was given to this industry a few years ago by the prevailing taste of beads for trimming ladies' dresses. A great extension of the manufacture took place, and the labor was paid so high that all who could do so gave up their usual trades for bead-making. But when the demand for beads declined most of the workmen who had been allured by fancy wages to the bead manufacture were thrown out of work and compelled to return to their former occupations. Whatever be the cause, bead-making has always been the special privilege of Venice, in spite of all foreign attempts to manufacture this article elsewhere. The wages in glass works are for a first master about eight francs a day, for a second master four and a half francs, and for the ordinary workmen from two francs to five francs a day. During the last five years the average annual exportation of beads has been 25,000 quintals, of the approximate value of 5,500,000 francs.—*Pall Mall Gazette*.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

Mfrs. of Bookbinders' Machinery and Tools.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

THE ATTENTION OF THE TRADE IS CALLED

- TO OUR -

NEW CYLINDER BOTTLES,

In two sizes—3 and 1½ oz.

The accompanying Cut represents the latter, actual size.

OUR LEADING INKS are all bottled in them except French, Extra Copying and Carmine. We also use the same style with wide, trumpet mouth, in 4 oz., for Carter's Muclage and Arabin, the latter a new product, from which all waste matter has been removed, so that every single particle will stick.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Each sheet is water-marked with name and date.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.

NEW YORK, OCTOBER 18, 1883.

WHOLE NO. 434.

Correspondence.

SHAWMUT SHAVINGS.

[FROM OUR REGULAR CORRESPONDENT.]

BOSTON, October 16, 1883.

A tour among the stationers yesterday convinced me that the end of the business boom is yet a far way off. Though dealers are always pleased to welcome the representative of THE STATIONER, they can't be expected to drop a customer to answer the numerous inquiries of an inquisitive newspaper man, and so your correspondent was often seated upon a box, anxiously waiting for "words of wisdom" that your readers might be enlightened concerning the movements of trade. From my notes I fear that some of my recorded remarks were intended for the customer, and lest the trade might think goods were going up, I must discriminate.

William A. Davis, manufacturer of the United States Treasury mucilage, reports trade as sticking to him with as much mucilaginousness as his celebrated preparations. Up to the first of October, his trade has been fully 50 per cent. above that of last year. His Western branch house, located at Chicago, over which C. H. Woodman presides, is doing a good business, as the trade appreciate the Davis new wide-mouthed sensible mucilage stands and new-style bottles with colored inks.

Knight, Adams & Co. were found as cheerful as circumstances of the season would admit. They are overworked; their store is open all day and part of the night; but they do rest on Sundays—through force of habit, or possibly in respect to an early principle. During the week, however, they are all selling large quantities of goods from their various lines of imported German and English novelties and plush goods.

Geo. F. King & Merrill seem to be taking the lead in pens, and are placing a number of different styles in the market. Their "Office Nonpareil," "Non-corrosive Bank" and "Court" pens, with the graded numbers, 1, 5, 7 and 9 "Nonpareil" pens, are meeting with a very steady demand from stationers all over the country.

Carroll W. Clark, successor to the N. E. School Furnishing Company finds an increased trade since the opening of schools. Everything needed in the schoolroom can be found at his establishment in just the quantity wanted. A specialty which this house is handling—the "Danner Revolving Book Case"—is a novel device for shelv-

ing books, and is so durable, convenient and satisfactory that it is finding many buyers.

Early in the season L. Prang & Co. presented to the trade a large variety of choice designs of Thanksgiving and Christmas cards, and the house is now pushed to its utmost capacity to supply the demand. Mr. Prang may be said to be the pioneer in the card business, commencing as he did, some thirty years ago, by making such designs for advertising cards as the taste of the various trades desired, and it is only during the past six years that the public taste has become educated to that standard known as "the æsthetic craze." Now, everything partakes of a touch of art, and decorations adorn furniture, chinaware, and in fact everything upon which a flower or bird can be painted or engraved. The love for the beautiful is being elevated among the people, and the best productions in art are eagerly sought for, and for the reason that L. Prang & Co. so carefully study the people's tastes, and are always presenting something a little in advance of it, their various productions in the card line meet with ready sale. Their prize exhibitions have drawn out the artists, and so numerous are the designs submitted that the house is able to choose from a large contribution, and only the very best are accepted for reproduction and presentation to the trade.

I was shown a large variety of cards; cards for every occasion—Thanksgiving, Christmas and New Year, many of them new designs; some of them humorous and some sentimental, and all by our best artists. A new design, but just introduced, the "Condolence Card," will fill a want long felt, and save the writing of tearful epistles.

A. L. D.

PREFERENCES OVER CREDITS, &c.

The recent action of the New York Chamber of Commerce in favor of eliminating the preference clause from the Bankrupt Act of this State has touched a responsive chord at other commercial centres, notably Savannah and New Orleans. The sentiment, however, takes a wider sweep than a mere reformation of objectionable State enactments, and the demand is imperative that Congress at its next session shall, without further unnecessary delay, exercise the power committed to it by the Constitution to enact an "uniform Bankrupt Law." As things stand at present, the State laws bearing on this subject are to the last degree chaotic, and in the hands of smart attorneys serve the purpose of defrauding the creditor rather than securing an equitable distribution of assets. There is an abundance of law, but no justice.

This state of things is a severe reflection upon respectable legislation, and we look especially to the representatives of the commercial constituencies, immediately upon the reassembling of Congress, to use their influence to bring about a change for the better. We are not unaware that there are conflicting views as to the Lowell bill and other propositions which were pending at the adjournment of the last session; but if there is, as there ought to be, a sincere disposition to deal with the subject with a single eye to the general welfare we apprehend there will be no difficulty in reaching a common understanding.

Incidentally associated with the growing feeling against the abuse of preferences is a growing commercial sentiment in favor of imposing a wholesome restraint upon over-credits. The subject, we observe, was brought to the notice of the Bankers' Convention at Louisville, but the utmost that could have been expected from that body would have been an informal expression of sentiment in favor of a restrictive policy. The practical remedy lies in the independent action of the banks themselves. The editor of the Louisville *Courier-Journal*, one of the speakers at the convention, placed the matter in a striking light. We quote:

"A few weeks ago Boston was startled by the failure of the largest leather firms in New England, if not in the world, with liabilities several million dollars in excess of assets. During the current year this concern had issued a statement of its commercial position, showing a surplus exceeding four millions, but at the failure there were unsecured liabilities of about three millions. Still more recently, New York is startled by a big failure, bringing on two others, the aggregate liabilities of which approached four millions. Chicago has had similar experience recently, but what other city, indeed, has been so fortunate as to escape? If any has been spared it has been purely a matter of luck, and not the result of forethought and systematic prevention. In these instances it has been found that there existed more or less developed systems of reciprocal note-making and indorsing, by which each individual's credit was multiplied several fold in the several banks which discounted his paper. Each bank flattered itself with the pleasing delusion that it possessed a remarkably valuable and liberal customer, who was trading considerably within the limits of his means; but at the final dénouement each was astonished to find that sundry other banks had been favored to the same extent, and that the sum total of bank discounts was perhaps five-fold the value of the available assets."

The remedy proposed for all this is, that the banks of each city should organize a central

agency, to which should be reported by each the name and the discount line of each borrower of the larger class; that this agency should be under the control of a responsible and discreet person, who would feel in respect to each bank the same obligations that an honorable cashier feels for the bank which employs him; that this person should furnish, on application from any bank, the aggregate discounts reported by all other banks against any applicant for favors; that the names of the banks so reporting or seeking information should be a sacred trust to the manager of the agency, to be divulged to no bank, or banker or other person, &c. It further claimed that the operation of this system would limit no man's credit unjustly, and that it would even raise the limit of availability of sound credit by furnishing the highest assurance that it is not overstrained, thus rendering impossible that class of credit which thrives on the isolation of banks and bankers and their ignorance of the general liabilities of their customers growing out of dealings with other banks in the same city. We give these propositions for what they are worth. There are some practical objections to their adoption, which will readily suggest themselves to every intelligent banker; but if they lead to discussion and open up the way for something better, our Louisville contemporary will not have addressed the convention in vain.—*Bulletin*.

THE METROPOLITAN DAILY PRESS.

XI.

THE TELEGRAM.

The *Telegram* is a child of the *Herald*. It was started not many years ago by James Gordon Bennett, the present owner of the *Herald*. For a long time its circulation was very limited, being scarcely more than 5,000. The paper actually derived its subsistence from its parent the *Herald*, like a suckling babe. This greatly incensed the elder Bennett, who never bore any love toward the bantling from the first.

For a long time the circulation of the *Telegram* was principally among the wealthy classes. It was quite a high-toned sheet both typographically and in the matter of representing the news. It established a society column and this is a feature of the paper to-day. It was the first journal to print its editions on tinted paper. Its style of presenting the news is peculiarly its own. It is managed with a great deal of enterprise, and at present boasts of an average daily circulation of 59,000. Of late years the *Telegram* has degenerated into a flashy, sensational sheet.

The paper has had many "shake-ups" in its editorial management. For several years it was under the charge of Edward T. Flynn, who a short time ago left the paper and became the managing editor of the *Herald*. The present managing editor of the paper is George A. Shaw.

THE NEWS.

The record of the New York *Daily News* constitutes one of the most interesting chapters in the history of American journalism. Its experience not only represents the success of an enterprise, but is identified with a system, the development of which has accomplished the most valuable results in the interests of the public, namely, the establishment of one cent newspapers in this country. The *News* is the pioneer of this class of journals.

The paper was founded in 1854 as an eight page three cent paper, and was continued until

1865 when its size was reduced to four pages and its price to two cents.

In 1864 it was purchased by Benjamin Wood, under whose proprietorship and editorial management it assumed considerable importance as a democratic newspaper. It was subsequently made a one cent paper, and the reduction largely increased its circulation. In March 1870 the *News* began to publish German editions, a practice which it still continues.

William L. Brown purchased a controlling interest in the paper in 1879, since which time there has been no change made in its ownership. The average daily circulation of the *News* is about 150,000, but occasionally reaches over 300,000.

THE COURIER DES ETATS UNIS.

The *Courier Des Etats Unis* was founded March 1, 1828, and is therefore one of the oldest newspapers in the United States. During the long period of fifty-five years, it may be said to have been the "guide, philosopher and friend" of the French immigrant. The paper was first issued weekly, then semi-weekly. It subsequently became a daily. It is under the present management of Leon Meunier, an accomplished French journalist. Under his management the *Courier* has become a popular American newspaper. There is a decidedly Parisian tone to the *Courier*, so far as its foreign news is concerned, that has secured for it a widespread circulation among Frenchmen alone, but it is read by people other than the French. Large numbers of Belgians, Swiss, and all educated Spaniards and Italians, read the paper. Moreover, it has become quite a favorite with Americans understanding the French language.

The circulation of the paper is about 20,000. The establishment is worth \$200,000.

HINTS FOR FANCY WORK.

The *Art Amateur* mentions a new wall-pocket, shaped like a pair of bellows, the back covered with satin, and the front-piece, which hangs forward, with plush, embroidered or painted in oils. The sides of the pocket are of satin and the nozzle and handle of brass. Small, but genuine, bellows, embroidered or painted, are now among the fashionable additions to London fireplaces. They serve to blow the dust from all the little ornamental articles that are vexation itself when dusted in the ordinary ways.

Cotton sateens, with delicately tinted or white grounds, and small figures in bright or soft harmonizing colors, have been sold this season as low as fifteen and twenty cents a yard. They are thirty-two inches wide, and are very pretty for bed-room window hangings, to dress old-fashioned hour-glass tables, or the still older half-round or square toilet tables. If one has inherited a straight-posted, rush-bottomed chair of seventy-five or a hundred years ago, it may be made a thing of cheery neatness, if not of beauty, by covering it all over with one of these bright sateens. If the seat of the chair is too much worn for service, take out the rushes, and with folded strips of bed-ticking weave in basket-work a firm new one, fastening it securely to the frame. Make a cushion covered with the sateen for this seat, finished with a deep flounce or valance falling nearly to the floor.

Birch bark, carefully gathered and used with discretion, will make a variety of pleasant little souvenirs. Pieces two or three layers thick, if the layers adhere firmly, with some simple design or sentiment painted upon them, may be used for cards, book-markers or blotter covers. It is best not to attempt any elaborate use of colors; one color is generally most effective. Vandyke

brown in water-colors, or burned sienna in oils, is good. Oil colors are far easier to use because of the dry, chalky or corky dust with which the bark is frequently covered; but they should be mixed with a preparation like that used in painting on textile fabrics, to prevent soiling the bark beyond the design. Single layers of a paper-like texture, such as may be split almost indefinitely from a large piece of the dry bark, serve nicely to cover small boxes. Cut to fit and paste on like paper with tenexine, dextrine or any good mucilage. When dry they may be decorated with pen or brush

JAPANESE WARE.

While the better pieces of Banko ware are all made with the thumb and finger, the commoner goods are shaped on a wooden mold; and in the case of teapots nearly all have a knob so attached to the lid that it will rotate, or a ring pendent from the handle which will swing. Many have the handle perforated as a fine geometrical pattern.

Of Banko wares it may be remarked that the particular forms of handle, which are undoubtedly Japanese, are that which arches the orifice of the vessel, as the handle of our pails, and that which corresponds with the handle on our saucepan. Although the looped handle, similar to that on our teapots, is no longer uncommon, and although I see before me, as I write, five specimens with this form of handle, there is every reason to believe that it was derived from European examples brought into the country by the Dutch. Yet, on a Chinese jug, which was undoubtedly made four hundred and fifty years since, I see this form of handle, and on several ewers preserved at Nara are examples of a similar character. This form of handle, then, may have been derived from Continental Asia and not from Europe.

Some specimens of common Banko ware are formed of a red earth, from which large panels have been cut, and the opening thus formed replaced by a semi-transparent white clay. In a teapot of brick color, and with a "stippled" surface, having the texture of "morocco leather," are two panels of white earth, the one having the form of a fan, and the other a card-oid or blunt heart; but this ware is modern.

Another recent form of Banko has a marbled surface resulting from the combination of imperfectly mixed clays; but the effect thus produced is coarse, and the ware has no art value.

Banko wares are often decorated; but while a few pieces by the best makers are tenderly painted, the decoration is generally both crude in color and coarse in character. This is to be regretted, as the ware itself is excellent. If accompanied by good painting it would be much sought after by lovers of beautiful objects.

Modern Banko wares are sometimes glazed, in other cases entirely covered by an opaque color (generally a full green or an unwelcome pink), and in some cases vessels are glazed internally only. The glazed ware, as well as the unglazed, may be decorated.

We not unfrequently see little rough teapots offered for sale for a few pence. These are imitation Banko wares made at Kioto and Tokio by potting cottagers, who perform their work in a most simple manner. Small though these teapots be, they are such as the Japanese have in common use, for while they frequently drink tea, they indulge themselves with a mere sip at a time. A large vessel or a large sip are alike vulgar.—*Pottery Gazette*.

Anger and haste hinder good counsel.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U.S.A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (4) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

→THE NATIONAL PAPETERIE COMPANY,←

MANUFACTURERS OF

PAPETERIES, FRAMES, MIRRORS, AND FINE ART BRONZE GOODS,

SPRINGFIELD, MASS.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

LIBRARY LETTER TRAY.

Another of those useful devices which are ornamental in the library while subserving an essentially useful purpose is shown in the engraving. This is a new thing, known as the Library Letter Tray, made of convenient size, from walnut or ash. It is likely to be in demand.

NOVELTIES IN PAPETERIES, &c.

Berlin & Jones are introducing to the trade a very fine and large variety of papeteries, which being a line of goods distinct in themselves were not mentioned in connection with the plush novelties described at length in THE STATIONER last week. Like the latter, the papeteries are made up in many novel styles, and the material of which they are composed is of the best, while the finish and ornamentation are all that could be desired.

In fancy cabinets there is a large assortment to select from, sufficient to please all tastes. A novelty in the form of a square piano is provided with carved legs in bronze and gold. It opens like a piano, and is finished in the best variety of silk plush. Another style, octagonal in form, is finished with plush and silk cord, while its top is decorated with a beautiful embroidery pattern, worked in plush by hand.

Many persons will be delighted with a style having an adjustable mirror in the top, which can be slanted to any desired angle. The mirror is of beveled glass, while the general style and make-up of the article is tasteful and novel.

A pretty shape in cabinets is called the "New Cabinet." It has an oval top, is handsomely finished in plush of different colors and richly lined with puffed satin.

An attractive style is of the octagonal form, and is provided with highly polished nickel plated handles on either side, and has two lids in the top, opening from the centre. Each lid has a satin pincushion set in its top.

The firm has a cheaper line of papeteries made entirely of paper. A very pretty thing in these goods is the "Cottage Papeterie," which is made in the form of an ordinary cottage or dwelling-house. Colored pictures and figures ornament its exterior. This line includes "The Dog Kennel" and other forms of cardboard papeteries too numerous to mention.

A new idea in jewelry cases is shown in a style which is lined with blue satin, decorated with flowers and a tiny bird resting on the branch of a tree. This has a slanting front, and contains two drawers, one of which is intended for a lady's watch and chain and the other for a set of jewels.

A jewel case is covered with a fine quality of morocco, embossed with figures of flowers, &c. It contains a detachable top or drawer.

A handkerchief box has a spring lid, which on being unfastened springs open. It is ornamented on the top with a row of puffed satin of a pink color, which being surrounded by a background of crimson plush makes quite a pleasing effect.

The line generally comprises many designs which are entirely new and deserve examination.

NEW PATENTS.

No. 283,383. Indexing Books.—Herbert A. De Silvera, New York, N. Y., assignor of one-half to Poultney Bigelow, same place.

No. 283,389. Combined Pen-Holder and Cleaner.—Caleb Goodwin, Hyde Park, Ill.

—ROUTE!—

THE GREAT THROUGH ROUTE

Between the **EAST, WEST, NORTH** and **SOUTH**. This Great Through Route is now completed and in full operation, **RUNNING THROUGH PASSENGER TRAINS** daily as follows:

Three solid trains each way between Columbus Indianapolis and Peoria; two trains each way between Columbus, Indianapolis and Decatur; two trains each way between Sandusky, Indianapolis, Peoria and Decatur; two trains each way between Sandusky, Dayton and Cincinnati; three trains each way between Sandusky, Springfield and Columbus; four trains each way between Columbus, Springfield, Dayton and Cincinnati; two trains each way between Columbus, Springfield, Indianapolis and Chicago—with Sleeping and Reclining Chairs on Night Trains, and elegant Parlor and Modern Day Coaches on Day Trains.

Its track is laid with **HEAVY STEEL RAILS**, thoroughly ballasted, with easy grades and few curves.

Traversing as it does the heart of the three great States of Ohio, Indiana and Illinois, uniting in close business relationship the capital cities of the first and second, with the second city of the third, and passing through a large number of the most important cities and towns in each, and with all its central location makes it the **Shortest and Most Desirable Route** between the East and West.

THROUGH TICKETS and **BAGGAGE CHECKS** to all principal points, **NORTH, SOUTH, EAST** and **WEST**, can be obtained at any ticket office of the I. B. & W. R'y; also via this Route at all railroad offices throughout the country. Rates always as low as the lowest.

Don't purchase tickets to any point without first consulting the Agents of the I. B. & W. R'y.

Particular advantages offered to Western Emigrants. **LAND** and **TOURIST TICKETS** to all points reached by any line.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

IN answer to frequent inquiry made about our Novelties, we will furnish a

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

N. P. Miller, bookbinder, Franklin, Pa., died a few days ago.

Ames & Stuart, printers, Boston, Mass., have dissolved partnership.

W. B. Casey, bookseller and stationer, Mount Vernon, Ill., has failed.

Henry Bainbridge, who has been ill for some time, is improving slowly.

H. F. Mann has bought the stationery business of P. W. Campbell, Alliston, Ont.

An attachment has been issued against Union Durant, paper manufacturer, Newbury, Vt.

The plant of Jacob B. Smith, publisher of the *Times*, Altoona, Pa., is in the sheriff's hands.

E. L. Chapman has bought out the business of A. J. Hoisington, publisher, Great Bend, Kan.

The establishment of Robert Foster, bookbinder, New York city, has been damaged by fire.

L. C. Cox, publisher of the *Pomeroy Republican*, Pomeroy, W. T., has sold out to J. C. B. Lister.

The *Simitar*, published by G. P. M. Turner, Memphis, Tenn., has been damaged by water. Loss small.

Z. Crane, jr., of Dalton, has been nominated as a candidate for the Governor's Council of Massachusetts.

The *Chronicle* Publishing Company, Salt Lake City, Utah, has been dissolved. Joseph Lippman retires from the firm.

Marcus Ward & Co. are receiving large orders for their line of Christmas cards, and report trade generally to be good.

A company styled the West Newton Paper Company, West Newton, Pa., has been incorporated with a capital stock of \$50,000.

Bloomfield & Park, manufacturers of call-bells, New York city, have dissolved. E. S. Bloomfield, Jr., continues the business.

Among the out-of-town dealers who visited the city this week were Mr. Hapeman, of Hapeman & Osborn, Ottawa, Ill.; Mr. Hueston, of Columbus, Ohio.

The second contest for the best prize poem on Esterbrook's pens terminated on the 1st inst., and was decided in favor of Frances Helen Dieterich, of Galesburg, Ill.

A novelty in mantel ornaments is a sea-shell mounted on a frame and containing a bisque figure of a child in a graceful pose. It is quite cheap, novel, and decidedly pretty.

The "Stenograph" writing machine is attracting a great deal of attention among shorthand writers. It is said that a speed of 250 words per minute can be secured with it.

G. A. Whittaker, Washington, D. C., having got into his new and more commodious quarters at 1,105 Pennsylvania avenue, requests the trade to forward him their latest price lists and catalogues.

The Dennison Manufacturing Company has an assortment of patent ready-cut blanks for election stickers, labels, &c. These are put up in boxes of 100 or 500 sheets and being gummed are always ready for use.

Americans are no more dependent on the art and talent of the Old World for beautifying and adorning. At one time if an article of taste or superior quality was required, the artisans of Europe had to be called upon to produce it, if for a lady's dress or the decoration of a mansion. In those days we scarcely followed, where now we positively lead. In no branch of artisan labor has such progress been made as in that of the manufacture of articles for the toilet and room decorations, and in this line the display made by Henry Levy & Son, in their show-room at 477 Broadway, is replete with exquisite articles in plush, leather and velvet, made into brush cases and wall racks, jewel and toilet cases, liqueur and sets, dressing and odor cases, smokers' and manicure sets, writing desks and writing tables, fire and lamp screens, glove and handkerchief receptacles, sachets and many other articles adapted for useful and ornamental purposes. This house lays claim to the production of the highest artistic models. Quality is not sacrificed to show, and while it guarantees giving the best of quality, it unreservedly claims that its prices are much below an imported inferior article of similar character. The firm asks the trade to call and see its display and judge for themselves.

The subject of posing is exciting a great deal of attention among photographers throughout the country just now. E. & H. T. Anthony & Co. have four negative plates of photographs on exhibition, which are attracting much attention from professional photographers, as showing the artistic effects of the posing of the subject represented. These negatives were taken by J. H. Kent, of Rochester, N. Y. They are 18 by 22 inches in size, and were made on the special "dry plate" recently invented. Mr. Sarony, the photographer, it is said, will soon give a lecture on the posing of photographic subjects as an art. Posing has always been an important topic for discussion among photographers, but it has not been discussed so widely nor looked upon as constituting a large element in a first-class photograph until very recently. Of late years, however, leading photographers have adopted the custom of posing all of their subjects themselves—a matter which was formerly left to their subordinates.

Milton Bradley & Co. have in preparation a special catalogue of primary school aids and elementary school apparatus, which will illustrate and price a line of goods which they have had in preparation for some years. It is the opinion of these educational publishers and manufacturers that the present tendency toward more practical education for the masses requires simple but practical apparatus for the demonstration of the facts of common science, at a price within the reach of the grammar grade of city schools, and of the higher ungraded schools throughout the country, and it is with this idea that they have been working for several years with the aid of some prominent New England educators. Their long experience in the manufacture of kindergarten material and apparatus has given them the knowledge which should enable them to work up this new field with success.

Joseph Sutphin, of Sutphin & Wrenn, paper manufacturers, Middletown, Ohio, executed deeds of trust for all of his property on Saturday last to D. McCallan and F. E. Gunckel for the benefit of creditors. His liabilities are not known. He had real estate valued at \$65,000. He was also owner of a large interest in the firm of Joseph Sutphin & Son, flouring mills, also located at Middletown.

George B. Stadden, printer, Nashville, Tenn., has sold out his business.

The firm of Carneau & Co., booksellers, &c., Salida, Col., has been dissolved.

Robert G. Dill has withdrawn from the *Times* Publishing Company, Denver, Col.

Henry Leutz, dealer in wall-paper, &c., Detroit, Mich., has made an assignment.

The *Democrat*, Leadville, Col., has been sold on chattel mortgage to C. C. Davis and others.

H. B. Kendrick & Co., booksellers and stationers, Saco, Me., are advertising to close out.

A dissolution has taken place in the firm of C. B. Woodward & Co., printers, St. Louis, Mo.

E. E. Smith has bought out the *Record*, formerly published by J. H. Hallock, Howard City, Mich.

F. H. Butler & Co., booksellers and stationers, Windsor, Vt., have sold out to Sarah Clapp.

H. L. Bradford, publisher *Modesto Staubuck*, Modesto, Cal., has applied for relief in insolvency.

John B. Wilson has bought a one-fifth interest in the *Chronicle* Publication Company, Salt Lake City, Utah.

The firm of Frederick Gordon, bookseller, &c., Glasgow, Ky., has been changed to Gordon & Garnett.

The stock of J. F. Willox, bookseller and stationer, Oshawa, Ont., is advertised to be sold by the sheriff at auction.

The X. L. C. R. Embroidery and Novelty Company (Abram Kaufmann, proprietor), New York city, has made an assignment.

W. H. Reynolds & Co. have bought out the business of W. G. Stubbs & Co., formerly publishers of the *Ashland Times*, Ashland, Ohio.

A dissolution has taken place in the firm of Goddard & Ryan, printers, New York city. The business will be continued by William C. Ryan.

Townsend Percy, assignee of two judgments against the *Music and Drama* Publishing Company, and of the Eagle Printing Company, on Tuesday, obtained an order from Judge O'Gorman appointing a receiver for the two companies.

The firm of C. Moore & Co., manufacturers and retail dealers in twines, &c., Philadelphia, Pa. has been dissolved, owing to the death of Catherine Moore. The accounts of the firm will be settled by Wm. E. Donovan, surviving partner of the firm.

The "Student's" complete index and scrap-file is a simple and convenient cabinet for keeping references and clippings in index form ready at hand when wanted. It is made in three styles by Milton Bradley & Co., Springfield, Mass. The same firm also makes a very convenient microscopic slide cabinet.

A unique thing in scales has lately appeared in the market. It is in the form of a nickel-plated crossbow gun. The object to be weighed is attached to the string of the bow, and its weight is indicated by a scale of weights marked on the gun. The scale is only intended for small weights, being limited to ounces.

The latest novelty in the shape of dolls is the singing doll, now on exhibition at the American Institute Fair. The body of the doll contains a perforated cylinder, which acts in conjunction with a set of reeds. The cylinder is set in motion by pressing a button, which operates a bellows, and which in turn forces the air through the perforations in the cylinder, caus-

ing the reeds to vibrate and thus produce music. It is quite a wonder to the children.

John O. Dunbar, publisher of the *Republican*, Tombstone, Arizona, has sold half of his interest in the paper to W. D. Crow.

A new style of ink-bottle is square in shape and has a groove in the top on two sides of the mouth of the bottle to serve as a penholder.

Jos. McDonough, Albany, N. Y., has issued a catalogue of new and second-hand books, including many that are scarce, such as *Americana*, &c.

The pulp mill of the Jackson Mills Company at Paris, Me., was destroyed by fire on Tuesday night. The cause is unknown. The loss is \$15,000; insurance \$10,000.

George H. Rogers has established himself as a stationer, blank-book manufacturer and printer, at Birmingham, Ala. His stock will comprise every article in the stationery line.

Charles L. Webster, 658 Broadway, New York, has established a depot in this city for the sale of James R. Osgood & Co.'s publications, of which he will carry a complete stock.

J. B. Lippincott & Co.'s Holiday Annual is out and ready for distribution to the trade. It is a very full catalogue and price list of goods suitable for the holidays and for the general trade.

J. B. Lippincott & Co.'s October bulletin is out. This firm is publishing a new edition of the works of W. M. Thackeray which, it is promised, will be the best and most complete ever issued from the press.

S. S. Stafford is doing a very large export trade in inks this season. He is sending large shipments to England, France, Spain, South America and Australia. He has seventeen agents who are engaged in pushing the sale of his inks in various parts of Europe.

A fire broke out on Monday morning in the paper stock warehouse of James M. Fitzgerald, at No. 137 South Fifth avenue, New York. A loss of \$3,000 was caused on stock. The building is the property of thirteen charitable institutions. The paper stock was insured in six different companies for \$60,000.

Clague, Wegman, Schlicht & Co., Rochester and Chicago, have recently bought from J. B. Devlin the Canadian patents on the Shannon filing devices, and will hereafter supply the trade in the Dominion with these goods from points where they will maintain branch offices. The large European demand for the Shannon files and indexes has made it necessary to establish a branch house for Continental Europe at Frankfort-on-the-Main, Germany, under charge of Heinrich Zeiss. The goods will be made at Frankfort. Another branch house will be established in London to supply the British and Colonial trade. Besides its general European trade the firm is getting orders from Russia and Sweden in large quantities.

F. Klemm, who was recently appointed to fill the place of the late Max Griebel, as manager of the New York branch of L. Prang & Co., will soon return to Boston and resume the position in the Boston house, relinquished by him to take charge of the establishment here. James S. Oakley, of the late firm of Oakley, Mason & Co., will succeed Mr. Klemm. Mr. Oakley is very popular with the trade, and is well qualified by experience and natural tastes for the position.

John Swinton has severed his connection with the *Sun*, and will establish a newspaper of his own. The first number will be issued on the 11th of this month, and as he says, "will be an exponent of the particular political and social views that I have advocated persistently for the past twenty-five years."

The drawing models manufactured by Milton Bradley & Co., Springfield, Mass., are doubtless great helps to the student of linear perfection. They are progressive in their design, and are said to be much favored by drawing teachers who have used them.

F. S. Bailey, of the firm of F. S. Bailey & Co., manufacturers of desks, &c., Boston, Mass., gives notice that he has transferred all of his property to a trustee for the benefit of his creditors.

Berlin & Jones have a number of elegant designs in papeteries which are fresh and novel. These goods are of the finest character, and will command a ready sale.

The firm of Evans, Sleeper & Woodbury, printers, Concord, N. H., has dissolved. The business is now carried on by Evans & Sleeper.

T. W. Croacher, dealer in picture frames, New Bedford, Mass., is offering to compromise with his creditors at thirty cents on the dollar.

The Kentucky River Mills, for manufacturing hemp twine, Frankfort, Ky., was recently burned. Loss, \$85,000. Insured for \$40,000.

C. D. Phelps & Co. have bought out C. R. Griffing, publisher of the *Coos Republican*, Lancaster, N. H.

S. D. Paddock, Jr., has sold out his interest in the Manlius Paper Company, Manlius, N. Y.

Brink McDonough & Co., publishers, Edwardsville, Ill., have dissolved partnership.

A. J. Coghill, stationer, San Francisco, Cal., has compromised with his creditors.

F. T. Albright, bookseller and stationer, Mason, Mich., has sold out.

A. E. Sweet & Co., publishers of the *News*, Las Vegas, N. M., have sold out to Ticer & Cook.

Mintzer Brothers, book mounters and gilders, Philadelphia, Pa., have been sold out by the sheriff.

The firm of Purvis, Metcalf & Co., stationers, &c., Utica, N. Y., has dissolved. A. J. Purvis continues the business.

Russell & Creamer, printers, &c., Philadelphia, Pa., have dissolved. Russell & Curtiss succeed to the business.

John Yule, paper manufacturer, Chambley, Canada, has failed, with liabilities at \$51,000. His assets are not known.

A dissolution of partnership has taken place in the firm of Pumphrey & Lowman, booksellers and stationers, Seattle, W. T. W. H. Pumphrey retires; J. D. Lowman continues the business.

Wimbush, Powell & Co., lithographers and printers, Kansas City, Mo., have purchased the one-third interest of W. D. Van Wagenen, and hereafter Messrs. Wimbush and Powell will continue the business, the firm-name remaining unchanged.

A fire broke out in Shepard & Co.'s bookbindery, No. 263 River street, Troy, N. Y., on Saturday night, causing a loss estimated at \$18,000 to \$20,000. Shepard & Co.'s loss on stock is estimated at \$3,000; insured. The loss on machinery cannot be ascertained.

F. H. Loss, Jr., 46 Murray street, invites attention to his line of hand-painted wooden goods, such as pallets, vases (four styles), card tables, smokers' sets, &c. The painting is in oil colors and executed by artists employed by Mr. Loss, and therefore of a high grade of art. The goods are adapted to the holiday trade. Sample cases will be made up for the accommodation of the out-of-town trade.

At four o'clock on Monday afternoon fire was discovered in the Elkhorn paper mills, belonging to Godfrey & Clark, Pittsburg, Pa. Both mills were totally destroyed, together with a large quantity of paper to be used in the manufacture of paper bags. Godfrey & Clark's loss will not fall short of \$165,000. The insurance is \$25,000. The origin of the fire is not known.

POSTAL RATES NINETY YEARS AGO.

Now that the two-cent postage law has gone into effect, the following provisions of the first law of Congress on the subject will be read with interest:

February 20, 1792, was the date of the first act fixing rates of postage on domestic letters, and established the following rates, to take effect June 1, 1792:

Act February 20, 1792, section 9, by land. For every single letter not exceeding 30 miles, 6 cents.

For every single letter over 30 miles and not exceeding 60 miles, 8 cents.

For every single letter over 60 miles and not exceeding 100 miles, 10 cents.

For every single letter over 100 miles and not exceeding 150 miles, 12½ cents.

For every letter over 150 miles and not exceeding 200 miles, 15 cents.

For every single letter over 200 miles and not exceeding 250 miles, 17 cents.

For every single letter over 250 miles and not exceeding 350 miles, 20 cents.

For every single letter over 350 miles and not exceeding 450 miles, 22 cents.

For every single letter over 450 miles, 25 cents.

For every double letter, double the said rates.

For every triple letter, triple the said rates.

For every packet weighing one ounce avoirdupois, to pay at the rate of four single letters for each ounce, and in that proportion for any greater weight.

PAPER GAS-PIPES.

Paper gas-pipes are made by passing an endless strip of hemp paper, the width of which equals the length of the tube, through a bath of melted asphalt, and then rolling it tightly and smoothly on a core, to give the required diameter. When the number of layers thus rolled is sufficient to afford the desired thickness, the tube is strongly compressed, the outside sprinkled with fine sand, and the whole cooled in water. When cold, the core is drawn out and the inside served with a waterproofing composition. In addition to being absolutely tight and smooth, and much cheaper than iron, these pipes have great strength; for when the sides are scarcely three-fifths of an inch thick they will withstand a pressure of more than fifteen atmospheres. If buried underground, they will not be broken by settlement nor when violently shaken or jarred. The material being a bad conductor of heat, the pipes do not readily freeze.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 18, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

It seems that stationers are not averse to entering into competition with houses in other lines of trade when they can get the chance. A peculiar instance of this has come to our notice within a few days, a well-known manufacturer having brought out a novelty in "blacking boxes"—not boxes of blacking. The trade may therefore adopt a new line and put forth claims to the patronage of those saucy but active gamins whose coat-of-arms consists of a shield with a blacking-box sable, the crest being a brush proper and the motto "Shine?" But is there not some one who will have the right to complain

In an English contemporary published in the interest of the pottery trade, we find a great deal of complaint about our tariff and much mourning over the decadence of the British pottery industry. This taken in connection with some figures lately submitted by one of our consuls invites reflection, which, however, we shall make very briefly. Since 1857 the value of exports of pottery from Great Britain has increased about 38 per cent., while during the same time the value of the imports of pottery into the Kingdom has increased about 600 per cent. Of course, under the free trade theory, the people of Great Britain have profited by the introduction of foreign goods, even if the home industry has suffered. The cry now is that wages have gone as low as they can be reduced, and that this element of cheapness can no longer enter into the calculation for competition. The British pottery trade is suffering, and its decadence is foreshadowed. Is this an example of the great benefit of free trade? If not, why not?

THE journal which records the transactions of the Society of Arts, London, is printing a series of lectures on "The Transmission of Energy." The general way in which the essayist approaches his subject suggests to us the idea that there is breadth enough in it to take up the consideration of individual energy and its contrasts and effects on the affairs of life. It will, of course, be understood by most, if not all, of our readers that the "transmission of energy" is what is commonly understood as the transmission of power derived from some prime motor and usually applied to industrial and purely mechanical operations. The transmission of energy, therefore, distinguished from its purely technical form is what we propose to say a very few words upon. We have observed that in many affairs of business there has been a want of force, and that this deficiency has arisen from the lack of original power. The head of the house is or should be in all cases the prime motor, and if there is deficient service we must trace it to that source. But in business, as in machinery, there is such a thing as driving things to pieces, and so it becomes an equal necessity that the driving power shall be so well balanced or governed that it shall go neither too fast

nor too slow, but that it shall keep all of the mechanism, dependent on it for successful results, running without variation up to the fullest capacity it is capable of attaining without injury to its different parts. In short, it becomes a duty to have work well and promptly done. The same rule applies to the general administration of business, and each line of trade must be kept in that perfect order which will enable it to profit the most at the least risk of damage and loss. It will be seen that there is one underlying principle therefore for business; that energy is necessary for its successful management, and that the transmission of that energy must come from efficient sources and pass through well adjusted intermediates before it can accomplish its perfect work.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

There are many nice things in the market! One cannot go the rounds even in the most indifferent way without seeing that there are devices which must attract attention—and buyers—because of freshness of design and originality of conception even when applied to old models.

* * * *

The foregoing remark is dragged out of me after a hurried glance at a new line of samples shown to me by a member of a William street firm. The priceless rarity of these samples may be imagined when I state that they are kept within a sort of dungeon under lock and key, in a building located in the centre of a square of buildings, which shut out Paul Frys of every description.

* * * *

If there is any reader of THE STATIONER who wants to know what these things above referred to are and where they may be got, I will say that they are papeteries, and can be had of the firm whose name is herewith forwarded to THE STATIONER, to whom they can apply for information. Commission not charged.

* * * *

A new man is coming to take the place vacated by our late friend Max Griebel. I really hope that he may be as successful in advancing the interests of his house. I don't know him, but shall beam on him once in a while when he isn't aware of it.

* * * *

There was a funny thing happened down in John street the other day. I shall not "give it away," though! Perhaps — thought he was smart, but for once the biter was bit. I shan't say anything more about it, for I know that somebody might not like to have the "boys" get on to the joke.

* * * *

I want to know if Boorum & Pease are in the tack trade. Whether they are or are not, they must have a large stock of them on hand. I have reasons for saying this, and it must not be construed by the gentlemen mentioned as an attack on them. My patience has, I admit, been somewhat taxed all along of their store of tacks, but this inquiry is directly in their interest. Tax me if it isn't.

* * * *

Envelopes are said to be too cheap. This conclusion seems to be reaching a coincidence in the minds of several of the trade who have been in hot competition. But will the manufacturers ever think otherwise? Perhaps they will;

but if they do, will not proclaim it. There is a good deal to be said about this envelope trade, but it is a "touchy" sort of subject—*noli me tangere*.

* * * *

Can't the trade down-town get somebody to keep their streets clean? Customers like to skip to and fro, making short cuts from one house to another, but they don't want to go through an accumulation of sticky, oleaginous mud. I wonder how so many "nice" men in the trade can stand it. I shall begin to believe that if they don't stir up the street cleaning officials they are more nice than wise, and more inclined to shut their eyes to what is nasty than to be nice.

* * * *

What a lot of "veterans" there are in the trade. All of them are genuinely military, and when armed and equipped are the beau ideals of the girls, who admire their grizzly fronts and exclaim, "*Ah, que j'aime le militaire!*" It is astonishing how well the "old boys" hold their place in the affections of the dear creatures. What an impression they must be making at Newburg!

* * * *

This is a season of centennial aggregations. We have had no end of such celebrations lately and they have all been perfectly carried out. It is the size of 'em, however, that has helped. Just wait until the 25th of November when New York buckles down to her centennial "Evacuation." She is likely to make a big thing of it. There will be a big parade, lots of music, eloquence and bibulousness. John Cochrane has got hold of it and we all know his staying qualities. Line will be formed facing to the front.

* * * *

This event will be enough of an attraction to bring the out-of-town trade to the city. It will be thus in order to combine business with pleasure, and give a chance to pick up the very latest Holiday novelties, and all of the bargains that may be had for the asking. Come along and take it all in.

ANSWERS TO CORRESPONDENTS.

M. L. M. & Co., who asked last week for Webster's pencil holders, can get them of Chas. H. Whiting, 32 Bromfield street, Boston, who informs us that he can fill orders.

One of our subscribers thinks that perhaps the "sheet mucilage" asked for by "A Stationer" last week may be the "mouth glue" sold by Keuffel & Esser, New York. This did not occur to us at the time of answering the inquiry. The "mouth glue" comes in small, thin strips, and is utilized by engineers and draughtsmen engaged in outdoor work. It can be had of the firm mentioned.

W. E. J. asks: Who makes or sells Upton's liquid glue?

Ans.—We think that it is made by George Upton & Co., Boston, Mass.

A Bridgeport (Conn.) man has produced an invention so dangerous that the Government refused him a patent on it. The description tells of a hollow steel belt filled with compressed air from an air-pump, and which can be worn so that it is completely concealed, with the exception of a tiny nipple protruding through a vest buttonhole; a pellet of condensed poison placed in this nipple can be noiselessly sent, with force sufficient to penetrate a quarter-inch of rawhide, a distance of forty feet; and if the pellet penetrates the human skin, in fifteen minutes death ensues, although the first indications of poisoning do not appear under five minutes.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, October 17, 1883.

THE MONEY MARKET.—Loanable funds continue unseasonably plentiful, and the reports of heavy loans to prominent capitalists exerted no effect upon call loans, which continue 2 per cent. on stock collateral. On government bonds the rates to borrowers are $1\frac{1}{2}$ per cent. Though there have been one or two rallies during the week, the tendency of the stock market continues downward. Government bonds continue firm and railway mortgages irregular. Money is plenty and cheap, but confidence is decidedly weak. Sterling exchange is dull and rates have been slightly reduced, the supply of both bankers' and commercial bills having increased. Continental exchange is dull, but rates remain steady.

THE PAPER MARKET.—Business with the city trade has progressed very fairly during the past week, and may be said to be undergoing a steady and gradual improvement, the impetus given to it by the placing of orders at the mills and with dealers during the drought being maintained. Prices, too, retain all of the firmness of previous reports, notwithstanding that the production is increased considerably. The drought is not entirely at an end, as in some instances there are reports of manufacturers still being unable to run to their full capacity. There has not been sufficient rainfall to give full relief, as the water has soaked into the ground and not run off.

THE STATIONERY MARKET.—Trade remains about the same as last week. Some dealers report business as being rather quiet, but, generally speaking, it is quite satisfactory. Many dealers are often led to suppose trade dull by a superficial or casual observation of their business. They judge from the movements of employees, but on examining their books and comparing sales made at a corresponding period in prior years they find in many cases that they are doing better than ever. A sure test of the volume of trade done is the large shipments made by railroad and otherwise. The outgoing freights were never greater in volume at similar periods of the year than now. The toy trade is very fine and dealers in this line are reaping a harvest of orders. The trade in envelopes remains about as usual. Prices are unchanged and there is no perceptible difference in the amount of business. A dullness prevails just now in the fancy goods trade, which is not as brisk as it has been, but it may be said to be quite fair. Steel pens are showing a fair amount of business, and gold pens, also, are commanding a satisfactory amount of trade, as these goods are necessary to meet the demands of the holidays. In staple goods no complaints are heard generally.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SOME INTERESTING APPLICATIONS OF PHOTOGRAPHY.

For several years past D. N. Carvalho, the New York photographer, has made a specialty of the delicate use of photography, which is brought into play more and more in connection with criminal cases in which disputed handwriting, forgeries, counterfeit money, &c., are features. The results now achieved are the outcome of years of experiment, and Mr. Carvalho's gallery of records is an interesting illustration of what perseverance and ingenuity, aided by photography, can do toward solving apparently hopeless mysteries. In the course of a recent conversation with a reporter of one of the daily papers, Mr. Carvalho said:

"We can do a great many things to bring the truth to light by the aid of photography. There is scarcely a case nowadays in which it is not brought into play if disputed handwriting is concerned. Of course, the most famous case of late years was the Morey letter case. There is a photograph of the Morey letter up there in a corner. It yet remains a mystery, but we are certain that Garfield did not write it. I first found by photography that the envelope had been tampered with by the following process: Cutting the envelope open, so as to get a single thickness of paper, I put it between two sheets of plate-glass, and placed it where the sun passed through it, the camera being placed on the shady side. Although no half-erased writing could be detected on the envelope with the naked eye or a glass, the difference in the thickness of the paper where erasures had been made showed plainly, as the light came through more clearly, and the erased words, which gave rise to so much discussion, were discovered.

"Below the Morey letter is a photograph of the signature of Alonzo C. Yates. Yates, you may remember, was a rich Philadelphia clothier who, late in life, married a cook in the Astor House, and died, leaving a million or so to the wife. The daughters by a first wife disputed the signature to the will. I was employed by John D. Townsend to show the genuineness of the signature. We got thirty or forty genuine signatures of Yates admitted by both sides, and showed that a man never writes his name the same way twice. Then I took the signature of the will and another admitted by both sides, and enlarged them until each was nine feet four inches long. The peculiarities of the writing became so apparent when shown upon that enormous scale—the signatures were so evidently by the same person—that the contestants gave up the case.

"There is a portrait of Theophilus Youngs. He married a clairvoyant many years ago in Boston and disappeared. His widow pretended to recognize his body in one that was found in the bay soon after, and he was given up as dead. Some years after his father died, and the widow put in a claim for a share of the property. The contestants, by whom I was employed, contended that Youngs was yet alive, and eventually produced him in court. The alleged widow refused to recognize him, and I was called upon to prove he was the man. The widow produced a photograph which she said was one of the pictures of Youngs, her husband. A good many years had passed, and although the likeness was a strong one, there was enough difference in the appearance of Youngs and the photograph to make a jury hesitate. I put Youngs in the same position in which he was taken in the picture, the genuineness of which was admitted, and made a photograph of the same size. Then the likeness became more ap-

parent, and exact measurements showed the two faces to measure the same in all respects. For instance, the distance between the mouth and the eye, which is seldom the same in two persons, was exactly equal. Then one picture was made transparent and superimposed over the other, and the two faces matched perfectly. The jury decided that the claimant was not an imposter.

"In the case of Hall, the head clerk of the New York Treasurer's office, everything depended on showing that he changed a figure 5 into a figure 3. He ran away to Canada, and was brought back upon a charge of forgery. His counsel claimed that the figure had not been changed, and that if the mark of an eraser was found and that the figure 5 had been changed, it was caused by the accidental slip of an ink eraser used in the margin. I made photographs of the page, and, by means of a stereopticon, threw a picture of that particular figure upon a screen ten feet high. Upon that scale several interesting things came out. It was seen very plainly that the figure had been altered from a 5 to a 3, but the erasure had been made with a different material from the erasure in the margin. We tried a rubber ink eraser, and the result was the same as seen in the margin. Then we tried a steel penknife, and the result enlarged 1,000 times was the same as seen over the figure 3. This disposed of the 'accident' theory, and Hall was convicted.

"I was employed in the Cadet Whittaker case, and worked for weeks at the famous letter of warning—a few words scribbled on a piece of paper, which Whittaker was suspected of writing. All the cadets were called upon to give specimens of their handwriting, and the writing of No. 27 was declared by the experts to be that of the note of warning. I believed that it was not, and taking the specimen of No. 27's writing, upon which he was suspected, I duplicated the note of warning, cutting the same letters out of 27's specimen, and placing them together as nearly as possible in the order of the famous note. It was a work of tremendous labor, but when done it showed the innocence of No. 27. It was suspected that the scrap of paper upon which the note of warning was written was torn from a letter sheet which Whittaker sent to his mother, but that theory was disposed of upon enlarging the two edges to the size at which a fine cambric needle looks like a crowbar. Then it was seen that the two edges had never been together. The verdict in the Whittaker case was finally reversed upon the ground that the court had come to a decision from the examination of lithographs of the note of warning, which I proved, by comparison with a photograph, were incorrect."

The speed at which explosions can travel has been looked into by M. Berthelot. He took for the gases carbonic oxide and oxygen, and these he exploded in a tube sixteen inches long and one-third of an inch in diameter, by means of electricity. The rate observed was the unexpectedly high one of 2,500 metres a second.

In 1878 a remarkable discovery of bones of the fossil monsters known as iguanodons was made in a coal mine of Belgium. Three years were occupied in removing the remains, which are supposed to belong to twenty-three skeletons. One of the skeletons is now mounted in the animal's semi-erect position, and stands fourteen feet high, and extends over a horizontal floor space over twenty-three feet in length.

Pleasure is the reward of moderation.

Every article being made at my Factories enables me to offer the very best advantages.

Leroy W. Fairchild.

CHANGING THE COLORS OF FLOWERS.

In a recent essay Herr August Vogel alludes to the possibility of changing the colors of flowers at will by the application of suitable chemicals to the soil. In this author's view, tannin plays an important part in the generation of vegetable colors. It is found in almost every plant, the petals not excepted, and by the action of the most varying re-agents—alkalies, earths, metallic salts, &c.—it assumes the most manifold hues from pale rose to deep black. A darker color, therefore, is produced in flowers rich in tannin, when manured with iron salts, since, as everybody knows, tannin and iron salts dye black, and produce ink. This fact has been put to practical use in the culture of hortensias and dahlias. Blossoms of the former were changed from a pale red, when the plants grew in ordinary soil, to sky-blue when transplanted into soil heavily manured with iron ochre, or when watered occasionally with a dilute alum solution. Similar manipulations have enabled an English gardener to raise black dahlias. Florists are aware that change of location often produces new colors in flowers. The whole subject of the chemistry of vegetable pigments is, however, one of which very little is known yet, and which offers a promising field for experiment and research. In this connection it may be noted that the color of birds may be changed artificially as well as that of flowers. A young canary was fed upon a mixture of steeped bread and red Cayenne pepper, when, without injury to the bird, the pigment of the spice entered the blood, and dyed the plumage deep red. It is the opinion of the celebrated ornithologist, Russ, that the plumage of birds may be changed to any desired color by the use of appropriate re-agents.

CONSUMPTION OF GOLD IN THE ARTS.

The consumption of gold for other than monetary purposes has more than quadrupled in thirty years and has quite trebled in twenty years. It is more than five times what it was a century ago, when gold was used for personal ornament to a greater amount per capita than to day. The great mass of gold which has flowed from the mines has been absorbed in the same opulence and luxury of the times which have swallowed up the flood of genuine gems, great in volume beyond any former precedent and almost outnumbering the pasty jewels of the glassmaker's art. Five-sixths of the current production of gold is absorbed in the arts and manufactures of the Western World and in British India. A part of the remaining sixth is lost by the wear of coins, the forgotten hoards of misers, and in war, shipwrecks and fires a great proportion is lost and destroyed. It is possible that the production of gold may increase. It is also possible that it may decrease, as it actually has been decreasing for many years; but there is no uncertainty about the consumption, which is sure to grow with the growing opulence and luxury of the world. The consumption of the precious metal has been trebled within the past twenty years, and if it only doubles within the next twenty years it will exceed the production.

In the United States great quantities of it are used in jewelry and plating, while a comparatively large proportion of the entire amount is used in gilding porcelain and glassware, and it is in this particular branch of business that a marked increase in the price of gold would have a serious effect. Richly finished decorations cannot be produced without more or less gold, and in many instances it is applied with a lavish hand, as may be seen in Royal Worcester, Crown Derby, old or new Satsuma, old Beehive Vienna, and various other fabrics of rich goods,

in which gold ornament is the predominating feature. Of course, gold paste assists very much in making the relief of the patterns, but the amount of gold applied is by no means insignificant. Indeed, every decorating shop in the world uses more or less of it, and when the expenses of preparation are added to the cost of the metal, it becomes no inconsiderable item in the cost of decorating. Various methods have been employed in reducing gold to the state of an ordinary pigment, and the processes have been guarded with the greatest secrecy. Instances are not wanting where decorators, coming to this country and finding an opportunity open for business, have been compelled to pay heavily for a gold recipe.

One of the old English methods was to reduce the gold to an oxide by amalgamation with mercury, the proportion being about one ounce of gold to one-half pound of mercury. The gold was put into a ladle and allowed to acquire a high temperature; then the mercury was poured in upon it and stirred until amalgamation was completed. The mass was then turned into a basin of cold water, and washed until it was clear, and then the whole was passed through a piece of chamois. Flux and fat oil was then added, and the mass was ground until it was fine enough for application to the ware. The general method employed in this country in the early days of decoration was to take a sovereign or a five-dollar gold piece to a dentist, and get him to roll the coin out into a ribbon; one-half pound of nitric acid was put into a bottle, and into it bits of gold ribbon were dropped, and the bottle set in warm sand to accelerate the action of the

acid on the gold; a certain amount of mercury and nitric acid was put into another bottle, and both mixtures were allowed to stand until perfectly clear. Both mixtures were then put into a common receptacle, like a hand-basin, the gold first and the mercury following. The action of the mercury was to precipitate the gold to the bottom of the vessel, where it lay in rich, brown lumps of soft oxide. Washing, fluxing and grinding followed, until ready for use. In this way many a coin of the realm found its way to the decorator's palette.

A BIG AQUARIUM.

The Granton quarry, on the east coast of Scotland, admits the tide, so that at high water the inlet has a surface area of about ten acres and a depth of sixty feet in some parts. The mouth of this inlet is to be so closed that fishes and other marine animals may be unable to pass through it, while the circulation of the seawater will remain unobstructed. The inclosure will form a natural aquarium, which is to be stocked with marine life of all kinds. A laboratory for students is to be placed on a barge anchored in the quarry, additional quarters being provided in a cottage on shore. This curious scientific aquarium is being established under the auspices of the Scottish Meteorological Society.

A new fireproofing liquid is being introduced. It is a basic silicate of alumina, and it is said to be far better than tungstate of soda, because the cyanite does not scale off or evaporate, while the soda requires reapplication every week.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

HOME DECORATION.

Attractions nowadays for the house are most valued when they bear traces of age; hence, veritable antiques are in demand by the rich, while people of modest means patronize more or less the copies of old styles. Shops dealing in antiques and curiosities, as well as the better classes of second-hand stores, are besieged for treasures collected from all quarters in the way of tapestries, Dutch clocks, old English and Spanish carved mantels, china that has survived a century or so of wear, and bric-a-brac rich in historic associations.

Chairs, settees, book-cases and tables which once graced the rooms of America's first homes are pulled out of garrets and sent to decorators and furnishers for touching up, after which they occupy favored places in our modern houses. Old clocks are especially prized, and when a tall one, with great weights hanging on either side, is obtained, the owner is congratulated by every one for his possession.

While genuine antique furniture costs a large sum of money, exceedingly graceful and desirable patterns are furnished which afford admirable copies of English and other styles, dating back one, two and sometimes more centuries ago, at very reasonable figures.

Most of the modern furniture for dining-rooms reproduces antique designs. This is especially true of chairs and sideboards. The former often show the swell or rounding front. Among novelties are sideboards with panels of illuminated leather. Quite neat in style are sideboards having two cupboards beneath and a series of small shelves rising above, terminating in a picturesque railing.

Dining chairs with antique backs—often more curious than comfortable—are fashionably upholstered in embossed and illuminated leathers, with a border of big headed brass nails. Newer than the chairs just described are those with coverings of heavy antique tapestry.

Oak is still a popular wood for dining-room and library furniture, especially when English designs prevail. Mahogany is also employed. A very popular wood in furniture is cherry. This is made up with mahogany finish and brass trimmings. Mahogany is in large demand for furniture, and among what are termed fancy wood-ware cocobola, amaranth, real ebony and Chinese tea wood. For country houses, summer resorts and cheaper grades of furniture, ash figures conspicuously, and hazel wood is also employed.

THE AMERICAN INSTITUTE FAIR.

The display made by the various competitors at the Fifty-Second Annual Fair of the American Institute, which opened in the Institute building at Third avenue and Sixty-third street, on October 3, is quite full and complete. The main hall, especially, is crowded with exhibits. The fair has been thronged with visitors since the opening day, and is evidently not less an attraction than it has been in previous years.

The arrangement of the various exhibits, embraced by a thousand and one products known to the business, industrial and commercial world—mechanical, household, horticultural, agricultural, art, &c., is very much on the same plan followed on former occasions. Taking the exhibition as a whole, it is a fair collection of American manufactures and products, but many of the exhibits, while attractive to general visitors, lack novelty and interest as trade products.

The first object that engages the visitor's attention, is the model of an ocean steamship in miniature, which is inclosed in a glass case in the entrance to the main hall. It was furnished by one of the down-town steamship companies. Visitors, in passing through to the main hall, invariably pause to give it a share of their admiration.

Passing into the main hall an array of exhibits strikes the eye. A number of the most noticeable are furnished by the Goodwin Gas Stove and Meter Company and the American Meter Company. There are a number of improved gas stoves of various sizes. Some of those intended for the parlor are very ornamental, having marble tops and being decorated with designs in black, on a background of bronze and gold.

Fred. Ulrich, Jr., presents a miniature model of a theatre. An interior view is given, showing the stage, with the curtain up, ready for the first act. It is a pleasing attraction, but cannot be classed as a novelty.

Gold's Heater Company makes quite a conspicuous display with its line of manufactures. Some of the points claimed for the heaters of this firm are that they will burn any kind of fuel, are gas and smoke tight, simple in construction, easily managed, &c.

Gifford Brothers' home gymnasium is shown to good advantage in the main hall. Thirty combinations or exercises, it is claimed, can be obtained with this gymnasium.

A fine collection of Coetting's perfumes is presented. An interesting feature about this display is a model of the Brooklyn bridge constructed of cologne bottles.

W. G. Creamer's exhibit of fancy brass and bronze goods attracts a good deal of attention in the main hall. It consists of a collection of fancy inkstands, looking-glasses and other articles in the fancy hardware line.

One of the most interesting exhibits in the main hall is that of John Fletcher, who displays a large variety of fish-scale jewelry. The collection is composed entirely of scarf, shawl and breast pins, bracelets, earrings, watch-charms, &c., constructed of shells taken from the China and East India seas. In addition to his collection of jewelry, Mr. Fletcher exhibits a variety of shells made into mantel ornaments, each of which contains a bisque figure of a child. They are very novel and pretty.

The Kensington Tile Company has a full line of its manufactures on exhibition. The material of which these tiles are made is a peculiar quality of paper, embossed by powerful presses, combining many novel features. The dies used

in the embossing process are from models of first-class sculptors and retain all the peculiarities of the artists' touch. They are a fine imitation of majolica tiles.

The Medford Fancy Goods Company has a collection of silk brushes on exhibition. These brushes are soft and flexible, and can be bent into a shape to fit under the rim of a gentleman's hat.

In the line of rustic goods, the Rustic Manufacturing and Construction Company displays a

large variety of rustic settees, rocking chairs, vases, window boxes, bird houses, &c.

A decidedly novel exhibit is that made by the R. Bliss Manufacturing Company. It is called the "Pocket Croquet." With this apparatus a game of croquet can be played both indoors and outdoors. The apparatus can be used on the parlor floor or a small grass plot in the yard. It is a nice thing to furnish amusement on a rainy day, or to get a great deal of enjoyment from a small grass plot or yard.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

THOMAS NELSON & SONS

Have made arrangements with Messrs. ROMANET & Co., of Paris and London, which enables them to offer a Superb Line of New and Elegant Designs. Great care has been taken in selecting subjects, and every effort made to make this new line **THE** most popular.

Our Travelers are now on the road with Samples, and it certainly will be to the advantage of the Trade to see this line before placing orders.

No. 42 BLEECKER STREET, NEW YORK.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot,
Each sheet is water-marked with name and date.

Correspondence.

CINCINNATI GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 18, 1883.

The political excitement of the campaign just closed affected business very perceptibly here in the way of diminishing sales in the territory lying within the affected or infected State, that is, the State of Ohio. During presidential campaigns the effect on business has been felt much more seriously, and one is now approaching which promises to be very closely contested and to be no exception in its influence upon the business of the country. It is, perhaps, in the nature of things that such should be the result, but if it is not, and some men should devise means to protect business from the evil effects of political campaigns, he would prove a national benefactor.

The general tone of business here is considered by experts as healthy and sound. Money is fairly easy. Eastern exchange is in good demand. Borrowers are required to furnish unquestionable security. Comparatively little paper is on the market for discount, and collections are improving.

On last Saturday, at Middletown, Butler County, about thirty-five miles north of here, Joseph Sutphin, an old business man of that city, reported heretofore to be very wealthy, executed deeds of trust for all his property to D. McCallay and Charles F. Gunckel for the benefit of his creditors. Mr. Sutphin has been doing business in Middletown for many years, and has always been considered one of the wealthiest citizens of the place. His principal property consists of the controlling interest in the firms of Joseph Sutphin & Son and Sutphin & Wrenn, both of Middletown, the former firm running a large grist mill and doing a large business, and the latter extensive paper mills. The value of his property is about \$60,000. He has been in very poor health for some time and incapable of giving proper attention to his business, and therefore executed the deed of trust that the property might be disposed of without sacrifice and relieve him from annoyance and vexation. His physicians have advised him that he must be relieved of business cares. He has the sympathy of the entire community, and it is hoped that his business will be settled up and the mills run as usual. The news of his failure created much excitement in business circles. The amount of his indebtedness is not yet known, but it is believed and hoped that he will be able to extinguish his debts and have a neat margin to live on.

In Cincinnati the jobbers of fancy stationery are receiving splendid orders. Country retailers are duplicating their orders especially for Christmas cards. The output of this article already has been astonishing. A taste for fancy goods seems to be diffusing. Agencies for the diffusion of this taste are numerous and various, but not the least influential among them is the growing practice (which for years in this region has been large) of excursions from the country to the city. Then the show-windows have their effect, and these people who stop and look at them go home with an unconsciously elevated standard of taste.

In the book-printing line Robert Clarke & Co. keep doing their share of publishing law books. They are never out of work of that sort, and are doing a growing work in printing books on general and special topics.

Snider & Hoole have a sort of corner on their line of business which makes "good" and "better" the only predicable terms describing its condition. It is kind of betwixt good and better now.

But it is no use trying to call the roll of stationers proper and their near business kinsman in Cincinnati now. I will try that in my next letter, when, no doubt, better news can be told, though the whole truth squarely told of them now would not be bad.

W. B. Carpenter is away recreating—actually recreating, not off on one of those society trips which so often sends one home jaded and worn out!

Very few traveling men have called here within a fortnight. Among those who did and left their cards were W. H. Montgomery, of Livermore Pen Company, Chicago; J. B. Conover, New York; Mr. Harding, of Harding Paper Company, Franklin, Ohio; Mr. Blank, of Kohn, Holzinger & Co., New York; J. B. Gunn, of E. Faber, New York; Hopkins, of Liebenroth, Von Auw & Co. A swarm of them is looked for as soon as a change of weather comes.

PRINCE WILLIAM.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Sept. 29, 1883.

Of all seasons of the year this is without doubt the dullest and deadest, so far as trade is concerned. And especially is this true of the English metropolis. Preparations for future business are doubtless going on, and the big manufacturers and importers are filling the

orders already received for winter goods and making up their stocks of those articles upon which they have reason to anticipate a run; but actual business exists only in infinitesimal quantities, and there is therefore little wonder that wholesalers and retailers alike have taken themselves off to Brighton or Paris, Scarborough or Baden. I mean, of course, those who can afford that luxury, not all of them by any means, for what with diminishing profits and increasing expenditure—rent, taxation, &c.—there are not a few, even among those who own big premises and employ a small army of assistants, who hesitate to incur the somewhat indefinite outlay involved in that serious step, "taking the family out of town." Of course, the popular health resorts are excepted from the above remarks anent business. Naturally, when London is emptied of its customers, the watering-places and some other of the provincial towns "get the pull;" but of late years the "pull" has not amounted to much, if the provincials themselves are to be believed, principally, as they aver, owing to the cause which operates in the same way in London, the fierce competition of illegitimate trading. Apropos of this, I may remark that at a meeting of the liverymen of the city in the Guildhall to-day, a resolution will be proposed as follows: "We, the liverymen of the City of London, in common hall assembled, respectfully direct the attention of Her Majesty's Government to serious injuries inflicted on the tax-paying trading community by the federation of naval, military, civil and pensioned servants of the state for the purpose of trading with the general public, thereby depriving the tradesman of his livelihood and defrauding the national exchequer of a large amount of revenue."

There appears to be no diminution of the popularity of the art goods which have been introduced in recent years; the more solid forms of stationery may scarcely meet with any sale except for purely commercial purposes, but in fancy lines orders are always coming in. However frequent the visits one may pay to such storehouses of fanciful contrivances as that of Charles Reynolds & Co., in Milk street, one will always find many fresh additions to the novelties of which there are such seemingly endless supplies. In addition to stocking the goods of such manufacturers and importers as S. Hildesheimer & Co., R. Tuck & Sons, and many other houses, Messrs. Reynolds have a number of articles of their own manufacture. Among these may be mentioned numerous varieties of embossed note, envelopes, menu cards, invitations, &c., in which there are some very attractive lines, the embossing, combined with colors and gold, being very

perfect. These goods are put up in handsome boxes and form showy adjuncts to the stationer's window. Some ivory greeting cards, the inscriptions and part of design printed in gold, the remainder hand-painted, are another novelty. In hand-painted terra-cotta goods—plaques, vases, &c.—there is a splendid line; these articles are rapidly gaining in public favor, and deservedly so, being really artistic and at the same time very moderate in price. This firm publishes albums of views of all the principal towns in England, the latest edition being a new series of views of London, including a panorama of the Thames embankment, which are printed in imitation of photography, have attractive stiff covers and retail at one shilling.

However great the intrinsic merits of an article, nowadays, it must, in order to sell, be presented in an attractive form. Thus papeteries have largely superseded the stationery packets with which the public were once contented. In many cases inferior goods are palmed off in this form, but in some the articles are really good for the money. Thus Cowan & Co., of Edinburgh, have issued some attractive stationery boxes under various designations. The "Monks of Old" is a box quaintly adorned with mediæval designs and contains 40 sheets of antique note and 40 envelopes to match. The "Alexandra" is a box containing 50 sheets of cream-laid note and 50 envelopes. It is attractively got up and retails like the last at 1s. Another box, the "Albert," with 25 sheets and 25 envelopes; Albert sizes sells for 6d.

The stand-cards of S. Hildesheimer & Co. are meeting with considerable favor. They consist of two cards which intersect each other, forming a stand upon which photos or other articles may be placed. They are to be had embellished with chromo-lithographic, floral and other ornaments, or with photographs from the studio of Payne Jennings. These last are especially chaste and pleasing, some beautiful bits of mountain and river scenery being reproduced with the perfection of technical skill and finish for which that artist is famous. Some additions have been made to the series of miniature etchings by Wilfred Ball—namely, "Round about Stratford-on-Avon" and "On the Isis." Three splendid oleographs, "Trafalgar," "Waterloo" and "Mary Queen of Scots," have lately been published by the same firm. The two first are vigorous in style; the last, of course, more subdued; but all are well printed and likely to be popular.

Some good examples of genuine English workmanship, combined with excellent materials, are to be found at J. Batson & Sons', Brewer street, Golden square, London. These consist of stationery, cabinets, liqueur cases, cigar cabinets, writing cases, &c., exquisitely finished in satin, olive, walnut and other woods, also brass and nickel goods, pen racks, letter clips, and other articles in great variety. Messrs. Batson's goods may be considered typically English in style and make, and their illustrated catalogue might be found serviceable where such articles meet with a demand.

Lawrence Brothers have been doing during the summer good business in their imported American lines, the productions of the Eagle Pencil Company, McLoughlin Brothers, C. C. Shepherd, New York; Milton Bradley & Co., Springfield, Mass., and other manufacturers. They keep a capital stock, and their articles are gaining ground in public favor. A combination of gum bottle and brush is a capital contrivance. It consists of a bottle conveniently shaped for handling, into the mouth of which a brush is

fitted in such a manner as to be always ready for use upon simply reversing the bottle, fitted with cap and filled with gum of first-rate quality. This handy article can be retailed at 1s.

W. F. C.

BOSTON WAFTINGS.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, October 23, 1883.

The week opens with a good, bracing atmosphere—plenty of ozone in the air—and, although overcoats are in demand, the change is refreshing. Trade is about as it has been for the past few weeks; everybody busy, with a prospect of work increasing as the holidays draw nearer. The show-windows are beginning to receive a little extra attention, and many novelties both useful and ornamental are displayed.

Ward & Gay have been so busy that they have been unable to get their sample-room into shape yet; but I was shown a set of Thanksgiving cards that for originality of design will certainly take all of the "stuffing," for they are a little "ahead." There are four cards to the set. An oval of about three inches is very tastefully trimmed with silk fringe which is pasted upon a square card having a bevel gilt edge. The fringed oval gives the appearance of a fenced inclosure from which protrudes the head of a "rooster" or "turkey-gobbler," very realistically done in chromo colors. Now, what could be more natural than for a well "bread" stuffed gobbler, whose sole mission in life is to grow fat that he may give joy to the gathered family, to raise his severed head and gobble out "A Merry Thanksgiving." These cards are unique and will undoubtedly have a big run.

The Robinson Engraving Company, which does a very large business in menu cards and fancy card-folders for advertising purposes, reports that trade has been better this season than for the past three years. It is also building up quite a trade for its Christmas cards, of which it makes many artistic designs.

D. B. Brooks & Co. are very much elated over the success of the "Congress Record" ink, a writing fluid which is very highly indorsed by those who have used it. The "Congress Record" ink is put up in small bottles, half-pints, pints and quarts, and knowing that when once used it will be continued, the house is giving away to every purchaser a beautiful patented inkstand. A fifty-cent stylographic pen which this firm is handling is meeting with a very ready sale among the trade.

Getchell & Harding, envelope manufacturers, and the only ones in Boston, are not doing as much just now as in past seasons. Their specialty is the making of odd-sized envelopes for the city trade, although they fill orders in this line for the trade throughout the country. Heavy paper bags are also manufactured by this house.

H. H. Carter, wholesale dealer in cards and stationery, has a very extensive collection of Christmas and New Year specialties. Some of the designs offered in a lot of Japanese hand-painted cards are really beautiful. Large sales and a number of them are reported, and Mr. Carter is preparing for all that comes.

A. L. D.

M. Marcel Desprez's invention for transporting electrical force to great distances has been applied to a waterfall near Grenoble, which is enabled to work, to the extent of seven horsepower, a sand-mill, a printing-press and other machinery at Grenoble.

THE METROPOLITAN DAILY PRESS.

XII.

THE NEW YORKER ZEITUNG.

The *New Yorker Zeitung*, a German morning paper, was established in 1845. It started as a two-cent paper. It was purchased in 1850 by Frederick Schniedler, who remained its owner until 1870, when it was bought by an association of capitalists with William Mayer as president. The name of the paper was changed to the *Allgemeine Zeitung*. The paper was published under that name until 1878, when it resumed its former title. On March 25 last the *Zeitung* became a one-cent paper. It continues to be published by an association, which is called the *New Yorker Zeitung* Publication Association. The paper has a circulation of about 12,000. It is independent in politics.

THE NEW YORKER HEROLD.

The *New Yorker Herold* was started September 25, 1880, as a one-cent evening paper, by the *New Yorker Zeitung* Association. Like the *New Yorker Zeitung*, it is independent in politics. The paper is conducted with considerable enterprise and ability. Its circulation, though limited, is very fair for so young a paper.

THE NEW YORKER VOLKS-ZEITUNG.

The *New Yorker Volks-Zeitung* appeared first on the morning of January 28, 1878, as a two-cent paper. Its founders were a combination of capitalists, styling themselves socialist democrats. The political tenor of the paper is radically socialistic. It is, in other words, the organ of the socialists, whose recognized leader in this city is Gustav Schwab. The *Volks-Zeitung* is published by the Socialistic Corporative Publication Association. Its circulation is 16,000.

PENTELIAN AND PARIAN MARBLES.

Although Pentelian marble and all monuments made of it have at first a beautifully white and brilliant appearance, yet after a while, sometimes within a few months, sometimes not for years, they exhibit reddish-brown spots and stains, and marble columns of Pentelian marble gradually become covered with a reddish-brown film of oxide of iron. The color comes from sulphide of iron (pyrites) that frequently occurs in fine streaks in this marble, and is oxidized in course of time by the action of air and water, and can then be recognized, very disagreeably, by their dark color. The spores of cryptogamous plants, such as fresh and salt water algae, germinate in these red streaks. The new academy at Athens was built of such Pentilian marble, and while hundreds of the blocks used still remain perfectly white and will probably remain so a long time, others already show yellow, brown, and even black spots. On the other hand, Parian marble, from which the old sculptors, Praxiteles and Phidias, chiseled their statues, has the property of remaining always white, because it contains no iron. Both kinds of marble have this excellent quality—namely, that they do not weather, lose their lustre and look like the shells of boiled eggs, as is the case with Carrara marble. The name of marble, from its Greek derivation, signifies a stone that glistens on the broken or fractured surfaces. To impart to new marble the appearance of old, which is necessary in repairing injured antiquities, it may be painted over with a very dilute solution of chloride of iron, whereupon the new pieces acquire a fine yellowish-red color, similar to that produced by the influence of air and water upon the old marble.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD
BERKSHIRE
MILLS.

LINEN LEDGER PAPER

Will stand the severest
test of COLOR, CLIMATE,
INK OR WEAR.

Being Triple Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

* * *

L. PRANG & CO.'S

Christmas and New Year Cards.

* * *

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar may be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

ENGLISH HAND-MADE PAPERSORIGINAL
EYNSFORD
MILLS,**FELLOWS**

WATER-MARK:

KENT,
ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers. For Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

TESTIMONIALS.

"I am most emphatically pleased with the Prouty. I would not trade it for a C—press (price \$1,000.) It runs easier, it is much simpler, and does its work as rapidly and well."

J. F. MITCHELL, Greenville, Texas.

"Would not exchange it for any of the 'Big Injun' presses."

J. A. AVERY, Waukegan, Ill.

"The Prouty is the 'Boss press.'"

C. G. STARKS, Berlin, Wis.

"For the country office, printing 1000 to 4000 circulation, there is no other press worthy to be compared with it."

Waterloo TRIBUNE, Waterloo, Iowa.

"We profess to be a practical pressman, and having had experience with nearly all kinds of presses, believe ourselves to be a competent judge. The Prouty is the simplest and easiest running power press in the market, and will do as good work as any machine made." F. M. HALSEY, Newhampton, Iowa.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

NEW PATENTS.

No. 283,872. Sales-Book.—Charles Wm. Earnshaw, Boston, Mass.

A sales-book consisting not only of a cover provided with amount and number columns, but of a transfer-sheet and a pack of sheets arranged together and with and connected to such cover and having the pack folded near the middle hereof, so as to cause the fold of it that may be resting on the cover to be longer or extend beyond the other or overlapping fold.

No. 283,876. Plate-Rack for Stereotype-Blocks.—Jos. L. Firm, Jersey City, N. J.

A plate-rack for stereotype blocks and the like, provided with a blade toothed on opposite edges and removably attached to its handle.

No. 283,883. Combination-Cipher.—Timothy Gruaz, Highland, Ill.

No. 283,906. Paper-Feeding Machine.—Frank H. Lauten, New York, N. Y., assignor of part interest to Ellison Saunders and Henry Carter, same place.

No. 288,902. Stamp-Canceller.—Albert Landon, Rutland, Vt.

No. 283,934. Type Setting and Distributing Machine.—Jos. Thorne, Port Richmond, N. Y.

No. 283,945. Method of Making Envelopes and Mechanism Therefor.—Charles F. Annan, Boston, Mass.

1. In an organized machine for making envelopes or equivalent articles, the combination of a support for a roll of paper, devices for trimming the edges of a continuously-moving web, devices for folding and gumming one or more edges of said web, cutting-off mechanism and devices for gumming each blank transversely at one or more points, and devices for folding each blank transversely at two points. 2. In an organized machine for making envelopes or equivalent articles, the combination of a support for a roll of paper, devices for trimming the edges of a continuously-moving web, devices for folding and gumming the edges of said web, cutting-off mechanism, a device for folding each blank transversely, means for gumming one edge of each blank transversely after the initial folding, drying apparatus, and a device for giving a second fold to each blank after it passes through the drying apparatus. 3. The method of making printed envelopes and equivalent folded articles, consisting in feeding a web of paper of indefinite length continuously forward, printing said web with inked type before it is folded and while said web is in motion, trimming its edges to form laps, gumming and folding the same, severing it transversely into blanks, and gumming and folding said blanks transversely. 4. The method of making envelopes and equivalent articles, consisting in feeding a web of paper of indefinite length continuously forward and while said web is in motion, trimming its edges to form flaps, folding and gumming its edges, severing it transversely into blanks, and gumming and folding said blanks transversely.

The antiquity of magnifying-glasses is indicated by the following passage from the writings of Confucius, the great Chinese philosopher, who died 478 years B. C.: "As we use a glass to examine the forms of things, so we must study antiquity to understand the present."

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

C. E. Johnson, publisher, Port Byron, N. Y., has sold out.

F. J. Kennedy, dealer in wall-paper, Auburn, N. Y., is dead.

H. R. Heinz, printer, Newark, N. Y., is advertised to be sold out.

L. Middleditch, printer, New York city, has been damaged by fire.

George Shoales, publisher, Ashton, D. T., has sold out to Cushing & Windom.

C. W. Knowles, publisher of the *Windsor Mail*, Windsor, N. S., has sold out.

J. H. Lamay, dealer in paper-hangings, &c., Holyoke, Mass., has gone into insolvency.

The Indiana Publishing Company, Indianapolis, Ind., has been incorporated with a capital stock of \$6,000.

Charles E. Dickinson has retired from the firm of A. H. Andrews & Co., manufacturers of school furniture, Chicago, Ill.

J. G. Bufford's Sons have recently prepared an illustrated catalogue of their extensive line of shape novelties, which will be ready for the trade in a few days.

George B. Hurd & Co. are having a large sale on the "Distaff" linen note paper and envelopes, which they have recently introduced to the trade. This paper is of American manufacture, but in finish and texture is equal to the imported Irish linen paper, while it is at the same time more reasonable in price.

The latest production in the toy market represents a monkey on a wagon with its tail attached to a bar, which is balanced and which has a weight or clapper at either end. Every one-half revolution of the wheels causes the gong to be struck by the clappers, which are necessarily manipulated by the monkey's tail. The toy is constructed of iron and tin.

E. & H. T. Anthony & Co. have just produced a line of photographs of the celebrated English actor, Henry Irving, who arrived in this country a few days ago. The photographs represent him as he appears in his comedies, melodramas and tragedies. They are quite a study, and will undoubtedly command as large a sale as the Langtry photograph.

Quite a pretty article in inkstands is called the "Good Luck" ink-stand. It is composed of a horseshoe resting in a slanting position with a handsome cut-glass bottle in the centre. The upper part of the horseshoe serves as a pen rack. The article is nicely polished and ornamented, and contains the words "Good Luck" in gilt letters around the curve of the shoe.

James D. Whitmore & Co. report that the volume of their business for the fall season is far in excess of that of last year, and the outlook for the remainder of the season is very satisfactory. Their line of plush boxes for the holidays has been a pronounced success, and the sales so far are greater than those of the entire season of last year. The success of this house in its varied lines is due to the fact that it does not spare expense in getting its designs, and everything manufactured by it is intended to be of the highest order only.

A valuable publication, "Copp's U. S. Salary List and Civil Service Rules," has been prepared by Henry N. Copp, a lawyer, of Washington, D. C. All the government salaries are given, from President Arthur's \$50,000 to postmasters with \$500, officials of the Treasury, Interior, War and Navy Departments, custom-houses, post-offices, and fully 20,000 Federal offices, arranged by States and Territories. Specimen examination questions for admittance to the civil service throughout the country are added.

Stone & Co., Denver, Col., have removed to their new store at 370 Lawrence street, where they have laid out a line of goods which evokes the admiration of the Denver people. The *Denver Tribune* gives a description of their stock, which seems to include standard products and to indicate a wide-awake appreciation of the advantages of keeping a first-class stationery store.

A novelty in book-rests, just introduced to the trade, has a slanting shelf on either side of a horizontal bar. In the centre of the holder is a perpendicular rod with an attachment for fastening the rest to a table. The bar holding the rests revolves the same as the revolving book-case.

French & Choate are offering to the trade a large line of Mark Twain's and adhesive wafer scrap books at greatly reduced prices. The firm is receiving large orders for its dictionary holders, book-rests, the Danner book-case and its other specialties.

Godfrey & Clark, paper manufacturers, Pittsburgh, Pa., announce that they will at once rebuild their mill, which was burned last week. They will continue production with their remaining mill and will meet orders as usual.

F. S. Bailey & Co., manufacturers of disks, &c., Boston, Mass., are reported assigned. Liabilities, \$1,850, of which \$400 is secured. About 40 cents on the dollar is expected to be realized from their assets.

The Russia Cement Company, Gloucester, Mass., received the gold medal of the London Fisheries Exhibition for its fish glue. This was the highest award.

A dissolution has taken place in the firm of Aschenfelter & Bisbing, printers, Philadelphia, Pa. A. J. Aschenfelter continues the business.

The Government Bureau of Engraving and Printing will open proposals for paper, typographic inks, &c., on November 14.

The stock of the estate of the Ontario Toy Company, Incorporated, London, Ont., has been sold for 35½ cents on the dollar.

Webster, Bates & Co., wholesale stationers, &c., Kingston, Ont., are selling out at auction.

The Moss estate on Chestnut street, Philadelphia, has been sold at public sale for \$63,500.

An attachment has been issued against Geo. S. Lester, stationer, &c., New Haven, Conn.

F. O. J. S. Bazin, of the firm of E. Fleming & Co., bookbinders, Boston, Mass., is dead.

Worthley & Ackerman, manufacturers of paper, Rochester, Mich., have sold out.

The firm of Curry, Clay & Co., stationers, Annapolis, Md., has made an assignment.

L. Prang & Co. report larger sales in their Christmas cards than last year.

Stone & Adams, publishers of the *Localizer*, Kittitass, W. T., have sold out.

W. H. Bowman, printer, Vienna, N. Y., is removing to Oneida.

C. T. Bellamy, publisher, Georgetown, Col., is dead.

J. Frank Giles, printer, Boston, Mass., has gone into insolvency.

Wm. S. Varney, printer, Waltham, Mass., has filed a petition in insolvency.

J. B. Hilmer has bought out the publishing business of W. H. Booth, Perryville, Mo.

David S. Brown, of Adair & Brown, booksellers and stationers, Peoria, Ill., has retired from that firm.

H. C. Yeiser, secretary of the Globe Files Company, has been in New York during the past week.

The \$25,000 mortgage held against the Great Western Printing Company, St. Louis, Mo., has been released.

Green & Holeman, printers, Walnut, Kan., have dissolved partnership. Mr. Green continues the business.

John H. Ogilvie, publisher, New York city, advertises that he does business under the style of J. S. Ogilvie & Co.

Janentzky & Co., importers and dealers in artists' materials, &c., Philadelphia, Pa., have changed their style to Janentzky & Weber.

Springer & Quelos, job printers, Cleveland, Ohio, have dissolved partnership. J. D. Quelos succeeds to the business.

R. McNeil, publisher of the *Index*, Dodge Centre, Minn., has sold out to O. H. Phelps, and purchased the *Journal*, hitherto published by W. G. Fellows, at Laresboro, Minn.

Henry B. Jones & Co., dealers in paper-hangings, Boston, Mass., recently reported failed with liabilities of about \$12,000, offer their creditors 50 cents on the dollar in notes at three, six and nine months. Most of the creditors have accepted.

The new fall catalogue of the National Publishing Company, Philadelphia, is out. It contains all of the cuts of the different styles of bindings for Bibles made by this firm. This catalogue is of great importance to the trade in making up their orders.

The new designs of ornamental adhesive hooks are now complete and the goods are ready for the market. The great success of this little device during its first season, promises a large sale for the present styles, which are in advance of the previous series in artistic beauty. The many uses to which they can be put makes the field for their sale almost unlimited.

Leroy W. Fairchild has just issued his catalogue of holiday novelties for this season. It is handsomely bound in pebbled Russia leather with red ends. The contents embrace a large variety of standard goods in gold pens and pencils, besides a large number of new designs of watch-chains, toothpicks, cigar-cutters, sportsmen's whistles, &c. The engravings are handsomely printed on toned paper, and are interleaved with a list of prices opposite each page of illustrations. There are over 1,200 illustrations, which display designs of all grades, from the plainest to the richest and most highly ornamented. Great care has been taken to please all tastes in the manufacture of these goods, both in design and price, as well as quality. In the arrangement of prices care has also been taken to avoid exposing the cost of goods, so that dealers keeping a limited stock can permit intending purchasers to make selections from the catalogue without fear of disclosing profits, a safeguard which will doubtless be appreciated by every dealer, as it is a new feature in catalogues of this kind. On the whole, the catalogue must prove of great convenience to those deal-

ing in the line of goods which it quotes and illustrates.

The business of John C. Williamson, publisher, New York city, has been put in the hands of a receiver.

The office of the *News*, published by Arthur Hamilton, Albuquerque, N. M., has been closed by the sheriff.

The creditors of John Yule, paper manufacturer, of Chambly, Canada, have accepted ten cents on the dollar.

The firm of Karle & Reichenbach, lithographers, Rochester, N. Y., has dissolved. The business will be continued by Wm. Karle.

John Leggett & Co.'s straw-board mills, at Middlegrove, Saratoga County, N. Y., narrowly escaped total destruction by fire on Saturday night last between 12 and 1 o'clock. The flames were however subdued by steam carried through hose from the boiler of the mill. Loss over \$500; insured.

A manual of horse hygiene, entitled "Horses, their Feed and their Feet," invaluable for the veteran or the novice, pointing out the causes of "malaria," "glanders," "pink eye," "distemper," &c., and how to prevent and counteract them, has been written by C. E. Page, M.D., and is supplemented with a treatise and notes on shoeing by Sir George Cox and Col. M. C. Weld. Fowler & Wells, New York, are the publishers.

EXPANSION AND CONTRACTION OF CREDITS.

The report of the creditors' committee on the affairs of F. Shaw & Brothers—the great tanners of Boston, whose failure last summer created a commotion at the time and contributed so largely to the feeling of distrust which now prevails in the business world—shows the flagrant manner in which credit had been abused by that concern. The report states total liabilities at \$5,889,376.99, while the assets represent \$3,856,297.53, or 65 per cent. of the liabilities. While the report does not show intentional criminality, or the misapplication of funds, it plainly suggests overtrading, a reckless use of credit, excessive confidence, and a singular disregard of caution. The firm tried to do too much business, and they used their credit as though it were profit actually earned. It is said that over a hundred suits are pending against the Shaws, although few suits have been brought by the one hundred and forty-five banks which are the chief creditors of the firm. This is probably not an exceptional case, as regards the abuse of credits during the last few years; and it is not, therefore, a matter of wonder that there should be at present so much distrust as to prevent capital from being employed to any considerable extent in new industrial enterprises, or that it should be difficult for even solvent business men to obtain the requisite accommodation from the banks and discount houses for the proper conduct of their affairs.—*Shipping List.*

**BLOTTER ATTACHMENT FOR NOTES,
&c.**

A new feature in blotter attachments has just been brought out in the shape of a blotter attachment, so arranged at the top of the book that both sides can be used, and which will outlast the contents of the book. A full line of elegantly lithographed notes, drafts, receipts and checks in several handsome designs, on first-class, tub-sized, loft-dried paper; also a complete line of shipping, package, rent receipts and order blanks are put up in this convenient form. The cover of the book opens upward instead of sideways, thus taking up less room than the old and awkward style of binding. All of the blanks have stubs and are perforated.

The name of the blank is tastefully printed on the cover of each book. Each book contains one hundred blanks. The goods are put up in the M. & H. blotter tablet, and are packed six in a handsome box.

INK FOR STYLOGRAPHIC PENS.

That the stylographic pen has become a public necessity is no longer doubted by those who have made the business a study. Like all new inventions, however, it has had its drawbacks, and one time so loud and numerous were the complaints against it that dealers refused to handle it or recommend it to their customers. The cause of this was largely due to the use of inferior inks.

The Mackinnon Pen Company was the first to make this known and to recommend "Caw's Ink," with the most gratifying results. Pens that were returned as worthless have been washed out and filled with this ink, and the owners have gone away satisfied. What is wanted for these pens is an ink that is limpid and easy flowing, and that contains no gum or sediment to clog the pen, nor acid to corrode it. Caw's ink seems to fulfill these requirements, and it is said to have the additional advantage of writing a deep black at first writing. It is manufactured by the Fountain Ink Company, whose card appears in another column.

The strength of the wish to do good is the measure of the power.

SIMON SAUTER, PRINTER, FROM BADEN, (Germany), is earnestly requested to send his address to his parents. A reward is also offered to those of his fellow-printers who can give any information about his whereabouts. **HEINR. SAUTER, Printer, Radolfzell, Baden, Germany.**

WANTED—BY A NEW ORLEANS, LA., Stationery Firm, a wide-awake man who thoroughly understands his business. Must be able to estimate and take orders for Printing, Blank Books, &c., and willing to travel about seven months in the year. To the right party liberal terms and a permanent position will be offered. Apply with references to "COMMERCIAL,"

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, OCTOBER 25, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

AN instance of the looseness with which credits are given, lately occurred in the case of an insolvent whose assets were short over a million of dollars in meeting his liabilities. How long are we to record such instances, and how long is the mercantile community going to stand up under such a system? Are we to wait until rottenness pervades every line of trade and the gangrene progresses beyond all hope of surgery? This is the question of the hour!

By a statute of Louisiana, a license fee is imposed upon all commercial travelers, whether resident in that State or in other States or countries. It will be seen, therefore, that the "drummer's tax" of Louisiana is not of restricted application. Under a late decision of the Louisiana Supreme Court, a person traveling through the State and selling goods by sample is a traveling agent under the statute referred to, whether he is paid for his services by a fixed salary or commission. This decision was given in a case where a demand was made for the recovery of a license fee from the representative of a New Orleans house, who claimed that he was a "clerk," and did not come within statutory limits as to occupation.

CONSIDERABLE attention has been attracted to the fact that in all of the more important failures in different lines of business, which have been reported during the last two or three months, the preferred creditors have absorbed the assets of the defaulting firms, and that the unfortunates who did not secure preferences were left to "mourn their loss." We will go further and observe that in some, and by no means few, instances the creditors thus secured were relatives of the insolvents, and that, while preference was apparently legitimate, whatever money there was to be derived went into the pockets of the family and that too frequently creditors not within the ties of consanguinity had the pleasure of contributing from their share to the family treasury. It is obvious that the system of preferences leaves a wide loophole for fraud, and that while we do not charge this fraud upon any one, it would be better that something were done to change this order of things and put all creditors on an equal footing. Where the opportunity for fraud exists, we may be sure that some one will take advantage of it sooner or later, and lest it should let out too big a burden upon the community, it ought to be shut off. Here is where a general bankruptcy law can be made effective. We have always favored a National bankruptcy act even while condemning the ill-features of that which once had existence. But, if the business community cannot see that we are lapsing into all of the errors and weaknesses which have, in the past, been detrimental to trade, and cannot unite to compel a strict observance of fair trading and prudent management there must be no fault-finding if things go on from bad to worse. Mer-

chants and manufacturers are alike interested in urging the prosecution of measures calculated to do away with frauds in trade and should actively and unitedly exert themselves to secure the adoption of such reforms and the passage of such laws as will prevent collusive failures, defeat reckless expenditures and debar false trading of every kind.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

Quite a general expression of opinion is to be heard in all lines of trade on the destructive features of some of the prevailing methods of doing business. THE STATIONER, from all that I can gather, has done good service in giving warning, and more than a few persons have commended it for the earnestness with which it has impressed counsel upon the trade. I find that it only needs a little calm suggestion, a pointing out of the truth, to cause men to stop and think. Thought is followed by conviction, and this in turn by action.

The movement for the formation of a Board of Trade entirely in the interest of the toy trade does not progress. It is of slow incubation, and is, I think, likely to remain in *statu quo*. There is some talk of holding a meeting to pursue this plan some time in January; but, as THE STATIONER has suggested, what's the use? Six of the toy importers have, I am told, lately taken membership in the Stationers' Board of Trade, and I doubt not that they will find that they can do much better there than with a new organization, which has to be nursed and coddled until it can stand upon its pins without extraordinary efforts for its sustenance.

What a trade the chromo trade is, to be sure! It is a powerful auxiliary to the stationer. And while one might wonder where all of the chromos go to, there seems to be an unending demand for new designs, costlier in production, more artistic in their character, and necessarily dearer to the purchaser. Fine goods of this sort are much sought, and people have become critical in their selections. This serves to show how readily American tastes become educated, and how quickly they acquire higher ideas of art. I am critical myself and don't mind having samples submitted for my judgment.

Some of the trade are very busy—almost too busy to employ the usual methods for sustaining life. They neither eat, drink nor sleep. And some people are dissatisfied with trade.

Talking about the rush of business, I am really sorry for George B. Hurd. Here is an instance of a man who, it might be supposed, has too much to do. I believe that he has taken to sleeping in his store. I don't know this for certain, but I am told that it is so. Isn't it too bad? Not even time to go to the opera or to take a hand in the Brooklyn political circus.

By the way, did you notice that that famous individual who is supposed to be responsible for the killing of one Walsh in a shooting matinee the other day is alleged to be a stationer? "Billy" Porter is said to have been doing business under some other name ostensibly in a legitimate way. I hope, however, for the honor of the guild that this may turn out to be a wrong story. Mr. Porter is one of

the believers in cheap credits. He takes what goods he wants and doesn't pay for them. His predilections in this line have led in the past to his confinement. It is to be hoped that his later achievements will lead to his suspension.

I understand that our friend F. G. Buford has been wrestling with a type-writer. He doesn't admire it—at least, I have been told that he doesn't. One of his clerks—who has been aiding him in overcoming the difficulties of the machine—has retired from the conflict with a sore and swollen arm. I am sorry that Mr. Buford should have worked his clerk so hard, but I suppose that it was the result of the great pressure of business.

One of the most communicative gentlemen in the trade is Mr. Huber. He is not voluble, but thoughtful—that is, he talks little, but thinks a great deal—and when one wishes to interview him, it must be as a mind reader. I am practising in this line, and have already attained considerable proficiency. For instance, on addressing a query to Mr. H., and getting from him audibly the monosyllable "no," I was able to gain further knowledge by tracing his line of thought. He mentally said: "I wish this fellow would get out." By dint of more mental pressure, I elicited the fact that he was bothered to know how much he might "give himself away" if he should say "yes" to my next inquiry. There were a few more internal remarks on his part, which I shall not repeat. Perhaps when next I see him I may get material for a longer story.

I find that there is some curiosity to know who "Lounger" is. Now, this interest is certainly gratifying. If what I might say was altogether of no account I don't know that anybody would care—a sixpence, who "Lounger" was. But it might as well be told. I am neither here nor there; I am in the trade and out of it. When you see me you don't see me, and when you speak to me you are speaking to somebody else. Now, if anyone can guess my riddle and tell me who I am, I will own up.

ANSWERS TO CORRESPONDENTS.

W. & H. ask where they can obtain a patent pole for lifting down boxes of envelopes, &c., such as was advertised in THE STATIONER some time ago.

Ans. — Williamson-Stewart Paper Company, St. Louis, Mo.

A new rubber eraser has one end slitted resembling somewhat a brush. It is claimed that it will not abrade the surface of the paper or destroy its fibre, while it retains all of the erasive qualities of other erasers.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, October 24, 1883.

THE MONEY MARKET.—Money on call continues abundant, rates on stock collateral remaining 3 per cent, and $1\frac{1}{2}$ to 2 per cent. on United States bonds. The stock market has measurably recovered from its demoralized condition last week. A comparison of current prices of leading stocks with those of a year ago shows a large shrinkage. Government bonds are firm as are also most of the interest bearing railway mortgages. Sterling exchange has declined under an increased supply of commercial bills, and the prospect of higher rates of money here in the near future. German reichmarks are a fraction higher, with which exception continental exchange is steady.

THE PAPER MARKET.—Trade among the city paper dealers, which opened this fall under many favorable conditions, has thus far progressed fairly satisfactorily when the dullness in most lines of general business is considered, and, although there have been some drawbacks, on the whole, the present outlook is for a prosperous trade during the remainder of the fall season. There has been an unmistakable desire among most dealers and consumers to buy moderately and cautiously, and to pay promptly for their purchases, and, as compared with other lines of business, failures among manufacturers and dealers have been very few, notwithstanding the margin of profit has been very small. Most of the mills have resumed running to their full capacity, and prices generally are well sustained, except for straw wrappings and straw boards, for both of which there is some irregularity and a weaker feeling.

THE STATIONERY MARKET.—There is little or no variation in the condition-of-trade this week. Business in staple goods is quite fair, prices remain firm and the outlook for trade is good. Commercial travelers are sending in the usual amount of business, and, while there are fewer out-of-town dealers in the city, enough orders are received by mail to make up for their absence. Dealers in fine stationery report a brisk trade in their line. Prices are firm and goods ordered are promptly paid for. In Christmas cards and art novelties generally, dealers are buying more heavily than last season. The quality and prices of these goods being higher than a year ago more money is required to secure the variety necessary to make up a dealer's stock. Dealers in shape novelties are very busy, but this is in filling orders received a month or two ago, and not in attending to new business. The blank-book trade is good, particularly in the finer grade of goods. The envelope trade remains steady with a tendency to advancing prices.

THE TRADE-MARK LAW OF HOLLAND.

The Amsterdam correspondent of THE JOURNAL forwards the following translation of the trade-mark law of Holland :

Art. 1. Any one wishing to secure the right of an exclusive use of a distinctive mark or device for his own trade or manufacturing products, must send two signed copies of a clear representation and exact description of such a mark or device, together with a statement of the description of goods for which the mark is destined to the Griffie (Recorder's office) of the Arrondissement Rechtbank (Court of Justice) of his town.

For the object defined in the 3d clause of Art. 5, the applicant may deliver a third copy.

If he has no domicile within the kingdom in Europe, the application must be made to the Griffie of the Arrondissements Rechtbank at Amsterdam, with election of domicile within the kingdom in Europe.

The application may also be made by a deputy duly authorized by a written procuration.

The mark shall not contain words or signs inconsistent with public order or good morals. It shall not consist of ordinary letters, ciphers, or words.

Neither shall it consist, even with trifling deviations, of the Arms of the Kingdom, Province or Commune, or of any other public corporate body.

The fee to the Registrar for remuneration and disbursement, on account of the duty devolving on him by Art. 2 and 5 is ten florins.

Art. 2. The Registrar shall immediately enter the application in the public register kept for that purpose, according to a form fixed by the Minister of Justice. In the case mentioned in the fourth clause of Art. 1, the procuration must be affixed to the register.

The Registrar is not bound to make the entry till the fee mentioned in the last clause of Art. 1 is paid.

The Registrar shall give to the applicant a dated certificate of the entry, docket the copies deposited, adding thereunto the date and number under which they are entered in the register, forward within three days one of the copies to the Department of Justice, and deposit the other at the Griffie.

By the above-mentioned department an advertisement shall be placed on the first day of every month in the *Nederlandsche Staats-Courant* (in Art. 1, and if the applicant has sent in a diagram or diagrams of marks sent in since the last publication, these are added, with a statement of the description of goods for which they are designed, and of the court where the application has been made. These advertisements are published in separate supplements of the *Staats-Courant*, which are to be obtained singly.

A similar publication shall be effected by the applicant within eight days after the application, in one of the newspapers of his place of residence, or, in case there exists no such newspaper there, it shall be made in that of a neighboring Commune or of the Province in which he lives. Should the applicant have no domicile within the Kingdom in Europe, he shall advertise in one of the newspapers issued at Amsterdam.

Art. 3. If the mark presented for registration is like, or not sufficiently distinguished from any existing mark to which another is entitled, or which has been previously deposited for the same description of goods, the owner, or depositor, of the latter shall have the right, within six months of the announcement in the *Staats-Courant*, to memorialize the Arrondissements

Rechtbank in whose rolls the mark is deposited, either in person, or by an empowered substitute, to prohibit the registration of the same. Within the same period, the Public Ministry may require the registration to be prohibited, if the mark is contrary to the enactment of the last clause but one of Art. 1.

The court shall decide in Council, after hearing the applicant for the mark, or duly summoning him on a day fixed simply by appointment, which day shall be made known to him at least fourteen days beforehand by intimation of the memorial, or of the requisition of the Public Ministry and of the appointment given.

This intimation shall be made in the case referred to in the third Clause of Art. 1 at the elected domicile.

In the hearing, the applicant, — and in the cases provided for by the second clause of the present Article — the public ministry, may further explain the grounds on which the suit, or the requisitor rests.

Before closing the hearing, the Judge fixes the day on which he will pass a decision. Higher appeal from the Judge's decision is not allowed. Within one month after the decision, appeal in cassation may be signified.

The memorial to this effect shall be signified to the applicant. In the case mentioned in the third Clause of Art. 1, this intimation is made at the elected domicile.

Art. 4.—If the court forbids the registration of a trade-mark, a written notice of this shall be given by the Griffier to the Department of Justice, and the decision shall be recorded in the register mentioned in Art. 2. Such notice shall also be given by the Griffier of the Hoogen Raad (Court of Cassation) of the result of the Appeal in Cassation, both to the Department of Justice, and to the Griffier of the court that gave the decision.

Art. 5. If within six months after the advertisement in the *Nederlandsche Staats-Courant*, mentioned in Art. 2, no request for forbidding the registration shall have been made, nor the Public Ministry have made any proceedings against it, or if the request of the applicant, or the requisition of the Public Ministry, have been refused in virtue of a legal decision to that effect, the mark shall be registered at the request of the applicant (upon his delivering a copy of the newspaper containing the advertisement, within the time fixed in the seventh clause of Art. 2) in the register deposited at the Griffie of the Arrondissements Rechtbank, according to a model drawn up by the Minister of Justice. The registering shall be duly dated. This registration shall be immediately intimated by the Registrar to the Department of Justice, in order that the mark shall be registered there also.

The Registrar shall give the applicant a dated certificate of the fact, and if the latter has sent in three copies of the mark, he shall attach one of them to the certificate. The Department of Justice shall take care to have the registration and the erasures alluded to in Art. 8, No. 1, advertised in the *Nederlandsche Staats-Courant* of the fifteenth day of each month.

These advertisements are to be inserted in separate supplements of the *Staats Courant*, which are separately obtainable.

Art. 6. Before openly advertising the registration, it is not of force against third parties.

After the public advertising of the registration, the right to the mark is deemed to be valid, from the day on which the registration mentioned in Art. 2 is effected.

The right is obtained only for those kinds or descriptions of goods for which the mark is intended according to the form of declaration.

Art. 7. The registers referred to in this law, besides the trade-marks registered or presented for registering, are on view for any one gratuitously, both at the Department of Justice and the Griffie of the Arrondissements Rechtbank. Anyone may, at his own expense, procure an extract or copy of them at the Griffie.

Art. 8. Title to the registration lapses in the following cases :

1°. By erasure at the request of the owner.

2°. After the lapse of fifteen years from the date of registration, if not renewed before that period expires, or if the renewal has not been repeated within a similar period.

Art. 9. The renewal of the registration shall be made in consequence of a request for renewal presented in duplicate to the Griffie of the Arrondissements Rechtbank. The request shall be registered by the Griffier in the public register, and a statement of the same inserted in the margin of the original registration, immediately after payment of the fees and dues, amounting to five florins.

He shall despatch within three days a copy of this declaration to the Department of Justice, to be registered there likewise.

He shall give the applicant a dated certificate of the effected renewal, and if the latter shall have sent in three copies of the request, one of these must be provided with such a dated certificate.

The renewal of the registration shall be advertised in the same manner as prescribed in clause four and five of Art. 5.

Art. 10. Any one using surreptitiously a mark to which another is entitled, either on his goods or packages, even though with a slight deviation, and selling, offering for sale, delivering or dispensing, or having such marked goods in store for delivery, shall be punished with imprisonment from eight days to three months, and a fine of from twenty five to six hundred guilders, together or singly.

If at the time of this infringement the offender has been sentenced for a similar transgression within five years, the maxima of these penalties shall be doubled.

Art. 463 of the Penal Code and Art. 20 of the act of 29 June, 1854 (*Staatsblad*, No. 102), are applicable to these offenses.

Art. 11. In judging of the facts of any of the

offenses mentioned in the foregoing article, the Judge may rule that the sentence shall be published, in which case he shall regulate the manner in which this rule shall be carried out, at the expense of the offender.

The goods seized in consequence of infringement as above, are as far as they belong to the offender, confiscated by the sentence.

The Judge may in all cases order that the marks placed on the goods or on the packages be destroyed, or if the destruction is not otherwise possible, the goods or packages shall be destroyed.

Art. 12, 13 and 14 are here suppressed as containing only transitional provisions, now no longer applicable.

Art. 15 Rescinded are : Articles 142 and 143 of W. v. S. (Criminal Code) as far as they concern Trade-Marks—Articles 16 to 18 inclusive, of the Law of 22nd Germinal an XI relative aux manufactures, fabriques et ateliers, the arrêté of 23 Nivose an IX relative à la marque des ouvrages de quincaillerie et de coutellerie, with the Imperial Decree of 5 September 1810 and the Royal Decree of 25 December 1818 (Stb. No. 47), which regulates the Trade-Marks to be used by the several Pipe-Factories, besides all other Legal Ordinances and Regulations bearing on this subject, and which are provided for in this Law.

Art. 16. This law is not applicable to Marks established by the Magistracy.

Art. 17. This law shall take effect on the 1st of January 1881.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—Ex. U. S. Minister, E. B. Washburne.

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—New York State Engineer's Report for 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.

One-half the time and three quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

GLOSSOGRAPH.

Signor Gentili, who was at one time a photographer in Boston, but who is now a citizen of Chicago, has invented a machine for the reproduction of spoken words, which he calls the "Glossograph." Unlike the phonograph, it promises to become practically useful, and it supersedes stenographic writing by having an instrument to do the writing authentically, registering the sounds on a paper ribbon from which they can be copied at leisure. The machine consists of a small apparatus to be placed in the mouth, connected by a wire with a battery in the registering machine, which can be close at hand or at any reasonable distance. If a speech is to be reported the reporter places the little apparatus in his mouth and repeats noiselessly to himself the words spoken by the orator. No sound is necessary, as it is the movement of the tongue and lips that produce the action, and the spoken words are instantaneously registered on the paper, which may be in a neighboring printing office, in a series of lines with slight curves and angles for the different sounds. The labor is nothing compared to stenography, and much greater speed and accuracy are insured than is possible with it.—*Ex.*

PREFERRED CREDITORS.

Investigation of the more important of the recent failures in this city and Boston shows that a very large proportion of the aggregate assets had been secured in advance to preferred creditors, leaving very little property for the creditors who were not preferred. There is no law to prevent this species of swindling, but there ought to be. The National Bankrupt Law, which was repealed a few years ago, prohibited preferences, but it was so complicated and ex-

pensive that it used up almost everything, leaving little or nothing for creditors. Our State insolvency law has a preference clause, the elimination of which by the Legislature has been urged by the Chamber of Commerce. But a better way to overcome the evil would be to enact the amended Lowell draft of a National Bankrupt Law. That would place all creditors on an equal footing. As the case now stands, merchants and manufacturers are at a loss to know to whom to grant credit.

A purchaser may show assets largely in excess of liabilities, but such a showing is worth nothing if the bulk of the property may be passed into the hands of friends or relatives in the advance of failure. In view of the recent fraudulent practice of preferring creditors it is no wonder that confidence, so necessary in business, should be seriously impaired, that creditors should have become suspicious, and that all classes should suffer the consequences. Honest business men should move in self-defense for a National Bankrupt law.—*Shipping List.*

THE SLATEOGRAPH.

Sunderlin, Taber & Co., Watkins, N. Y., who have been engaged in the manufacture of the slateograph for the past few years, have made some improvements in their composition and are now prepared to supply the trade with their new improved "rubber finished" slateograph, which they think is the best dry-copying process in the market. The "rubber finished" slateograph is used where duplicate copies of writings, drawings, &c., are required. With it from fifty to one hundred perfect copies can be made from a single writing or drawing. It is manufactured under the hektograph patent by license duly granted April 21, 1882, and has advantages over the hektograph, because it is easier cleaned after using, and is made in sheets, which are held in a clamp or frame of convenient size and proportions while in use. When one sheet is worn out it can be immediately replaced by a new one. The slateograph sheets are sold singly or by the quantity, as desired, thus avoiding the trouble and annoyance of refilling trays or pans by the old method. One of the prominent advantages of the slateograph is that the sheet or tablet may be easily taken from the clamp, and writings or drawings can be readily transferred to a book, thus enabling merchants, commission men, railroad companies, &c., to preserve in good form for ready reference copies of invoices, circular letters, orders, &c., sent or signed by them. For durability, convenience and economy, the slateograph is claimed to be preferable to any other copying process in use. This copying process with the transfer inks for using on it is manufactured solely by the firm above named, from whom descriptive circulars can be had on application.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a flexible air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

BOSTON ITEMS.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, October 30, 1883.

A very long spell of such miserable weather, as one is now forced to endure, would certainly drive a newspaper man out of the business. He starts out feeling gloomy, the skies above him are gloomy, everybody he meets is gloomy, and gloomy business is reported from all gloomy people. Even the few temperance people met with are complaining of too much water. But the weather prophets, and there are some few of them even in the stationery trade, report that there will be change when the moon changes, which glorious event is expected to take place in a few days.

Mr. Hooper, of Hooper, Lewis & Co., was found quietly standing by the big glass door of his establishment intently gazing upon the surging sea of umbrellas on the outside, and wondering, I supposed, when the rain would ever stop. His face gladdened when I entered, but he marveled much at the venturesome spirit of a news gatherer. "In such weather as this trade can't flourish," remarked Mr. Hooper, "but we have been doing a very good business, and expect to do even more; the house is well stocked with holiday goods, and we are fully prepared to meet all the demands incidental to the holiday season." In the manufacture of blank-books this house does a very large trade, having ample facilities for carrying on the business to the best advantage, and being very favorably known in trade circles.

The only perceptible falling off in trade is that from local buyers who prefer to wait for pleasanter days to do shopping. Orders are received with every mail, and packing and shipping continue with very little interruption. I. Baird is presenting a very fine line of cards and shape novelties which he expects will meet with a lively sale.

The Heliotype Printing Company is engaged in publishing a very beautiful souvenir album of the foreign arts and industries as presented at the Foreign Exhibition in this city. The work will be issued in twenty-five parts and sold by subscription. The illuminated cover is a handsome design by Ipsen, while four beautiful illustrations and a colored design will adorn each issue of the work. The illustrations will be by the Heliotype process and will include the most meritorious exhibits displayed at the exhibition. In size the album will be 11 x 14 inches, and the

best workmanship, paper and binding that the arts can produce will be embodied in the album. Gen. C. B. Norton, secretary of the Foreign exhibition will edit the work. A similar work is now in press for the city of Charleston, S. C., giving some fifty views of that city's architectural attractions, which are written up by the Mayor of the city. The sale of this publication is confined mostly to the citizens of Charleston who have subscribed in large numbers for it. The Heliotype Company has produced quite a number of such works, and has earned an enviable reputation for its Heliotype process views. Christmas and souvenir cards are also made by this company, as well as color work, book and newspaper illustrations.

The great American Exposition which opened in this city on the 5th of September last under the auspices of the New England Manufacturers and Mechanics' Institute, will close its doors on Saturday, November 3. The exposition has been very largely attended and the managers report a great success financially. The Foreign Exhibition will remain open some time longer, possibly until after Christmas. Many sales of imported novelties have been made at this exhibition and as the holidays draw nearer, buyers will be found more numerous. A. L. D.

TORONTO GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

Toronto, Ont., October 25, 1883.

Some time ago there was a man who had the audacity to assert that the world was round, and that it not only turned round every day, but went scooting 'round the sun once every twelve months; and for such an absurd and unscriptural proposition he was had up before the high and mighty ecclesiastical court of a certain city and politely requested to retract such a preposterous idea, or he might not find things quite agreeable. He retracted, but it is said he made a side-observation: "It does move for all that!" I had a friend once, an honorable gentleman, who always maintained that the world was flat—i. e., that it was like an enormous gridiron hooked on to the sun somehow. These theories, however, are out of date now, except this one, "It does move," and its movements very often defy all calculation. This last remark, of course, applies only to the Lilliputs who kick up such a dust on its surface. The inventive geniuses who are floating about are getting ahead of time, and are turning out so many things to improve and multiply production, that the world's markets are getting overstocked with everything. Now, if the world—that is, the in-

venting part of it—would turn their minds to the other side of the question, and invent consumers for their products, it would be very opportune. Of course, I have nothing to say against the old method, only it is too slow for present requirements. If the paper mills of the world make one-third more paper than is wanted, and are going to keep on, what are we to do to get it used up, unless we go into incubators and hatch out consumers by steam? Tell us, my learned friends! I started out on the moot question of the rotundity of the world, and its diurnal and annual motion, and have drifted into incubation. Well, as old Galileo said, "It does move;" but there are various other movements, and it is to note one of these that I have been all this while trying to get at. It is important, but at the same time I do not know that it will cause any hitch in the world's onward swing. I refer to the moving of W. J. Gage & Co. to their new and commodious warehouse on Front street. The rapid growth of the business of this house has made its old place for some time back totally inadequate for its requirements. It will now have spacious premises, fitted with all modern conveniences.

"Push on—keep moving." This is the principle upon which the old house of Buntin, Reid & Co. act. It reports a good season's business. Goods of its own manufacture are kept to a uniform standard of quality. The demand for its papers keeps its mills at work day and night the year round. Its envelope factory, which has been running now for more than twenty years, shows a steady increase. Prices for all kinds of stationer's goods, it says, are very low. Prospects for the winter point to a fair business, but it thinks that purchases will be lighter than a year ago.

"I'm always a-moving on, sir," says "Poor Joe" to the "Constable" in "Bleak House," and so say Davis & Henderson, but in a much more satisfactory way. Mr. Henderson has but lately returned from a summer in Europe, and has gathered many new ideas in the old world. They say they have all they can do, and this from a business point of view. I take it as being quite satisfactory.

Robert Marshall is getting out a new illustrated catalogue of his toys and fancy goods. Mr. Marshall's clients will certainly appreciate this enterprise, as it will enable them to make selections with much less trouble. The illustrations are well done, and when finished it will be one of the most attractive catalogues we have ever seen. We have no doubt the investment will pay well.

There are few of our old houses that move on with less noise and more satisfactory results

than the respected firm of Rowsell & Hutchison, which is always busy, and the only complaint about trade I have ever been able to elicit has been "too much to do."

A. S. Irving, manager of the Toronto News Company, says that the company was never so busy. Its sales this season are a third more than they were last year. It is agent for Prang and other Christmas card makers, and has taken large orders for these goods. It is also sending out large quantities of Christmas books and goods.

Copp, Clark & Co. are working night and day just now, they say, to get up with their fall orders.

Brown Brothers are also very busy, and so are Barber & Ellis.

It will be seen from the foregoing that our leading houses have no cause to complain, and that a good fall trade is assured. It may not, and it is almost certain, will not tot up so large an amount as last year, yet no one is disposed to grumble.

C. H.

CURIOUS FACTS ABOUT AMERICAN COINS.

"There is really no end," said an amateur coin collector recently, "to the list of articles collected in cabinets. I collect only American silver coins, and I know that there is a whole world of absolutely unsuspected details about the branch of collecting. There, for instance, is the mystery about the coinage of 1804. A small number of dollars was struck, and of these coins not one has ever been found. There are two specimens in existence of the 1804 dollar, but there is every reason to believe that these were re-strikes made in 1828 by some one in the mint at Philadelphia in a surreptitious and unlawful way for some collector who had influence. What can have become of those dollars that have disappeared so completely? From time to time at auction sales one of the re-strikes appears, and at each sale fetches a greater sum. As high as \$1,600 has been paid for one of them. But what shall be said of the half-dollar of 1804? Of these no less than 156,519 specimens were coined, yet none have ever been discovered. A certain number of half-dollars bearing the date of 1805 will, if examined closely, discover that the 5 has been struck over a 4. This only shows that a certain number of the 1804 half-dollars were never issued from the mint, and were converted into 1805 pieces, but it does not explain the total vanishing of those that were issued. There can be no doubt that something happened of a mysterious character which caused the dollars and half-dollars to disappear, for the quarters of that year are not particularly scarce; a fine specimen costs only \$10, and a fair specimen can be had for \$2. Yet there were only 6,738 pieces of that denomination struck in that *Annus Mirabilis* for us collectors, and of dollars there were 19,570. There were only 321 dollars struck the next year, and these were in all probability for the cabinets of collectors, for no dollar was issued in 1805. Then the coinage of silver dollars ceased, and did not begin again until 1836. It would be easy to frame the hypothesis that the larger American silver coins were over weight, and that merchants bought them up and sold them for melting. But although the facts in relation to the dollars bear out this theory, yet the annals of the mint about the half-dollars are opposed to it, for in 1805 there was a very large issue of this piece, and so on every year until 1815, when there was comparatively a small

issue. In 1816 there was no coinage at all of half-dollars. Coins of this denomination for 1815 are rather scarce, so that a fine specimen is worth from \$10 to \$20, according to its appearance.

"Coins are graded as proof, uncirculated, fine, good and fair. The thorough-paced collector has nothing to do with dealers or with auction sales, but hunts for his game with an eye ever watchful for a chance. When he passes the cribs where the ferrymen take the toll, his eye glances rapidly over the heap of coins spread before the official Cerberus. Should he see a dime or half-dime of suspicious appearance, he says, in a hurried way, 'Excuse me, I'm a coin collector,' and with that brief apology he picks up the coin, and after a short inspection, he replaces it by one of the same denomination, and departs with his prize perfectly heedless of the cutting way in which the toll-gatherer insists that he will not have his money handled by strangers. After a few skirmishes of this character, the ferrymen come to look upon him as an amiable lunatic, and whenever they receive an odd-looking piece, make a point of giving it to him in change. The great object of a collector is to complete a series—that is to say, to have one of every variety of any given denomination that has been coined. The most desirable in American silver coins are half-dollars and dimes, because there are fewer breaks in these than in any other American issues. The earliest pieces, of course, are not in circulation, and the collector who sticks to his programme—an excellent one—of never going near a dealer, nor frequenting any auction sale, will not be likely to have any specimens of these in his cabinet. But it is well to know that before the mint was organized, there was coined somewhere a small supply of 'dimes' and half-dimes mentioned by Washington in his fourth annual address.

"The want of small coins was keenly felt, and the first President was so evidently at one with the popular feeling in the matter that a legend is extant that these small pieces were coined out of his silver plate. But in what mint they were coined is a question that has been asked, but not answered. Some persons believe that they were coined in England, but patriotism repels such a thought. Nor is it necessary to frame such a conjecture, because there were two localities in the land where ample preparations had been made for coining silver, but had been arrested by the formation of the Federal Union, which took from the States the right of coinage. The two points where the 'dimes' and half-dimes could have been coined were Annapolis, in Maryland, and Dedham, in Massachusetts. The work was in all probability done at the latter place, for there has always been a strong local tradition that the first coins of the Union were struck there. The dime of 1792, or Washington dime, as collectors call it, has on the obverse a young man's head, with flowing hair, facing to the left. The date 1792 touches the lower part of the bust. Around is the legend: 'Liberty, Parent of Science and Industry.' On the reverse is a small eagle flying to the left, with the legend, 'United States of America.' Beneath the eagle is the word 'Disme.' The first regular issue from the Philadelphia Mint of dimes was in 1796, whereas dollars, and half-dollars, and half-dimes were coined in 1794. In 1794 and the succeeding year, the head of Liberty on the coins has the hair flowing without any restraint, but in 1796, when the quarters and dimes begin, this had been changed, and all the coins have the hair confined with a fillet. This lasted until 1807, when in the lat-

ter part of the year was issued the head of Liberty with the Liberty cap. This is considered, with reason, the most beautiful of American coins, and continued without change down to 1837 for dimes, and to 1838 for quarters, and to 1839 for half-dollars and 1836-40 for dollars, when the beautiful head of Liberty was displaced for a figure of Liberty seated. The dollars struck in 1836 and succeeding years until 1840 were tentative efforts only, the first large issue being in 1840. You can readily understand that it is very easy to recognize a dime or half-dime with the head of Liberty among others; the reverse bears an eagle with a heraldic shield. This has been retained for the larger silver pieces, but the small coins have a reverse which is simply insipid. Dimes as far back as 1814 are in circulation, but they seldom rank above good. Dimes of 1822 are very rare, and one in good condition is worth \$3. For the fine specimens the value mounts much higher, but it is injudicious to think of the auction-value of a piece as tending to a pot-hunting spirit greatly to be reprobated."—*Exchange*.

LUSTRA PAINTING.

This art having now passed through the test of public approval, may be said to have taken its place among the permanent pursuits of the tasteful. It is like nothing whatever that has preceded it, but it has been said, among other things, to remind one somewhat of old Spanish decorated leather, of ancient illuminated manuscripts, of cloisonne enamel, of Gubbio ware, and generally of monkish work and the work of ladies of the mediæval period. It has, moreover, been applied to modern design, to which it gives a peculiar character, refining and at the time imparting to it a tinge of quaintness.

The operation is simple. A design having been chosen, it is transferred by one of the usual methods to any fabric—furniture, velvet, satin, linen or cloth. This, as the operator chooses, may or may not have an outline of needlework. The paints are dry powders with a metal basis, which gives the finished work, when viewed in different positions, as decoration always must be, the reflections and varied play of light which metallic surfaces always lend themselves to. There is no one of these colors of precisely the same tone as any artist's color; they have a character distinctly their own and include a very considerable range—greens, blues, reds, browns, golds, purples, silver, yellows, lilac. A little of the color is tipped out into a well-shaped china palette, a little of the prepared liquid medium is added, a stir is given with the brush, and it is ready to lay on.

How it looks when it is laid on depends, of course, greatly on the taste, feeling and discrimination of the painter; the greater the knowledge and skill, the higher the nature of the result in most cases. "In most cases," because this art lays claim, and does so genuinely, to what no other art ever professed to—namely, that the wholly instructed can, merely by the use of their own natural senses, produce results which are not only highly respectable, but will very often successfully compete with the work of a skilled painter.

There is scarcely any kind of internal decoration for which this work is not adapted. Wall-hangings, curtains, mantel-borders, screens, can be enriched and intensified in effect, when the simple material would fall flat.—*Decorator*.

The secrets of life are not shown except to sympathy and likeness.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

LE PAGE'S MUCILAGE And Family Glue.

MANUFACTURED
ONLY BY

RUSSIA CEMENT CO.

Gloucester, Mass.

LE PAGE'S Process Preserves without Injuring the ADHESIVE Properties of the Glue.

Will not injure the most delicate colors.

CAUTION.—Beware of imitations claiming to be "the same thing" or "just as good."

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled. Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NOVELTIES IN CHARMS.

Many new designs in charms have been produced by Leroy W. Fairchild, 18 John street, New York. In a late notice of Mr. Fairchild's new catalogue a misprint occurred, making the word "charms" read "chains." It will, of course, be understood that he does not make chains. The cut illustrates the "Pug" charm, known as No. 170 in the catalogue.

No. 170.

MENU HOLDER.

Herewith is given an illustration of a combined napkin-ring and menu holder, intended to provide a support upon which the menu can be placed, so that persons while dining can have it in a convenient position before them, instead of having to take it up at each course. A represents a napkin-ring of any desired shape or design that may be preferred, and B is the menu holder, preferably made in the shape of an easel. These two parts are secured together so as to form practically one, and the napkin-ring will then come between the lower ends of the easel and its support D, or form part of support. An easel is shown, as it is preferable; but a great many other forms and figures may be substituted for it at will. The menu, being placed upon the easel, will be held in a convenient position in front of the diner, so that it can be ready without the person having to stop eating to pick it up.

Attached either to the ring or to the rear support of the easel is a vase or flower holder, O, of any desired shape, size, or ornamentation that may be preferred, and which forms a part of the easel. This bouquet holder may be made removable from the other two parts while they are being cleaned. The three parts together, with the flower vase projecting above the easel, make a beautiful table ornament.

If desired, the ring may be dispensed with, and the easel and the flower vase used alone.

NEW PATENTS.

No. 283,965. Banker's Case, Note-Book, &c.—John Casey, Philadelphia, Pa.

1. An extensible case or book formed of pockets, an extended flap, a hasp or catch, and a many-slotted face-plate and fastening-slide. 2. An improved extensible case or book formed of pockets, arranged in groups, and a folded bottom piece, which is continued from group to group, being of inverted V form between the groups, and right-lined and flat at the bottoms thereof. 3. An extensible case or book having a hasp, a many-slotted face-plate and fastening-slide, a locking-bolt attached to said slide, a key-post secured to said slide and projecting into the key-hole of the face-plate, and an engaging lug or keeper on the face-plate.

No. 283,980. Combined Book-Clamp and Portfolio.—John Wesley Eastwood, Denver, Col.

No. 283,997. Stereoscope.—Charles A. Gartner, Jersey City, N. J.

No. 284,045. Joint for Dividers and Calipers.—Charles Morrill, New York, N. Y.

No. 284,105. Device for Holding and Cutting Paper.—Wm. C. Westerfield, Chicago, Ill., assignor to J. H. Earl and Edwin F. Earl, both of same place.

No. 284,131. Combination of Drawing Tablet and Instrument Case.—Wellington P. Kidder, Malden, Mass.

No. 383,890. Paper-Bag Machine.—Henry A. House, Bridgeport, Conn., assignor to the Union Paper Bag Company, Philadelphia, Pa.

No. 284,223. Book Support.—Barton Pickering, Dayton, Ohio.

No. 284,236. Machine for Gumming Paper.—John L. Rile, Brooklyn, assignor to Asa L. Shipman, New York, N. Y.

MENU HOLDER.

No. 284,243. Hand-Stamp.—Louis K. Scotford, New York, N. Y.

A self-inking hand-stamp, with a pivoted die-plate, having a downwardly projecting arm passing through a guide pivoted to a plate pivoted to one of the end standards of the frame, and provided with a symmetrically curved longitudinal slot.

No. 284,251. Combined Easel, Blackboard and Writing Desk.—Robert Smillie, Springfield, Ill.

In combination with an easel, a board having a blackboard surface on one side and a finished or covered surface on the other side, said board being hinged to the easel and adapted to turn up against the same to expose the blackboard surface, or to turn down away therefrom to expose the finished or covered face at will.

No. 284,270. Calendar.—J. Brenner, New York, N. Y.

No. 284,272. Portfolio.—Justus Newton Brown, Watonna, Minn.

No. 284,318. Fountain Pen.—Jas. Buchanan Mitchell, Los Angeles, Cal.

A valve for a fountain pen, consisting of the combination, with a hollow holder having a partition near its lower end, and its tubular wall apertured near said end, of an elastic tubular cover which covers the apertured part, and is adapted to be compressed to open the aperture or apertures and form a passage for the ink.

No. 284,326. Slate-Pencil Sharpener.—Geo. C. Price and Geo. W. F. Cook, San Francisco, Cal., assign-

ors of one-third to Wallace C. Price, same place.

A slate-frame having dust-chamber, cutters and slide provided with openings.

No. 284,334. Device for Fastening Drawing Paper to Drawing Boards.—Wm. Schonheyder, Shepherds Bush, London, England.

No. 284,364. Frame for Purses.—Cornelius Beard and Chas. E. Baldwin, New York, N. Y.

No. 284,370. Paper-File.—James Brady, Brooklyn, N. Y.

No. 284,399. Printing-Plate.—John F. Earhart, Columbus, Ohio.

A printing-plate or roller made of hard or elastic material, and provided with unorganized and irregular depressions or seams formed in and extending below the surface of the plate and for the purpose of printing on various substances unorganized and irregular masses of colors.

No. 284,404. Automatic Book-Mark.—Edwd. H. Foote, Somerville, Mass.

No. 284,460. Cloth-Steeper for Copying Presses.—Jas. D. McIntosh, Milwaukee, Wis.

No. 284,470. Adjustable Book-Lock.—Mortimer C. Ogden, Brooklyn, N. Y., assignor to the Eagle Lock Company, Terryville, Conn.

No. 284,483. Envelope Machine.—Francis H. Richards, Springfield, Mass.

No. 284,525. Puzzle.—Richard H. Williams and John T. Williams, Mount Vernon, N. Y.

A puzzle consisting of a series of oblong colored tablets, no two of which are colored alike, forming squares, uniform in color when properly laid together, provided with arbitrary signs, each color being represented by a different sign.

No. 284,534. File Holder or Temporary Binder.—John S. Blankman, Denver, Col.

No. 284,537. Slate Cleaner.—Orsamus Bushnell, Brooklyn, N. Y., assignor to himself and Frank Overbury, same place.

No. 284,569. Stylographic Pen.—Edward B. Nimmo, Brooklyn, N. Y.

In a stylographic pen, an elastic slit disk covering the outlet of the ink-reservoir, in combination with an agitator connected with the vibrating needle, bearing at one end against the elastic disk, and resting at the opposite end on a seat or stop in the pen-point or case, whereby the inward movement of the needle and connected agitator distends or stretches said disk, while the elastic reaction of the disk throws out the agitator and its attached needle, thereby maintaining the vibratory motion of the needle and inducing the outfeed of the ink at the same time.

No. 284,570. Type-Writing Machine.—Henry Orpen, St. Louis, Mo.

No. 284,573. Pattern Tracer.—Louise J. Purdy, St. Louis, Mo.

No. 284,576. Calculating Device.—Charles Rowland, Quincy, Ill.

To add or multiply the columns on each side of a space are used. To subtract or divide the two columns to the left of a space are used. In the first case the results are in the column to the right of the handle. In the second case the handle shows the results.

No. 284,599. Paper Box Machinery.—Chas. E. Bolton and Matthew Rankin, Cleveland, Ohio

No. 284,607. Mechanism for Shifting the Angle Rollers of Printing Presses.—Andrew Campbell, Brooklyn, assignor to John and Edward McLoughlin, New York, N. Y.

TRADE-MARKS.

"The very best journal of its class that finds its way to our table."—*James D. Whitmore & Co. (N.Y.)*.

Advertisers will see that it is better for them pay fair charges to a Journal which covers the whole of the commercial world, than to pay less sums for advertisements in journals whose circulation is limited to one country, one town, or possibly one parish.

UNIVERSAL CIRCULATION.

Address, **W. JOHN STONHILL,**
IMPERIAL BUILDINGS, LUDGATE CIRCUS,
LONDON, E. C., ENGLAND.

"GRAPH" PROCESS WITH PRINTER'S INK.

Make the ordinary pad with glue and glycerine, only using a larger proportion of gelatine. For ink take a concentrated solution of alum colored with any aniline dye to render the marks visible, and execute the drawing or writing on good stiff paper. Then wipe the pad with a damp sponge, and allow the moisture to remain a few minutes to make the surface sufficiently absorbent. Now place the paper, face down, on the pad. After a few minutes remove the paper, and the writing or drawing is transferred to the pad, ready for printing. This is done by applying printing ink to the surface by means of an india-rubber roller, the ink adhering only to the lines made by the alum solution. To take the impression place upon the pad a sheet of paper, slightly dampened, and gently rub it with the fingers. Remove the paper which is now printed, ink the pad again, and keep on in the same way, as long as the impression is sharp enough. A large number of copies may thus be taken, of a good black, and as permanent as ordinary printing.

The common method of copying drawings by contact with the blue process or sensitive silver paper which requires an exposure of from ten to fifteen minutes to half an hour, seems likely to be superseded to some extent by the introduction of improved gelatine bromide of silver paper. At first the gelatine paper was difficult to prepare, and the results were not good as a rule. Now, however, they are turned out uniformly coated and in large sheets.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

J. E. Bear, publisher, Walnut Ridge, Ark., has sold out.

John S. E. Rogers, stationer, &c., Gloucester, Mass., is dead.

Lewis Griffiths, dealer in picture frames, Pottsville, Pa., is dead.

H. Sakolski, dealer in Hebrew books, New York city, died a few days ago.

Charles Gailey, dealer in stationery, toys, &c., Philadelphia, Pa., died recently.

Reckless & Kennedy, paper manufacturers, Council Bluffs, Ia., have suspended.

H. L. Beach, formerly dealer in toys and fancy goods, Bristol, Conn., is dead.

W. J. Means, publisher of the *Call*, Hartford, Kan., has sold out to Bixler & Lamphear.

The firm of E. A. Walton & Co., dealers in pictures, Holyoke, Mass., has admitted to membership D. P. Jewett.

Nelson & Kaup, printers, &c., St. Louis, Mo., have dissolved partnership. A. F. Nelson continues the business.

George H. Aldrich, dealer in stereoscopic views, Littleton, N. H., has sold out to the Littleton View Company.

A dissolution has taken place in the firm of Mix & Ayres, publishers, Penn Yan, N. Y. S. B. Ayres & Son succeed.

The *Grip* Printing & Publishing Company, (Incorporated), Toronto, Ont., has been partly burned out. Fully insured.

Sibell & Hyer shipped five cases of envelopes, stationery and cards to Panama last week. This firm is pushing its trade.

A company has been incorporated at Hannibal, Mo., under the style of the Standard Printing Company, with a capital stock of \$6,000.

Wells & Powell, printers and publishers, Moose Jaw, Man., have dissolved partnership. The business will be continued by J. E. Wells.

Robin Damon, publisher of the *Salem Evening News*, Salem, Mass., has been convicted of criminal libel for his attacks on City Marshal Hart.

The Danville Printing Company, Danville, Mo., has been incorporated with a capital stock of \$20,000. The incorporators are J. G. English, P. C. Bronkhite and F. E. Bowman.

The Harbor Springs Toothpick Company, Harbor Springs, Mich., will build a factory 124 by 30 feet in size, two stories high, which will have a capacity of 20,000 cords of wood per annum.

John B. Ferguson, who had retired from the firm of Parsons & Ferguson, wholesale stationers, Winnipeg, Man., has again become a partner with S. R. Parsons, and the firm name of Parsons & Ferguson has been resumed.

The National Publishing Company, Philadelphia, has issued many very elegant new designs for its quarto Bibles, which are having a large sale. One of them, an elegant cushion beveled board, embossed with an imitation of a hinge, is both novel and striking, and is said to be the handsomest quarto Bible design ever produced.

Chatterbox Junior has won a popularity among our children quite equal to that attained by the English *Chatterbox* in its days of greatest success. The new volume for the coming holiday season will be issued on November 5 by R. Worthington. Each page has a picture and each picture tells its own interesting story so plainly that no bright boy or girl can miss it. The reading matter embraces stories, sketches and rhymes in great variety, prepared expressly to accompany the pictures. The book is elegantly printed on fine paper, and the cover, resplendent with red and silver and gold, will be very prominent among the collection of holiday books.

Owing to the rapidly increasing trade in its productions, the Globe File Company, hereafter, will have increased facilities for supplying jobbers and others direct from its New York branch. C. M. Ward, the New York agent, speaks very flatteringly of the increasing demand for "Globe Letter File Cabinets," which have recently been greatly improved by a new patented arrangement whereby all of the drawers in the cabinet are unlocked and locked by one turn of the key. This, together with their durability, beauty and finish, has made them general favorites.

Abraham Wallach, of the firm of A. & E. Wallach, importers of notions and fancy goods dealers, 452 Broadway, New York, made an individual assignment on Tuesday to Frederick Lewis. The firm assigned about a month ago, and the individual assignment is to cover some real estate not included in the general assignment.

The Berlin & Jones Envelope Company keeps in stock "Arnold's" ready cut election stickers; also gummed folio pressed and trimmed for labels, and every variety of envelopes, flat and ruled writings, note, letter, statement and bill-heads at low prices.

Herman Heim, dealer in tags, labels and fancy cards at 309 Broadway, New York, made an assignment Saturday to James T. McMahon, giving preferences for \$723. He has been in this line of business about six years, and he owes only a few thousand dollars.

Henry Levy & Son have determined to close out the remainder of their holiday fancy goods, and with this view they have greatly reduced prices, offering decided bargains. Buyers will find it to their interest to give them an early call.

The American Baptist Mission Press, No. 1 Thirty-fifth street, Rangoon, Burmah, forwards its September price-list of publications in English and in Burmese and other East Indian dialects.

The style of the firm of Marcus Ward & Co., art publishers, &c., London, Belfast and New York, has been changed to Marcus Ward & Co., Limited.

William F. Knott, publisher of the *Frankfort Gazette*, Philadelphia, Pa., has sold out to James France and gone to Vineland, N. J.

O. T. Dodge, dealer in picture-frames, &c., Montpelier, Vt., is advertising to close out his business.

Osborne & Cleveland, publishers of the *Free Press*, Bodie, Cal., have dissolved partnership. The business will be continued by H. Z. Osborne.

Jewitt & Chapman have bought out the business of S. H. Davis, stationer, &c., Lorain, Ohio.

An assignment in trust has been made by W. R. Burrage, publisher, &c., Toronto, Ont.

John E. Goodwin, printer, Baltimore, Md., is dead.

Ed. Martin, bookseller and stationer, Watsonville, Cal., has sold out.

Horace G. Hewes, dealer in artists' materials, Portland, Ore., has failed.

John R. Blair, publisher of the *Post*, Norwich, N. Y., has made an assignment.

The mortgage held against J. C. Morgan, publisher, Council Bluffs, Ia., has been foreclosed.

George R. Pfeiffer has bought out the business of T. D. Woodruff, bookseller, &c., Quincy, Ill.

Seth F. Dawson, manufacturer of leather-board, Lawrence, Mass., has been attached for \$1,000.

W. H. Burk, publisher of the *Commercial Advertiser*, Detroit, Mich., has petitioned for a receiver.

Edward S. Hathaway & Co., publishers of the *Times*, Hyde Park, Mass., have sold out to Hunt & Chamberlain.

The store of F. D. Polk & Brother, dealers in books and stationery, Baltimore, Md., has been damaged by fire. Partly insured.

Davis & Geary, proprietors of the Detroit Rubber Stamp Company, Detroit, Mich., have dissolved partnership. W. S. Davis continues.

I. A. Isaacs, dealer in printers' materials, New York City, has sold out pending two judgments against him, one in the sum of \$640 and another amounting to \$180.

E. B. Green, lately head of the stationery department of A. S. Barnes & Co., has gone into partnership with Heyward C. Broun, stationer, 40 Beaver street, and the style of the new firm is Broun & Green.

The trustee of Oliver W. Clay and Wm. H. Curry, members of the firm of Curry, Clay & Co., Baltimore, Md., has given notice that all persons having claims against the parties individually or as members of the firm, may file said claims in the Circuit Court of Baltimore.

The first number of the second volume of *Building* has been received. It is a special, illustrated number of this enterprising architectural publication, and in addition to its generally interesting matter contains sixteen plates giving nineteen selections of designs of public and private buildings, interior, decoration &c., with descriptions. It is a very attractive paper.

The envelope-folding machines manufactured by the Berlin & Jones Envelope Company, are meeting with large sales. The firm is six months behind its orders. Many of the machines are being exported. These machines, with the recent patented improvements made to them, do the entire work of manufacturing an envelope, with the exception of cutting the blanks, that is to say, it gums, seals the flap and folds the envelope at the rate of 80 per minute or 48,000 in ten hours.

What an idea! The Berlin & Jones Envelope Company thinks that Horace Greeley's advice to "go West" can be paraphrased for the benefit of the trade to "go buy papeteries," of which this house has a wide and varied line at all prices, from next to nothing to a Vanderbilt valuation. Besides these papeteries in velvet, plush, satin, silk or paper, and beautiful in form, excellent in quality and appropriately cheap, the Berlin & Jones Envelope Company offers an assortment of brush and comb cases, odor cases, glove, handkerchief, collar, cuff and jewel boxes, whisk-broom holders, plush-framed mirrors, writing desks, card-holders, clocks, &c., in

divers forms of utility and beauty and at low figures.

A. B. Allen, publisher of the *Fairfield Journal*, Fairfield, Me., has sold out.

Robert Davie, dealer in toys, &c., Columbus, Ohio, is closing out his business.

Ph. Hake has some steam stamping-presses, which he will let the trade use on conditions advertised in another column.

The November number of "Our Little Ones" (Russell Publishing Company, Boston) is received. It is a very attractive and interesting number, both in illustration and reading matter.

George S. Lester, dealer in jewelry and stationery at New Haven, has been attached by the sheriff for \$1,500. His liabilities are reported at \$20,000, of which \$5,000 is for merchandise and the balance for borrowed money and for some old matters which it now appears were never really settled. The amount of the attachment is about the value of the stock.

The following-named out-of-town dealers have been in town during the past week: Mr. Stuart, of the firm of Skeen & Stuart, Chicago, Ill.; Peter O'Donnell, New Orleans, La.; W. W. Riley, Portsmouth, Ohio; Mr. Phelps, of Morton, Phelps & Bulwer, Montreal, Que.; Mr. Schooner, Leavenworth, Kan.; Mr. Graham, St. Louis, Mo.; G. A. Whittaker, Washington, D. C.

J. E. Linde, 165 William street, has added several new designs of a taking character to his line of "shape novelties." Among these may be specially mentioned the following numbers: 265, "Watering-Can;" 266, "Camel;" 267, "Rooster;" 268, "Satchel;" 270, "Tally Ho;" 272, "Squirrel;" 273, "Casket," and 274, "Bandbox." The "Tally-Ho" is a large-size representation of a "drag," or old-time coach, with its load of gay passengers; the "Casket" is in bright, but delicate coloring, and is arranged so that a pretty girl's head peeps up from it and is withdrawn by the action of a rubber strap; the "Bandbox" is a like fancy, only that it conceals a "dude." The goods are very salable.

The postal money order business for the fiscal year ended June 30, 1883, exhibits a total of all kinds issued during the year of 9,273,882, of an aggregate value of \$125,047,238. The increase in the value of the domestic orders issued over those issued during the preceding fiscal year was \$3,955,980, or 3.46 per cent.

WANTED—BY A NEW ORLEANS, LA., Stationery Firm, a wide-awake man who thoroughly understands his business. Must be able to estimate and take orders for Printing, Blank Books, &c., and willing to travel about seven months in the year. To the right party liberal terms and a permanent position will be offered. Apply with references to "COMMERCIAL," Office of American Stationer.

FOR SALE—BOOK AND STATIONERY STORE in the wide-awake city of Holyoke, Mass. Address, JAMES D. GILL, Springfield, Mass.

INVISIBLE INK FOR POSTAL CARDS.

Correspondents of the *Druggists' Circular* give the following recipes for a sympathetic postal-card ink :

1. Diluted sulphuric acid, one part by measure of acid to seven of water. When this ink is used the card will at first show roughened traces of the writing, but after being allowed to dry for a short time these disappear, and it is as invisible as if done with water. Of course, only a gold pen or a quill must be used. If it is desired to avoid the suspicion of using sympathetic ink, which might be excited by a blank postal-card, it may be written upon, across the first writing, with tincture of iodine, which will entirely fade out when the heat is applied to develop the invisible ink.

2. Use a solution of sulphate of iron, and develop with a solution of prussiate of potash.

3. Take a solution of ferrocyanide of potassium (1 in 50); after writing with this solution, the letters and writing are visible to the naked eye; but if a damp sponge be passed over the writing, after it is dry, then it will be absolutely invisible. The ink may be developed in several ways. With sulphate of iron the writing will appear blue, and with sulphate of copper dark brown; the writing with ordinary ink, which it is advisable not to omit, remaining unaltered. By exposure to the fumes of muriatic acid or by dipping into the same acid or nitric acid, slightly diluted, the invisible writing will be developed of a bluish-green color, while the ordinary writing with nutgall ink will disappear.

PHOTOGRAPHS ON GLASS.

The exceedingly delicate-colored photographs on glass which have come into fashion somewhat of late, are produced by fixing a paper-photograph upon a cushion-shaped glass with transparent cement, and when it is dry rubbing away two-thirds of the thickness of the photograph with sand-paper. The thin film left is then rendered transparent by soaking in melted paraffine wax, after which transparent colors are applied, which appear softened down when looked at from the front. The background and heavier portions of the picture are then painted in body-color upon the face of another cushion-shaped piece of glass, which is afterward fixed behind the first one. An improvement in this process has just been made by Mrs. Nelson Decker, daughter of the late C. F. Varley, F.R.S., and the first of the young members of his family to have produced a scientific novelty. She has just discovered that the second sheet of glass may be abolished, a better artistic effect produced, and the picture rendered more permanent by being protected from the action of the air and deleterious gases by being wholly imbedded in paraffine. She does this by quickly dipping the photograph in paraffine a second time after the transparent colors have been applied, and painting the heavier colors upon the back of this second coat. A third layer of paraffine is then applied, and the background painted upon that; this third coat may be finally protected by yet another layer of paraffine. Some practice is necessary to acquire the "knack" of doing this efficiently. It must be done quickly enough not to remelt previous layers, and the plate must after each dipping be quickly tilted on end in such a manner that the paraffine does not run into ridges and thickened lines, but forms an even coating.—*The Engineer.*

Bad men excuse their faults, good men will leave them.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.
WEEKLY---\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 1, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

To those who are so constantly talking about the conflict of labor and capital and inveighing against the domination of the latter, some recent figures of the London *Times*, presumably correctly founded, will be a surprise. In speaking of the "remuneration of labor" the *Times* says, that "assuming the produce of labor to be 100, in Great Britain 56 parts go to the laborer, 21 to capital and 23 to the government. In France 41 parts go to labor, 36 to capital and 23 to government. In the United States 72 parts go to labor, 23 to capital and 5 to government." Without considering other suggestions which this statement might evoke, we think that it is enough for present purposes to say that the agitation which some people are constantly exciting against capital and the inordinate cost of government in this country is of a penny-whistle character: a noisy sound without anything to commend it; a voice and only a voice with nothing of argument to sustain it—in fact, gas!

WHY don't American merchants study the Mexican trade and work it for all that it is worth. No doubt, some one will say that the commercial treaty still hangs fire and that we must await its ratification before we can enlarge our trading with the sister republic, but this argument will not do. We can sell goods to Mexico, as it is, and inasmuch as it is probable that the Treaty of Commerce will go into effect—perhaps before the coming year—it is full time that pains were taken to get into the methods of developing business under it. Germany has got somewhat the start of us. Taking alarm at our proposed commercial alliance, she made haste to engage in one with Mexico on her own account and has been so sharp about it that her treaty is now actually concluded. We hope that our government will not be slow to act and that the Senate will ratify our treaty as soon after it convenes in December, as may be practicable. A late number of the Mexican *Financier* speaks encouragingly of trade prospects in its country and makes suggestions which indicate a welcome to American houses which may seek to cultivate closer business relations. It says: "It is time for American firms proposing to do business with this country to begin studying the methods of trade here. The noisy 'drummer' system prevailing in the United States will not work here, and merchants will have to look out for representatives who can adapt themselves to the different conditions. There is one point which cannot be touched on too strongly, and that is, that American shippers must learn how to pack their goods in a more careful and less cumbersome way if they expect to do any business in these countries. Light, strong and compact packages are needed, and it is singular that Americans, with all their adaptability and mechanical skill, should allow themselves to be beaten in this point by their more conservative rivals." We hope that the advice thus freely given will be as freely taken,

and that proper systematic effort will be made to open, foster and extend such amicable relations as fair commercial intercourse is capable of creating.

ROUNDAABOUTS.

BY THE TRADE LOUNGER.

Somewhat curious news from Chicago this week. Of course you have heard all about it; but doesn't it strike you as being somewhat funny?

I don't mean to say anything derogatory to the Chicago firm which has so unexpectedly "sold out;" but it does seem to me to be rather a queer way of disposing of a business. The new proprietor, not to "the manner born" as a stationer, but a sprig from the legal tree, takes over a stock of goods and then wants to find out what he has bought. Humph!

The slight allusion to a "sprig" must not be construed in a personal sense. I didn't mean anything of the sort, 'deed I didn't; but we know that of old lawyers have been called "limbs of the devil," and somebody might think that I meant to so allege. Nothing of the kind!

What are you going to do about it? is the natural inquiry of the creditors who are unable to "get in out of the cold." Of course, I am not expected to answer that, but there is a chance for crossing accounts off from the books. We all know what "profit and loss" means. I should imagine that this is about all there is of it.

What have some of the paper-makers been about? There was a queer little paragraph in the *Tribune* this week about a young woman out West who, it was alleged, came to life just as she was about to be buried. This revival story is denied, but I would like to know of what possible interest it could be to a well-known paper maker had it been true.

So A. S. Barnes & Co. have lost the efficient head of their stationery department. Mr. Green has gone into partnership in a well-known house, and with his experience and aptitude for business we shall doubtless hear more of him as a successful merchant. I hope that he may prosper. I understand that Mr. Holmes has been promoted to Mr. Green's old position. From all that I know about Mr. Holmes, I believe that he merits the advance, and that "sound business principles," so much talked of in connection with civil service reform, have been well sustained in his case.

Would you believe it? That gentleman whom I have been seeking for several months has not yet been revealed in his actual presence to the eyes of the "Lounge." I shall begin to take it ill if I am to be debarred from an interview. I presume that you know whom I mean.

I have been much amused with some new things in "shape novelties." Samples shown me indicate a well defined and persistent effort to improve these goods in design as well as in execution and the result is some surprisingly pretty articles. For advertising purposes they are immense, and the way some grown people go for them is surprising. The children, of course, "cry for them," and now the album notion has struck in and some album enthusiasts are making up "shape albums." Well, everything has its day and people might do worse.

I see that the well-known firm hailing from Londou, Belfast and New York, has tacked on "limited" to its name. This is only in a "Pickwickian sense," so far as its products are affected. Its manufactures are practically unlimited, and we are assured of ever new and increasing fancies from its ateliers of art and industry.

ANSWERS TO CORRESPONDENTS.

J. L. wants to know where he can obtain the "small, half-size type" used for "amateur" printing.

Ans.—Kelsey & Co., Meriden, Conn.; Golding & Co., Boston, Mass., and Walker, Tutbill & Bresnan, 201 William street, New York, can supply you.

T. B. wants to know where to get blotter attachment for notes, &c., mentioned in last issue of THE STATIONER.

Ans.—W. H. Hasbrouck, New York.

Subscriber asks: Who makes Higgins' American drawing ink?

Ans.—C. M. Higgins, Brooklyn, N. Y. His New York address is Temple Court.

A NEW FEATURE IN BLOTTING.

In a circular to the trade, dated to-day, the manufacturers of "Treasury" and "Commercial" blotting state that they have increased their discounts on blotting-paper and they now quote "Treasury" at 21 cents and "Commercial" 16 cents, less 10 per cent. and an additional 5 per cent. for two ton lots or over. The terms are: For all sums over \$100, note at three months, or 2 per cent. for cash. They also state—and this point will be appreciated by the trade—that "Treasury" is put up by numbers, thus: #60, #80, #100 and #120, and scales respectively 54, 72, 90 and 108 pounds to the ream. It is not stated that the weight marks above noted are to be stenciled on the packages, as are those of the Commercial and the 140-lb. "Treasury." Why not?

OBITUARY.

F. O. J. S. BAZIN.

F. O. J. S. Bazin died at his residence, No. 19 Union Park, Boston, on the 21st inst., after a long and painful illness. Mr. Bazin was born in Boston, December, 1830, and was the son of George W. Bazin, for many years a well-known printer on Cornhill. At an early age he entered the book publishing house of B. B. Muzzey & Co., of which firm his brother, Thomas H., was the junior partner. He was afterward of the firm of Brown, Bazin & Co., and later had charge of the publishing department of the well-known house of Phillips, Sampson & Co., the first publishers of the *Atlantic Monthly*. He passed a few years in the same business in Philadelphia, and on returning to Boston became connected with the firm of Ticknor & Fields. For a number of years he had been connected with the firm of E. Flemming & Co., bookbinders, on Franklin street, and by his energy, promptness, and fair dealing contributed largely to that firm's successful business. For nearly forty years, as boy and man, he has been actively engaged in the book and publishing business, and few men in the country were better known or more respected in it. He leaves a widow.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, October 31, 1883. }

THE MONEY MARKET.—The ruling rates for call loans are 2@4 per cent., and the rates for discount vary from 5 to 7 per cent. for strictly prime mercantile notes and acceptances, and from that up

to 15 per cent for second and third rate and single name paper. There has been much less excitement in stocks than last week, but though the dealings have been comparatively light, the tone of the market has been in the main firm. Government bonds are steady. Railway mortgages, with few exceptions, have further advanced. There has been a small advance in sixty days commercial sterling bills, which are scarce and in demand, while bankers' bills, both long and short are lower. Continental exchange remains as before.

THE PAPER MARKET.—The volume of business in the paper trade keeps up to about recent proportions, and the general situation remains substantially as a week ago. We have passed the most active part of the autumn season, yet such has been the caution displayed by buyers all through the year that stocks of goods held by distributors are believed to be small, or very little beyond the current needs of consumers, and their replenishment will be likely to insure a moderately good business to the end of the season. The feature of most interest this week is in the manilla wrapping trade, in which several of the largest manufacturers of No. 1 manillas have advanced their prices $\frac{1}{2}$ c., the common grades, such as bag paper, does not share in this advance. The mills generally being full on orders and the sharp advance in jute butts are the causes for this appreciation. Printpapers are unchanged, and the same can be said of straw wrappings and boards.

THE STATIONERY MARKET.—The general condition of business is hardly as active as a few weeks ago, the numerous business failures in the South and West having had rather a dampening effect on trade bearing directly on those sections. To be sure, few of these failures were in the stationery line, but they have tended toward a weakening of confidence among tradesmen, who are taking more than the usual precaution, when filling large orders on time, to secure themselves against loss. The trade in fine stationery is very fair, particularly with the near-by trade. There is no variation in the market for art novelties, plush goods, &c., which are meeting with a steady demand. The trade in pens and inks is quite fair, but not particularly active. Stylographic pens are meeting with a rather better demand than a few weeks ago. The envelope business is about the same as usual; dealers are buying just what they need for the present, orders being for small quantities only. Prices remain unchanged. Dealers in blank-books report a falling off in orders during the past week, and trade in this line has been rather dull.

CINCINNATI TRADE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, October 30, 1883.

The local excitement here just now is over an effort by H. W. Derby to supplant Van Antwerp, Bragg & Co.'s books in the public schools by Harpers' publications. It is a gigantic undertaking. This firm has held the field not only in Cincinnati but in almost the entire West for many, many years, and few houses have shown more enterprise and expended more to keep the quality of school-books abreast with the age than the house of Van Antwerp, Bragg & Co. The illustrations in its readers, and in fact in its whole line of books, are simply marvels of skill in the matter of illustrations. Its whole line of books has been so frequently subjected to severe and patient revision as to excite criticism from the captious that they were too often necessitating the purchase of new books in families, whereas but for this reason the old books might pass from the older to the younger children. Had the firm shirked the revision it would have been criticised for not keeping up with the times. So it has been a sort of scylla and charybdis business with it, all the while involving unfavorable criticism on the one hand, and large outlays of money on the other. Now the claim of superiority made by the competition is that he offers a series twenty-five per cent. cheaper than that in use. The Committee on Text Books in the Board of Education, is toying with this matter without reaching a conclusion or giving the public any sort of idea which way the cat is going to jump. This dilatory way of proceeding is in some cities in these United States an indication of a motive not at all complimentary to the Board which practises such methods. I have no reason for impugning the motives of the Cincinnati Board of Education, but I make bold to say that this puttering, faltering, hesitating indecision is the method which in other cities bad boards of education have employed when there was corruption in the air. As to the relative merits of the two series of books I know nothing. As a rule, the boards of education are responsible for making books a costly thing in a child's education in that they are prone to crowd the curriculum with studies. The school-book war, as you see, after a long truce, seems likely to break out again, and the opening skirmish is on now and here in Cincinnati.

In the paper trade wrapping papers are high and prices are stiff, but news paper is only medium—not so low down as it has been, and not so good but that it might be better.

Christmas cards and every description of holiday cards are finding a good sale in the country. Some jobbers in these lines here have found it necessary to duplicate their orders.

The monotonous autumn weather, a prolongation of September, has operated against general trade. A spell of rigorous winter weather would help out amazingly. The winter pork packing season comes on with the first of November, and that always makes times brisk. Nobody seems discouraged, and there is no apparent ground for discouragement, in spite of daily news of failures over the country.

The Ohio teachers have founded a reading club after the Chautauqua plan with Mrs. Professor Williams, of Delaware, at the head of it, and this is making a demand for first-class books.

Robert Clarke & Co. have printed a little volume by S. S. Bassler, of the *Commercial Gazette*, entitled "The weather, a practical guide to its changes." The same house has in press

"Sorghum," a book treating of all the title implies, by Peter Collier, Ph.D.

Trade visitors have not been numerous. Chicago, however, is relatively numerous. That windy city has been represented by J. J. Freeman, of the Sanford inks; William Montgomery, of the Livermore Stylographic Pen Company, and some one representing Culver, Page, Hoyne & Co., bringing coals to Newcastle, so to speak—coming right into the habitat and lair of the Globe Files Company. New York has been represented by John A. Ritter, for the Koch, Sons & Co. firm, including both horns of that dilemma. Henry E. Jones arrived in the interest of Woolworth & Graham, and found something to do. John H. Brunnings, of the New York Blank-Book Company, 29 and 31 Beekman street, came somewhat but not exactly as one bringing coals to Newcastle, and this he proved by the business he did. Edwin A. Bush was here from Philadelphia, and so was P. T. Bayes. Mr. Bush came in the interest of inks, wax-paste, etcetera, for the Continental Manufacturing Co. He found Cincinnati had been pretty well inked, waxed-pasted, etcetera, and before he arrived, but he brought something different and took orders all the same. Mr. Bayes was here in the interest of J. G. Ditman & Co., with paper and envelopes. He found the coast pretty clear for envelopes and improved his opportunity, though buyers were fastidious, both on terms and quality. PRINCE WILLIAM.

COLORINGS.

When we mix blue and red to form violet, the result will be better if we take a red *tinged with blue*, and a blue *tinged with red*, than if the red and blue incline to yellow.

Black is generally given upon a previous coat of lead color in which the proportion of white lead it contains may, in a measure, be considered to counteract the deterioration of the wood-work caused by the peculiar properties of the finishing color.

In cases where a black front is required the paint should be prepared without the use of oil—boiled oil-color is unsatisfactory in its working, and linseed (raw) oil must on no account be mixed with it, or the color will probably never dry on the work, even if the patent dryer be added. Black is one of the slowest colors to dry of any pigment known to the decorator, and one of the most uncertain when used on exterior work in a humid atmosphere.

Frames of yellow wood or of a color called *bois*, accord very well with lithographic landscapes; it is possible to greatly modify the appearance of the design by mounting it on tinted paper when we do not desire the effect of a white margin.

Harmony results from an agreeable contrast. Colors which perfectly harmonize improve one another to the utmost.

Red and green combine to yield a harmony. Red is a primary color, and green, which is a secondary color, consists of blue and yellow—the other two primary colors. Blue and orange also produce a harmony, and yellow and purple, for in each case the three primary colors are present.

The rarest harmonies frequently lie close on the verge of discord.

Harmony of color is, in many respects, analogous to harmony of musical sounds.

When a color is placed on a gold ground it should be outlined with a darker shade of its own color.

When a gold ornament falls on a colored ground, it should be outlined with black.

When an ornament falls on a ground which is in direct harmony with it, it must be outlined with a lighter tint of its own color. Thus, when a red ornament falls on a green ground, the ornament must be outlined with a lighter red.

When the ornament and the ground are in two tints of the same color, if the ornament is darker than the ground it will require outlining with a still darker tint of the same color, but if lighter than the ground no outline will be required.

Black, white, and gold being neutral, may be advantageously employed to separate colors, when separation is necessary or desirable.

This principle must not be passed without notice, namely, that the first color effects are those of a rich, mingled, bloomy character.

Primary colors (and secondary colors also when of great intensity) should be used chiefly in small masses, together with gold, white or black.

The works of the Japanese are not to be overlooked, for in certain branches of art they are inimitable, and as colorists they are almost perfect. On the commonest of their lacquer trays we generally have a bit of good coloring, and their colored pictures are sometimes marvels of harmony.

If a double border is required, for example, an interior border of flowers and an exterior border, the latter must be of a much deeper tone than the other, and must always be smaller.

When we choose hangings upon which to place a picture they must be uniform, and establish the greatest contrast possible between its color and that which predominates in the picture, if the hangings are not of normal gray.

Light green is favorable to pale complexions as well as to rosy, to mahogany furniture and to gilding.

Yellow is lively; it combines well with mahogany furniture, but not generally with gilding.

Orange is a color that can never be much employed, because it fatigues the eye too much by its great intensity.

Among simple colors there are really scarcely any which are advantageous, except yellow, and the light tones of green and blue.

Light blue is less favorable than green to rosy complexions, especially in daylight; it is particularly favorable to gilding, and it does not injure mahogany, and associates better than green with yellow or orange woods.

Gilt frames accord perfectly with black engravings and lithographs, when we take the precaution of having a certain extent of white paper round the subject.

Bronze frames, which have but little yellow brilliancy, do not injure the effect of an oil picture which represents a scene lighted by artificial light, such as that of candles, torches, a conflagration, &c.

To conclude, the rule to be followed in assorting a frame to a picture is, that its color, brightness and ornaments, also, shall injure neither the colors, nor the shadows, nor lights of the picture, nor the ornaments represented in it.

Gilt ornaments detach better from black than from white.

Yellow is more luminous, more brilliant upon a red than upon a white ground.

Green is more attractive upon a deep red ground than upon any other.

Gray patterns upon paper tinted of a light color exhibit the phenomena of maximum contrast; that is to say the gray appears colored with the complementary of the ground.—*Decorator*.

A CHICAGO COMPLICATION.

A Monday dispatch from Chicago says: Large, square brown pieces of heavy pasteboard were hung over the signs of Culver, Page, Hoyne & Co., printers, stationers and bookbinders, this morning, at their store, Nos. 118 and 120 Monroe street, on which were written in black marking ink the dismal words, "John Morris, successor." At Bradstreet's agency it was learned that the firm had been doing business on a capital of \$200,000, and that its standing had always been rated as "very good." About a year ago it was supposed that Culver, Page, Hoyne & Co. were crippled by a flurry in the paper trade. Their pay was characterized as "slow" at that time, but their creditors made no complaint, and they were rated by Bradstreet's as before. The capital of the firm had no doubt been seriously impaired at that time and since. The stockholders are H. Z. Culver, D. W. Page, M. A. Hoyne, C. W. McClure, W. T. Whitman, L. B. Burrell, and three or four persons who have a small interest. All, except Mr. Hoyne, were active in the business. He knew nothing of the sale or suspension, or whatever it may be, until told by a friend, and then he went to the store to see about it. No assignment was filed in the County Court, but judgment was confessed for a small amount and some of the company's paper went to protest, and these facts gave rise to the rumor that the house had failed.

Frank Smith, who is attorney for John Morris, said that a genuine sale had been made to Mr. Morris, who would commence business on Tuesday morning. Having bought the stock, he wanted to know what it consisted of, and hence the closing of the doors. Mr. Smith said he knew nothing about the affairs of the company, but that the sale was a square one. The company, it is understood, decided to close out on Saturday night. On Sunday there was a conference between Mr. Grannis, president of the Union National bank, and the active stockholders, at which Mr. Grannis secured the bank against loss. John Morris, who is an attorney, took possession and many believe that he is simply a representative of the Union National. Mr. Grannis declined to talk on the subject.

The firm began business in 1856, and was the oldest as well as the largest in its line in the city. The original members were H. Z. Culver and D. W. Page, who bought out a stationer named Stacy. Six months afterward M. A. Hoyne was taken in, and the name was changed to Culver, Page & Hoyne. In the summer of 1871 the house occupied quarters on the corner of Clark and Lake streets in the same building with C. W. McClure, who was conducting the Chicago Printing Company. The two joined and organized the Culver-Page-Hoyne Company, becoming a corporation under the State law. Having a leasehold of some property on Monroe street, between Clark and Dearborn, the company erected a store and moved in. Its establishment was burned in October, 1871. One business man spoken to said that he did not know how much of the firm's paper was outstanding, but he knew of several batches of \$20,000 each. The reporter's informant believed that the sale was simply to gain time, and that the company will come out all right, this course being taken to prevent a smash up. Mr. Morris, to whom the alleged sale was made, is the attorney of the firm. He is said to be a stockholder, or to represent the Southworth Paper Company, of Mittineaque, Mass. It is believed that that corporation and the Union National Bank of this city formed a combination to protect themselves. The capital stock is placed by those who know

at \$400,000. The stock and machinery are worth about \$225,000, and the building and leasehold \$100,000 more.

Telegraphic advices of Tuesday state that notices couched in the language of the usual commercial formula appeared in the morning papers, signed by the old firm and the new proprietor. That of Culver, Page, Hoyne & Co. announces that they have sold to John Morris the good-will, stock, merchandise, machinery, fixtures, and all assets, including bills receivable, open-book accounts, and other indebtedness due and becoming due, which was and is owing to Culver, Page, Hoyne & Co. by whomsoever, and that Mr. Morris is fully authorized to collect the same and give acquittance therefor.

M. A. Hoyne could not be seen, but Mrs. Hoyne told a reporter that he did not know why the property of Culver, Page, Hoyne & Co had been transferred to Mr. Morris. Mr. Hoyne knew that the firm was heavily in debt, but he first learned of the transfer of the property on going to the store yesterday morning. "Then," she said, "he had a most unsatisfactory interview with his partners, of which I know little." She added that she thought Page and Culver were trying to freeze out Mr. Hoyne, or to induce him to put more money into the business. Mr. Hoyne had not taken a cent from the business for years, and had only put money into it. Mr. Culver had taken it all, and had had full charge of all the money affairs. Mr. Hoyne had put about \$200,000, or a controlling interest, into the business, and she believed it was all gone.

It is impossible to obtain any authentic information as to the assets and liabilities of the concern, but those best able to judge say that the liabilities will approximate \$500,000, and the assets about \$800,000. This includes the leasehold, which is very valuable, and the building, which must form fully one-half the assets. Most of the assets are said to be in Charles Culver's hands. Mr. Culver's personal indebtedness, sanctioned by the firm, is included in the list of liabilities.

Mr. Morris is said to simply represent the Union National Bank of Chicago, whose claim is about \$50,000, and it is understood that he will control the sales only until the bank's claim is satisfied. The leasehold was transferred on Tuesday to John M. Southworth, representing the Southworth Paper Company, of East Springfield, Mass., for a nominal figure of \$90,000, although it is not believed that the paper company's claims amount to anything like that sum.

C. E. Culver, brother of the senior partner, also has large claims, but is believed to be secured. It is known that there are large numbers of creditors in the East, although what amount of paper is outstanding cannot be learned. It is believed that the majority of the Eastern creditors will be forced to compromise at very low percentages.

The foregoing is the statement as telegraphed from Chicago. The sale is regarded by the trade in New York as equivalent to an assignment and indicative of a failure. Many express surprise, but a few of the large dealers, with whom the firm has traded more or less for several years, have expected the collapse for a year or more. The firm was believed to have been pushing its trade to any extent not warranted by its capital, and had moreover, been selling at prices far below a profitable realization. Among the New York creditors are Henry Bainbridge & Co. for about \$3,000, Liebenroth, Von Auw & Co., about \$6,000, and other firms smaller amounts. The firm is said

to have been buying extensively from several houses in Boston and other sections east, but no definite extent of their liabilities either in New York or Boston has as yet been ascertained.

Yesterday John H. Southworth, president of the Hampshire Paper Company of South Hadley, Mass., and the Southworth Paper Company of Mittenague, Mass., claimed to be sole owner of the stationery and printing establishment of Culver, Page, Hoyne & Co. He said that he had bought it within the past five days, and had paid all that the property was worth for it. He added that Otis K. A. Hutchinson was acting for him. Mr. Morris, however, said that Mr. Southworth was mistaken; and that he, Morris, was the sole proprietor.

The Chicago representative of THE STATIONER called upon Mr. Pettibone, manager for the house of Culver, Page, Hoyne & Co., and was informed that the firm had nothing to say at present, but that, as representing Mr. Morris, he could state that that gentleman intended going on with the business as usual, and that there would be no closing out nor selling out. He did "not want to be impolite to THE STATIONER, but can give it nothing more at present." THE STATIONER reporter states that the affair is much commented on in Chicago, and directs

attention to the appended circular, which is thought to be suggestive, especially in the matter of dates:

JOHN MORRIS,
Successor to Culver, Page, Hoyne & Co.,
PAPER, BLANK BOOKS, STATIONERY,
Bookbinders' Stocks, Tools and
Machinery,
118 and 120 Monroe street.

CHICAGO, October 29, 1883.

DEAR SIR—You are hereby notified that we have this day sold to Mr. John Morris, the good-will, stock merchandise, machinery, fixtures, and all assets, including bills receivable, open-book accounts, and other indebtedness due and becoming due, which was and is owing to Culver, Page, Hoyne & Co., by whomsoever, and the said John Morris is fully authorized to collect the same and give acquittances therefor.

Thanking you for your patronage of the past, we bespeak for Mr. Morris, who will be assisted by the old heads of departments, a continuance of same.

Respectfully, CULVER, PAGE, HOYNE & CO.

CHICAGO, April 29, 1883.

DEAR SIR—Referring to the above announcement of Culver, Page, Hoyne & Co., you are thereby and herein notified and requested to remit the amount of your account to me at the maturity thereof, and oblige

JOHN MORRIS.

Another circular issued by Mr. Morris is dated October 28, or one day prior to the date of the notification of sale, and states that he has bought the good-will, stock, fixtures and machinery of Culver, Page, Hoyne & Co.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—Ex. U. S. Minister, E. B. Washburne.

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—New York State Engineer's Report for 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

NEW LIST AND DISCOUNTS OCTOBER 1, 1883.

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.

One-half the time and three-quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

SILICATE BOOK SLATES, ————— BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, ————— LAPILINUM—(Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

LUMINOUS PAINTS AND COLORS.

The luminous calcic sulphide (also-called sulphide of calcium), now obtainable in the market has a yellowish white tint, which considerably limits its direct application as a paint. On the other hand, the calcic sulphide, or the luminous paint obtained therefrom, loses its luminous property, if it is directly mixed with the ordinary commercial paints. An invention recently patented by Gustav Schatte, of Dresden, Saxony, has for its object to produce durable white or colored paints, containing a luminous substance, which causes them to shine in the dark, without changing or neutralizing in daylight the tint of the coloring substance or substances contained in such paints.

For this purpose Zanzibar or Cowrie copal is melted over a charcoal fire; 15 parts of this melted mass are dissolved in 60 parts of French turpentine, and the resulting mixture is filtered, whereupon 25 parts of pure linseed oil are added, which linseed oil has been previously boiled and allowed to cool a little. The lake varnish thus obtained is carefully treated in a paint mill with granite rollers, and worked into a luminous paint by one of the processes hereinafter described. Iron rollers capable of giving off under great pressure small particles of iron, which might affect the luminous power, should not be used.

Lake varnish as obtained in commerce contains nearly always lead or manganese, which would destroy the luminous power of the calcic sulphide. A pure white luminous paint is produced by mixing 40 parts of lake varnish obtained as described with 6 parts of prepared calcic carbonate, 12 parts of prepared zinc sulphide white, and 36 parts of calcic sulphide in a luminous condition, in an oil vessel, and therein worked into a coarse emulsion which is then ground fine between the rollers. To produce a red luminous paint 50 parts of the said lake varnish are mixed with 8 parts of prepared baric sulphate, 2 parts of prepared madder lake, 6 parts of prepared realgar (diarsenious disulphide), and 34 parts of calcic sulphide in a luminous condition, and the mixture worked in the same way as described for the white color.

To produce a luminous orange color, 46 parts of prepared lake varnish are mixed with 17.5 parts of prepared baric sulphate, 1 part of prepared Indian yellow (jaune indien), 1.5 parts of prepared madder lake, and 35 parts of calcic sulphide in a luminous condition. To produce a luminous yellow color or paint, 48 parts of prepared lake varnish are mixed with 10 parts of prepared baric sulphate, 8 parts of prepared baric chromate, and 34 parts of calcic sulphide in a luminous condition.

To produce a luminous green color or paint, 48 parts of prepared lake varnish are mixed with 10 parts of prepared baric sulphate, 8 parts chrome oxide green, and 34 parts of calcic sulphide in a luminous condition. A luminous blue color is produced with 42 parts of prepared lake varnish, 10.2 parts of prepared baric sulphate, 6.4 parts of ultramarine blue, 5.4 parts cobalt blue, and 36 parts of calcic sulphide in a luminous condition. A luminous violet is produced with 42 parts of prepared lake varnish, 10.2 parts of prepared baric sulphate, 2.8 parts of ultramarine violet, 9 parts of cobaltous arseniate, and 36 parts of calcic sulphide in a luminous condition.

A luminous gray color or paint is produced with 45 parts of prepared lake varnish, 6 parts of prepared baric sulphate, 6 parts of prepared calcic carbonate, 0.5 part of ultramarine blue, 6.5 parts of zinc sulphide gray, and 36 parts

of calcic sulphide in a luminous condition. A yellowish brown paint is obtained with 48 parts of prepared lake varnish, 10 parts of prepared baric sulphate, 8 parts of orpiment, and 34 parts of calcic sulphide in a luminous condition. Luminous colors for artists may be manufactured, if in the mixture previously described the respective parts of lake varnish are replaced by the same quantities of pure East Indian poppy oil, and the product is then finely ground and prepared.

Luminous colors for oil printing may be produced by using instead of the above mentioned parts of lake varnish, the same quantities of pure linseed oil, pressed without heat, and thickened by boiling. All the paints described may be made into luminous colors suitable for making colored paper and other purposes, if the lake varnish is omitted, and the dry luminous colors thus got are ground or mixed with water, and some binding substance free from acids.

They may also be made into luminous wax figures for casting on hollow glassware and similar objects, if, instead of the lake varnish composed as described, ten per cent. more of japan wax and the fourth part of the latter quantity of olive oil is used, or into colors for painting on porcelain. The color is painted on porcelain, and then incinerated with the exclusion of air. The paints may also be treated with soluble glass (potash and soda water glass.)—*Scientific American.*

and the Auxiliary Trades.

THE NEW SERIES COMMENCED JANUARY, 1875.

THE PRINTING TIMES AND LITHOGRAPHER is a high class journal, devoted to the Printing and Graphic Arts, in all their various forms. It derives its information from, and circulates in, all parts of the world. No pains are spared to insure the accuracy of its intelligence and to render it in every respect worthy of the support of Letterpress Printers and Lithographers, as well as Artists, Antiquaries, and Literary Men generally.

Published on the 15th of each month, 4to, in wrapper, price 6d. Annual subscription (payable in advance), 8s., post free to the United States. Rates of Subscriptions for foreign countries on application. Post-office orders to be made payable at the West Central District Post Office, High Holborn, of WYMAN & SONS, 74 and 75 Great Queen Street, London, W. C., England.

AN AUTHOR'S FIRST PROOFS.

It is a solemn moment, I know none more solemn, when one gets his first proofs. The young man, of course I do not mean the young man who has been brought up among proofs, and whose family all belong to the profession, but the young man from the country feels a choking at the throat and a beating of the heart; he is ashamed of himself. I do not know why, but he is; he feels sure the work will turn out badly; he has been a fool, he thinks, to believe that he can write. Then he falls to work nervously and eagerly. He reads his proof first critically to see if the sentences are balanced, then he reads it coldly, as if he were a reader for the press, and only cared for the right spelling, the proper stops, or the wrong fonts; then he reads it a third time, and begins to alter adjectives, displace adverbs, and change semi-colons into colons—printers are all in a conspiracy to abolish the old-fashioned stop called the colon, to put capital letters where they ought to be—printers are also leagued together to abolish capital letters. Next he reads it a fourth time in order to put *then* for *thus*, *thus* for *then*, *then* for *there*, and *there* for *then*, *these* for *those*, and *those* for *these*, with other such corrections of errors which the printers make out of pure gait, and for the fun and joke of it. Then he reads it suspiciously, because, perhaps, some date is wrong, or there is some small error of fact. Lastly, with infinite pains, he writes up the proof a little here and there. At last, reluctantly, he lets it go, but asks for a revise; when the revise comes he makes more corrections and asks for another.—*Walter Besant.*

THE KERNER.

\$1.

IT is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with Iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

— A SPECIALTY. —

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 19.

NEW YORK, NOVEMBER 8, 1883.

WHOLE NO. 437.

WALL-PAPERS—HOW TO SELECT THEM

IT is said that wall-paper was first used in Europe as a substitute for tapestry which was so commonly employed in the middle ages, partly as a protection against the cold and damp of the stone walls of the houses, and partly, no doubt, as an ornament. As to its origin, wall-paper may have been one of the many inventions borrowed from the East, and might be traced, like the introduction of porcelain, to the Dutch trade with China and Japan.

The Japanese make great use of paper. With paper and the bamboo they contrive to fill out a large part of the catalogue of the necessities of life, not included under the head of food, clay and wood serving for the other part, but the use which they make of paper in the construction of these houses is singular. The walls are lined with this material, and the divisions between the rooms are made largely, if not entirely, by means of screens, covered with paper, as a rule, though in some cases silk is employed. Now, what makes it seem probable that the first European notion of wall-papers came from Japan, is the fact that the first papers made in Holland, and thence introduced into England and France, were printed, not in rolls, but in small pieces a little longer than they were broad, the form in which wall-papers are made in Japan.

It was not until some time in the last century that the present mode of making wall-paper in long rolls was adopted. Early wall-papers were printed from blocks and were only one of the many modifications and adaptations of the block printing which gave us our first books and our first woodcuts.

The printing of papers for covering walls is said to have been introduced into Spain and Holland about the middle of the sixteenth century. It is maintained by some that the mode of printing patterns on small pieces of paper by the Japanese was an imitation of the Spanish squares of stamped and painted leather with which the grandees of Spain covered their walls—a fashion that spread all over Europe. It must be remembered, how-

ever, that in the sixteenth century Spain and Holland were most intimately connected, and there was such a constant give and take between them, so far as arts and manufactures were con-

cerned, that it would be hard to decide such a question as this with certainty. It is even possible that the Japanese themselves may have borrowed their first notion of printing their wall-papers, in the manner they did, from a former custom of using leather; at any rate, many of their wall-papers imitate stamped leather in texture and pattern, and even in smell, and are not easily distinguishable from it.

The size of the pieces employed were such as were most naturally and economically cut from the skins of cattle with which Spain abounded, and it is possible that these skins so stamped and ornamented may have been introduced into Japan by the Dutch and imitated by that very imitative people, the Japanese.

Within the past few years there has been a great improvement in the general character of household furniture, and this has gradually caused a demand for an improvement in the designs, quality, &c., of wall-papers. Hence, in the general course of improvement in household decorations, these have not lagged behind. There is now in America as wide a field to choose from in selecting suitable coverings for the walls of dwellings as can be found anywhere in the world. English wall-papers, from the most conservative patterns to the latest artistic growth, are found in all of our best shops, and Paris itself cannot show more pretty, coquetish, elegant, stately or rich designs at home, than she now sends to New York every year from her overflowing store.

It may be said, in passing, that France makes no account of one of the prime articles in the curriculum of the modern English and American schools of decorative art—namely, wall coverings. The French imitate anything and everything that they can force into the service of decoration, and, when they feel like it, paint flowers and fruits on wall-papers or weave them into silks or paint them upon chintzes with such grace and truth to nature as to "deceive the very elect." But it was from the English that America learned to make dining-rooms dark, and

PRIZE DESIGN FOR WALL-PAPER, BY MAREK VAN VLECK, PUPIL OF THE WOMEN'S INSTITUTE OF TECHNICAL DESIGN.

to crowd them with heavy furniture. So with bedrooms.

In covering walls with paper, one of two courses must be adopted. It must be considered whether the paper is to serve as a background for pictures and ornamental objects, or whether

FLORAL DESIGN OF 1730.

it is to be treated as an ornament in itself. If it is to serve as a background for pictures, then it must be determined what will best harmonize with the pictures, and what will at once keep them in place and bring them out; but it is an error to suppose that a gilt paper is always wanted for this purpose. If the pictures are dark and rich looking, in gold frames, they will be suitably backed by a sober background in brocade or arabesque pattern, one that will suggest the silks or leathers employed for such purposes in older times. Such a paper would, indeed, be "quiet," but it would not be dull or undecided, which is what people in general

FLORAL DESIGN BY DEFOSSÉ.

usually mean when they use the expression "a quiet paper." Now, a wall-paper should never be dull or undecided. On the contrary, it ought always to be decided in its tint—a very different thing from being "staring" or "pronounced," and it ought to harmonize with the pictures or

ornaments. It should diffuse, so to speak, the tone of the objects that hang upon it over the whole wall, but it should be subordinate to them, neither overcrowding them nor making them look like isolated spots.

But, the pictures may be of quite another sort from those described. They may be photographs, or prints, or delicate water-colors, and even in this case the same rule will hold—that the wall-paper should be one that will accord with the general tone of the drawings and photographs. Papers with loose, flowing patterns, damasks, or arabesques in the light greens, grays, blues, reds and yellows, will harmonize with such pictures and show them at their best.

In the matter of selecting a wall-paper as an ornament in itself, tastes differ, but a correct judgment will choose something that will harmonize with the furniture and character of the apartment. If the furniture be plain, the paper should be of a modest, unpretentious pattern, and if the reverse, *vice versa*. If the room is to be used much at night, the paper should be

EXAMPLE OF RÉVEILLON DESIGNS.

of a character to light up well. If the room has much sun in it during the day, a color should be chosen that will temper the brightness of the sun's rays, or one that will so chime with it as to be made more effective by it.

The following remarks upon wall-paper are taken from the *Decorator and Furnisher*, to which journal THE STATIONER is indebted for the drawings which illustrate this article.

The purpose of wall-paper could have had but one prompting, in France at least, and that the reproduction or imitation in a cheap and economical way of the elegantly frescoed walls, in a form that could be adopted by the middle-classes and gratify the desire, at little outlay, to approach the luxury of the Court. Tapestry and stuffs were used by the rich, and by the nobility, and the semblance of these materials was shown in paper, the folds, the creases, the peculiarities were faithfully given, and the well-to-do or moderately situated tradesman found himself able to bring about his home a "counterfeit present-

ment" of royalty, and possess himself at an humble cost of those things which would feed his imagination in the thoughts that he dwelt in a palace.

A floral design of this character from a woollen drapery, about the year 1730, is given.

POMPEIAN PANEL, BY DAUPTAIN.

Until 1769 there appears to have been but little practical progress in the manufacture, and even at that period the industry of making wall-paper was associated with that of stuffs and upholsteries. A notice in a paper of that year calls attention to an Englishman who had obtained permission to establish himself near Paris, and further observes that he "manufactures paper for furnishing, and prints of all kinds of linens," indicating that the paper business in itself was not considered sufficiently important to demand his entire attention. In 1785 a like announcement from another manufacturer is found, and it is not until 1789, when Réveillon becomes known to us, that we learn of any house exclusively devoted to this trade.

DUFOUR, TIME OF THE EMPIRE.

Thiers, in his "History of the French Revolution," tells of the attack by a mob on the factory of Réveillon, who it seems employed three hundred workmen, and had aroused their animosity by reducing their wages to a figure that made living almost impossible—so they claimed.

The factory was "looted," sacked and burned, and gave Réveillon a celebrity and a universal sympathy that brought the most gratifying re-

OCTOBER, DESIGN BY DUFOUR.

sults to his successors, and conferred upon him personally the title of father to the paper industry.

The papers of Réveillon were extremely elegant and in the best of taste. With the charming and lively grace of the times he imitated the magnificent stuffs of la Pompadour, and with a shrewdness that does him justice and explains his success, he employed the weapons of his adversaries, the frescoers, to their own discomfi-

tered, to give their compositions upon his paper. That he did so his sales evinced, and the design shown is but a fair example of his brilliant style.

Zuber, living contemporaneously with Réveillon, aided materially in advancing the fortunes of wall-paper, and some of the most pleasing and peculiar patterns were from his manufactory, landscapes, Swiss scenery, Italian incidents from the fertile pencil of Carl Vernet, or Brazilian forests from Rugendas. The lighthouse at Koat-Vue, which we illustrate, is a perpetuation of the style of Zuber, and from the studio of his grandson.

Jacquemart was the immediate successor of Réveillon, and continued the same styles of designs that made his predecessor famous, with the difference that he was compelled to conform with more rigorous taste and with the pomp and

BIRD PIECE, BY DAUPTAIN.

luxury of a luxurious epoch. He copied the Greeks and Romans, as was the fashion of the

tious display of ill-timed and illy-arranged draperies, as will be seen in one of the illustrations. These draperies alternate with trophies, stands

LIGHTHOUSE AT KOAT-VUE. ZUBER DESIGN.

of arms, casques, and other attributes suggestive of civil and military life. Then, as if wishing to approach another extreme, Dufour pictures the scenes in the lives of the Peruvians, Mexican incidents, and fabulous occurrences in mysterious or imaginative countries, which pictures were often inspired by the romantic songs of the day and the dramatic exaggeration of unusual events. The adventures of Telemachus were illustrated on the walls, and Tasso was translated in colors. The history of Psyche was given with singular taste and good effect,

A SKETCH FOR A DADO BAND, BY E. ALDIE CLEMENT.

ture. The designs of Desrais, Prieur, Jean-Baptiste Fay, Huet, and other celebrities, were eagerly sought for panels and walls, and Réveillon engaged himself, so long as this fashion

times, and employed the most talented artists in their several lines.

Dufour reflected the bad taste of the Empire, and in his productions is found the cold, preten-

and from the titles of two panels, Psyche making offerings to Venus, and a scene at the bath, there may be gathered a hint of the charming subjects and the scope they gave for treat-

ment. Dufour, however, cannot be credited with all the poor taste he displayed, for he was naturally forced to meet the demand of the times and of the public disposition, and that run in the direction we have pointed out. The months of the year 'twas customary to symbolize, as where October is represented, and these features might be said to be specialties with Dufour.

At this same time the widow and son of Dauptain were becoming famous as manufacturers of classically designed papers. The son possessed a fine knowledge of chemistry, and besides a thorough general education, both of which enabled him to create new patterns or revive ancient ones, and also to incorporate into the fabrication of the material the most useful and enduring chemicals. The Pompeian panel is an excellent example of Dauptain work, as is also the bird piece. During 1809 and 1810 Simon, another well-known manufacturer appears, and is content to follow the traces of his predecessors, Jacquemart and Dufour. We see from this house the compositions in the style of David, the painter of the Empire. Pretty friezes and delicate borders were introduced, and Simon continued in the styles of his masters until 1820.

We should not more than glance at the multitude of imitators of these masterly workers, and the scores of manufacturers whom they brought up around them, some, indeed, to produce designs that were in every way worthy of their masters, while the majority sank into an unknown and unnoticed insignificance.

Delicourt became famed for his dancing girls in panels and left his business, his reputation and his widow to Madère in 1834, and he in turn gave all these chattels to Defossé in 1849, and Defossé in 1860 was making the floral patterns of the style shown.

Dauptain the younger, son of that Dauptain we have already noticed, abandoned the disagreeable style of the Empire and the Restoration, and introduced in his compositions a great variety of designs, no one form being notably prominent, and all approaching nearer to the fashion which prevails at our own day. He made arabesques from Martin's designs, and utilized the amusing sketches of Aimé Chenavard; he followed the idiosyncrasies of fashion, copied his patterns from the stuffs of the Middle Ages, or from those of the Renaissance and the seventeenth and eighteenth centuries, as each in turn became prominent. In this manner he acquired a wide reputation, and his patterns were often imitated by his rivals in business. So versatile and enterprising, so rich in his ideas for his associates, that he may not improperly be said to have founded a school, to have created a style.

Dauptain brings us to the present; from 1860 the progress of the manufacture of paper has been rapid and decided until to-day it is one of the large and important industries of the world.

Of the technical construction of wall-paper there are two dates in its history, each of which may be said to mark the beginning of a new development. About 1835 endless paper, or that printed in a continuous strip, was introduced. About 1852 we find the printing machine invented. These two discoveries have exercised a great influence upon the price of production,

and in consequence has largely increased the sales, for the economical manufacture of anything is one of the first conditions of success. But in wall-paper it raised a storm that waged long and furiously between the artist and the manufacturer, on the one side the artists unanimously against the machines, and on the other side the mass of public sentiment preferring the mechanical work.

THE LYONS FAÏENCE INDUSTRY.

In a recent number of the *Sprechsaal*, Herr Jaennicke has thrown light upon many curious matters relating to the above subject. He remarks that, although the influence of Italian taste upon the origin and development of the faïence industry in the South of France (during a period ranging from the sixteenth to the eighteenth centuries) is a generally accepted fact, yet our historical acquaintance with the features of its progress is fragmentary. In fact, until a comparatively recent date, the only literary record on the subject was the brief treatise of Piccolpasso in the introduction of his *Arte del Vasajo*. Lyons is there mentioned among the cities where the faïence industry was being carried on, and, in the absence of any special reference to its being a new creation, the inference would naturally be deduced that this branch of artistic labor was in a regularly established position at that early period.

The works of Count de la Ferrière-Percy and C. M. Michel have, of late years, thrown light on the origin of the industry at Lyons, their information having been derived from municipal and other records. According to the detailed accounts which Herr Jaennicke furnishes, it would seem that a Genoese merchant, Sebastian Griffo, obtained from the city, in 1555, permission to start a faïence manufactory, and, on the grounds that this industry was a new one in the city, as well in the kingdom of France generally, obtained immunity from taxes during two years. He further contracted to procure Italian workmen, and to utilize the services of poor children in minor operations connected with the factory. The apparent contradiction between this statement and that of Piccolpasso is considered by Herr Jaennicke to be capable of explanation by the possibility that the faïence manufacture had been given up from want of commercial success, and was, therefore, practically a new industry. A document in the Paris National Library records an extension to Giuliano Gambya and Domenico Tardessin of a concession hitherto solely enjoyed by Giovanni Francesco da Pesaro, in whose employment they had been. This document bears no date.

Amid this divergence of opinion, the conjecture of M. Michel tends to prove by independent arguments that the industry was established at Lyons before the time of Griffo. In the year 1536 the church at Brou, near Bourg, was completed, this work being a foundation established by Margaret of Bourbon (widow of Philibert II., Duke of Savoy and Count of Bresse). In the decorative treatment of this work numerous artists from Italy, Flanders, and Germany had taken part. Some portions of the faïence tiles which formed part of the choir decoration have been preserved, and the character of their ornamentation is

said to prove the influence of Italian art upon their production. It is conjectured that after the completion of their task, some of the artists employed in the above named work settled at Lyons, as being the nearest important city to the scene of their temporary labors.

Herr Jaennicke remarks that signed and dated specimens of Lyons manufacture belonging to the sixteenth century have not been met with, yet there are to be found in France objects which unite certain special characteristics of the French and Italian styles of that period, and which display a marked realistic tendency in the treatment of architectural styles of ornament. These he considers to belong to the period in question. The singular orthography of certain inscriptions on these specimens is considered to indicate the imperfect acquaintance with the French language possessed by the Italian immigrants who made them. At the same time, it is noticed that inexact spelling was at that time not unfrequent in many ceramic inscriptions. Among the objects referred by M. Michel to that period are several vessels used by apothecaries for keeping their wares, which were found in use in the departments of Rhone and Drome. In one case, the ornamentation consisted of yellow and blue bands, the latter with somewhat heavy yellow arabesques; while the yellow portions are covered with brown network. In the middle portion, on a white ground is the inscription in blue, M. ALBV. RHAT., in Gothic letters, and underneath a profile bust of the Byzantine Emperor, Leo I., whose name appears in brown running hand, as an inscription near the bust. Four such objects, which were obtained from the hospital at Brest (Drome) are specially described by M. Michel. One of them has on its lid an heraldic lily, and the date 1617 in shaded orange color on a blue ground. It has in the centre a white shield, with the inscription LOT. DE HYACINTHO in blue Gothic letters, behind which the heraldic lily again appears surrounded by arabesques. A second vessel of the same set displays the same heavy arabesques, but without lilies, and with the inscription DIAPRVNIS S. The other two are respectively marked S. DE POMIS and S. ACETOL LIM.

With respect to the second half of the sixteenth century, there do not seem to be any reliable specimens extant which can be attributed to that period, respecting which there are likewise no available records. After a break of some duration, we arrive at more exact data as to the eighteenth century. The Lyons faïences of the first part of the century resemble the other manufactures of that period in the south of France. After the year 1760 there was evidently a lower class of ware produced, in which figures, Chinese subjects, flowers, &c., are blended in doubtful taste with eccentric legends. According to Brossart, a factory which existed in the early part of the eighteenth century, in the Quai Pierre-Seise, used a shield with the inscription:

A L'ENVIE
DV 1718 POT.

Joseph Combe next merits attention. After having been engaged some time in a Marseilles factory, he established himself at Lyons, and was associated with a merchant of that city,

J. M. Ravier. He had obtained from Louis XV., in 1733, a concession for ten years, which authorized him to use a shield with the inscription, *Manufacture Royale de Fayance*.

It is considered that this royal patronage may account for the frequency with which the lily is met with in the ceramic ornamentation of that time. This factory seems to have shortly afterward passed into other hands. Ravier seems to have withdrawn in 1736, and subsequently a certain Madame Lemasle acquired the patent rights of Combe, and obtained their prolongation till 1758. The factory was in the St. Clair quarter, and from the fact that a subvention was afterward granted it by the city, it is conjectured that it was not entirely a commercial success. Both Combe's and Madame Lemasle's faïences are decorated in blue. Of Combe's manufacture there have been hitherto but few pieces recognized. These, however, are described as having been remarkable for their rich, uniform and brilliant enamelling and a somewhat bluish shade. Among these is noticed an oval dish, thirteen inches in length, belonging to the Dommartin collection at Lyons, representing the transformation of Daphne, and ornamented with the arms of the Perrichon family in blue (Camille Perrichon was, in Combe's time, secretary to the Lyons Chamber of Commerce). The narrow border is ornamented in the Moristiers style, and underneath the dish is the inscription :

LYON

C. F. (combe fecit).

The Lyons Museum of Art and Industry possesses other specimens of Combe's manufacture.

The productions of the factory during Mme. Lemasle's proprietorship would seem to have been unmarked; but from certain points of analogy with Combe's works, Brossart has attributed to that period various objects known to be of Lyons make, but the exact date of which has been a matter of uncertainty. This factory seems to have been taken over in 1758 by a person named Patras; for, according to the municipal records, a subvention was paid him in 1766. Details are wanting as to the factory of Doutre, which existed at the Quai Pierre-Seise toward the close of the eighteenth century.

Two fruit baskets are in the Lyons museum which are ascribed by Brossart to the manufacture of Patras. They are marked—

L. P. S.

A LYON

in yellow, and have a plaited open work border. They are considered remarkable for their elegance of form in conjunction with light, well-burned and close material. The white enamel has a slight tendency toward a yellow shade. One of these contains, in monochromous yellow, a representation of John the Baptist in the desert, while on the other is depicted Peter with the cook. In both cases the pictorial ornament is surrounded with garlands of flowers, including many of a yellow color. Two plates in the Liesville collection are considered as presenting similar characteristics. On one is represented Cupid piercing Phillis' heart, while on the other is a picture in the Watteau style of a merry company dancing and singing. Appropriate

poetical quotations are upon the borders in each instance.

The faïences of Doutre seem to be only exceptionally marked and then with the full name. A curious specimen of this description is a lantern in the Dommartin collection. This factory produced faïences of the most varied kinds with decided technical skill; but the artistic value of the great bulk of its manufacture (much of it being known as *faïence révolutionnaire*) is considered very low in the scale of merit. Michel describes two unmarked plates painted in pink enamel by a steady yet fluent hand. One of them bears a profile bust of Louis XVI. turned toward the right and the other a bust of Marie Antoinette turned toward the left.

The sculptor Chinard, of Lyons, produced a number of terra-cotta medallions about the close of the last century, many of which are still in existence. The collection of Eugene Tondou, put up for sale in 1865, contained a terra-cotta bust of this artist, dated 1792; and Michel had in his collection a medallion marked *Chinard de Lyon à Oullins*, 1808, representing the old man with long hair.

Herr Jaennicke remarks in conclusion that faïences of local manufacture are very generally diffused in Lyons and the surrounding district, particularly in the form of table-ware, fountains, &c. Marked specimens are, however, extremely rare, and his object in publishing the information given in his interesting article, is to enable collectors who possess specimens of this ware to trace them back to their legitimate origin.

LABEL-MAKING MACHINE.

Among the mechanical appliances shown at the Oldham Industrial Exhibition is an eye-letted label-making machine, patented by E. A. Pallister, of Wellington street, Leeds. The machine, which can be worked by either treadle or steam power, punches eyelets, and delivers automatically all sizes of labels, from $2\frac{1}{2}$ in. by 1 in. to 7 in. by 4 in., at a guaranteed speed of 2,000 per hour. The *modus operandi* is as follows: The material to be used, which may be either cloth or manilla, is first cut down to the size required. It is then fed into brass slides, which are easily adjusted to suit any size, both sides being equally moved closer or wider from the centre by turning a wheel which actuates a left and right handed screw upon a swing template. This template is pointed, and in swinging toward the machine fits into another, exactly its opposite in shape, having an incision suited to the reception of the pointed one. The pointed template, after entering the second one, moves upward, causing the label to receive its first fold, and raising and leaving it in the position for its second fold. The second fold is made by a "carrier plate" chopping the folded ends of the labels into an opening behind the grooved template, and carrying the label forward on a bearer, keeping the "nose" or second fold down until it reaches the position in which it becomes punched. The upper punch descending perforates the material, and holds the label until the carrier recedes, then it rises and the under hollow punch swings

aside. The label remains in this position, held by springs, until the upper punch comes down a second time to meet a spindle or shaft rising with an eyelet upon it. Both meeting, the eyelet is put through the hole and clenched. The eyelets, placed promiscuously in a box for the purpose, are fed from it by a revolving brush inside, and thrust through the apertures so shaped as to insure their proceeding the proper way into a channel or spout which conveys them to the pin on the top of the rising spindle, which, as it rises, takes one eyelet each time. Fingers which hang from the carrier-arms push the completed label out, while the carrier brings forward a second one to be punched and eye-letted.—*Printing Times and Lithographer*.

BALL PROGRAMMES.

Charles Beck, Philadelphia, has just issued his line of ball programmes for the season of 1883-84. The line is full and attractive, consisting of over forty designs, all of which are entirely new.

Among the numerous designs which will attract attention is one composed of two embossed gilt cards, on the front of which is a yacht in full sail, the water being simulated by puffings of lace; on the reverse side is a handsome embossed bouquet.

Another has a beautiful basket of flowers, resting in a bed of ruching and lace. Still another, a fine embossed deer's head, surrounded by lace and spangles.

Other novel designs, representing a wheelbarrow filled with flowers, a lady's hand containing a bouquet, on an elaborate foundation of ruche and lace, with a plush fan and flowers on the back, and a silver bird hovering over a tempting bed of flowers, are especially noticeable.

The "Palette" programme has a beautiful nautilus shell on the front, surrounded with lace and flowers, while the reverse side consists of a plush palette and puffings of satin, with space for the monogram or name of the society, &c.

There are also several other designs, with blank spaces intended for the same purpose, the lettering being done in gold or silver, gratis.

An entirely new feature has been introduced this year, combining contrasting colors of plush and satin on the same programme, the effect produced being very rich and striking. Four designs in this style were especially noteworthy, one consisting principally of puffed satin and plush, with an embossed elephant's head on it; another, with bouquet of flowers and bottle on it; a third, a very beautifully executed head of a horse, while a fourth had a silver padlock and key attached to it by a ribbon bow. The last four have plush doors, to the inner side of which the order of dancing can be readily attached, the whole being enclosed in a neat box.

Notwithstanding the expense incurred in getting up this line, all parties desirous of having samples can have them at list prices. Price-list will be furnished on application.

ADVERTISING DEVICES.

The first chromo advertising cards appeared in this country as early as 1862. Cards with pictures were used for advertising purposes prior to that date, but the engravings on them were printed in black. Cards in colors were published in England many years ago, but the idea of distributing souvenirs for advertising purposes originated in this country. In 1862 the first large chroma appeared on this side of the Atlantic. It was the product of a large lithographing firm in this city, and the original is still in existence. The achievement was considered remarkable, and the genius and enterprise of the firm were for some time afterward quite a topic for public comment.

In 1862 the same firm published two series of chromos, one series being a set of portraits of celebrated generals of the war of 1861 and the other a set of floral cards. No special effort was made, however, to create a market for these goods at that time, and their sale was very small.

Fig. 9.

In fact, nothing special was done toward multiplying designs of advertising cards until 1872, when a series of comic cards, called "Our Country Cousin," the "Laughing Negro," &c., were put on the market. These were cheap cards, and sold for \$6 per thousand. They were cheap for that day, but would be extremely dear in these times. The sales for the year did not exceed 250,000, but shrewd producers saw possibilities for an immense increase in the demand for these goods, and new designs were originated.

Fig. 5.

In 1877 the trade had increased so largely that one firm catalogued fifty series of cards for advertising purposes. Then came the chromo picture reward cards for every day and Sunday schools. About this time Christmas cards were introduced in England, and soon after importers here began to introduce them to the trade in this country. The cheapness of their production has alone kept them in the American market, for the increased facilities of American lithographers and publishers, in the course of time enabled them to produce a card equal in every respect to the imported article. Experience has shown that a card can be imported as cheaply as the same quality of card can be produced here. This has

been a great stumbling-block to American producers, but it is something that genius and enterprise has been able to overcome to a great extent, and cannot fail to remove in time. Success has been achieved by energy and artistic production.

The majority of chromo advertising cards are made from original designs, but when a demand springs up for a foreign device it is reproduced,

Fig. 4.

just as a foreign novel is republished. But publishers generally take pride in their own productions and do not publish more of the foreign article than they are actually obliged to. Designs may be divided into three classes: "Florals," "figures" and "landscapes." Of the three, "florals" are the most popular. To be popular a card must be attractive, that is brilliant in color and pleasing in design. It must also be moderate in cost. The cheaper grades of cards are printed on ordinary wood-pulp paper while the expensive cards are printed on fine chromo paper with a plated or coated surface. Each producer strives to reduce the cost of his goods and at the same time to improve their quality.

The trade in chromo advertising cards within the past few years has become simply immense. The number of these cards distributed in the course of a year reaches many millions, while a few years ago it could be counted by a few thousands. The trade has not only extended over all parts of this country, but publishers here are sending large numbers of cards to Cuba, South America, Mexico and other countries.

SHAPE NOVELTIES.

As the business in advertising novelties expanded, the manufacturers found more and

Fig. 10.

more room for the exercise of ingenuity in studying popular taste and in the production of such goods as would take better with the public than the products of their competitors. It became evident that nothing could be done to im-

prove the quality of the chromo card without increasing its cost, and, indeed, it would have been difficult to do this even, for they had become well-nigh perfect. It was plainly to be seen, therefore, that something had to be done to give novelty to the form of the chromo. Hence originated the idea of shape novelties. It is needless to dwell on the history of these goods, as it is familiar to every one, particularly to every one at all connected with the stationery or fancy goods trade.

In shape novelties all of the characteristics and qualities of a good chromo are preserved, while the card is made additionally attractive by being made to conform to the shape of the object or objects portrayed. Shape novelties, therefore, cost more than chromos because it requires more labor and material to manufacture them. Many of these articles are now being embossed and it is possible that ere long they will be varnished. As an advertisement the shape novelty is more desirable than the chromo,

Fig. 12.

though it can never entirely take the place of the latter.

To attempt to give in detail the great variety of designs that have been produced in shape novelties even within the last few months would be an endless task. A few of the most striking styles that are at present commanding popular favor will suffice. One of the most popular articles that has recently been brought out in shape novelties is the "Owl" shown in Figure 1. It represents an owl sitting on a branch of a tree entwined with beautiful vines and flowers. The picture is very natural and lifelike, much care having been bestowed in its production.

Fig. 2 represents "Kittens in a Basket," which is perhaps the

Fig. 3.

finest shape novelty in the market. Two snow-white kittens have playfully jumped into a lunch-basket, the napkin in which has been disarranged and is lying over the edge of the basket. The kittens evidently are content with spoiling the contents of the basket and are not disposed to increase the mischief done by partaking of the "goodies," which every lunch-basket is supposed to contain. The expression of two little kitties placed in such circumstances has been admirably represented by the artist.

In Fig. 3 there is a representation of the old-fashioned iron pot, which is yet frequently met with in some rural districts. The pot is embellished with a garland of flowers and a fine

Fig. 11.

chromo picture representing a ship in mid-ocean. There is a touch of romance and history about this novelty that has made it quite popular.

"The Elk's Head" is represented in Fig. 4. This is a large lifelike shape, that makes a pleasing souvenir.

In the category of shape novelties come the Wedgwood tiles, which are a set of Grecian pictures representing familiar Grecian scenes. They are quite nice as mantel ornaments, and can be used as panel pictures. One style of these shapes is represented in Fig. 5.

THE STATIONER is indebted to J. G. Bufford's Sons for the engravings alluded to.

A novel design in shape cards is represented in Fig. 6. It shows three youths engaged in coasting. A more faithful and lifelike representation could not be conveyed even in a more pretentious work of art.

Fig. 7 represents the juvenile stocking brimming over with the gifts of Santa Claus as it appears on Christmas morning.

Fig. 7.

The other shapes represented are "Santa Claus," "Hen and Chickens," "Coaching Party," &c. The engravings were furnished by J. E. Linde.

Happiness is not confined to any sphere of life.

MARQUETERIE.

There are many imitations of marqueterie, and some of them so excellent, artistically, as to be deceptive even to judges and experts of this work. One imitation is printed upon paper while another is printed upon wood. Neither, of course, approach the genuine in durability, the paper being affected by water used in washing, and the color rapidly fading from that upon the wood. These are but transient substitutes, and can be detected by the indefinite line which marks the ornament as compared with the sharp and defined outline of the real article. Marqueterie, if it be well made, will wear for years and withstand the ordinary rough treatment of the average furniture.

From the East, India, Egypt, Arabia and the surrounding countries, we receive many rich examples of inlaid work or marqueterie. The Bombay plaques and platters and boxes are so familiar to us that we need but to name them. The character of the inlaid work upon these little things is known as the *piqué*, and it is believed to have been an art not indigenous to the country, but imported from Persia in the very, very distant past, and so assiduously worked and so completely mastered by its adopters, that it has become associated with their works alone. The marqueterie is made of tin wire, sandal

hexagonal, three-cornered and labyrinth. In Western India tin wire is used instead of brass, in other places the brass is varnished, following in this respect the custom in Persia, Egypt and Algiers. The patterns are generally geometrical, and almost every figure can be traced to the con-

Fig. 6.

ventionalizing of a floral subject. Inlaying in mother-of-pearl was at one time much practised. The simpler designs were formed by filing pieces of mother-of-pearl to the required size and letting them into the pattern cut in the block of wood. The more elaborate patterns were, with fragments of differently colored mother-of-pearl, worked into cement and laid on the surface to be ornamented. Of the coarser and commoner kinds of this inlaying a little is still used for the frames of guitars and violins.

Mynpuri work is similar to buhl-work, and consists of inlaying brass wire upon surfaces of rich brown wood, being done in geometrical or scroll patterns.

In the fifteenth century Florence became prominent in its manufacture of marqueterie, and also made what was called Certosina work, consisting of ivory inlaid into solid cypress wood and walnut. The style was of Indian character, and consisted of geo-

metric arrangements of stars made of diamond-shaped pieces, varied with conventional flowers in pots, &c. Some existing examples of this work shows it to have been, in its time, ex-

wood, ebony, Brazil wood, ivory (white and stained green), and staghorn. Strips of these materials are bound together in rods, usually three-sided, sometimes round, and frequently

Fig. 8.

diamond-shaped, and again the rods are so arranged sometimes as to present a peculiar pattern or figure when cut in layers. The patterns most popular in Bombay are the matting or square, a small round figure, the grain appearing like a row of silver beads set in ebony, the

Fig. 4.

tremely rich and interesting. Chairs are finished with geometric marqueterie of white and stained ivory. The popularity of ornamentation by means of marqueterie, so firmly established in Europe during the seventeenth century, is being revived.—*Decorator and Furnisher.*

PLUSH GOODS.

In the production of plush goods it would seem that manufacturers have reached the utmost limit not only in respect to quality, but in variety of design and the finish and ornamentation. Designs are literally numberless; the quality of material is the best that money can buy, while the finish and ornamentation are of so varied and highly artistic a character as to please the most exacting taste. Producers, too, have been very careful to give a wide range to prices, thus bringing these goods within the reach of the poor, while at the same time furnishing as expensive an article as the most lavish purse could wish.

The origin of plush goods is quite recent, going back only a few years ago. From small beginnings the trade expanded. Americans perceiving that there was money in novelties of

diamond shaped mirror, calculated either for the parlor or vestibule. A bouquet of porcelain flowers forms a very tasteful ornamentation. The glass is set in bas relief, while two candelabras, adjusted after the new extension pattern, constitute a desirable feature of the article.

The third cut represents a liqueur stand, of diamond shape, with a cut-glass bottle on either side, and the figure of a bear, natural and life-like, in the centre, hugging a hand mirror in true bear fashion. The base is mounted on bronze feet. This article makes a beautiful ornament for either the parlor or sleeping chamber. For these illustrations thanks are due to Henry Levy & Son.

DECORATING ZINC ARTICLES.

A beautiful and permanent dark or light green coating, resembling enamel, can be applied to

generally a dull surface it must receive a coat of copal varnish. If 15 grams of chrome alum and 15 more of hyposulphite of soda be added to the above solution, the article will have a brownish color. The above can all be applied to articles made of cast zinc.—*Neueste Erfind.*

EBONIZING WOOD-WORK.

There are many recipes for ebonizing, and the following are given by Harry Hems: 1. Infuse gall-nut in vinegar, into which rusty nails have been soaked; paint the wood with this, and polish and burnish when dry. 2. Wash the wood repeatedly with a solution of sulphate of iron, made by dissolving 2 ounces of sulphate in a pint of hot water. When dry, apply a hot decoction of logwood and nut-galls two or three times. When dry, clean with a wet sponge and then polish. 3. Brush the wood with a

DESIGNS IN PLUSH GOODS.

this character, began to enter into their manufacture. Nowadays, Americans are not dependent on the art and talent of the old world for these beautiful and useful articles. At one time, if an article for the boudoir or gentleman's dressing-case was required, the artist in Europe had to be called upon to produce it. Then America scarcely followed, while now she leads. About one hundred and fifty different designs of plush goods were produced by manufacturers in this country during the past season. The accompanying engravings show some of the more expensive styles which have been called into existence this season by the popular demand for these goods.

One of the cuts represents a toilet-box, with all of the articles used in making up the toilet, such as combs, brushes, hand-mirror, and small fixings required by either a lady or gentleman. The box is of rectangular form, and has a movable, slanting shelf, with various compartments for different articles. On either side of the slanting shelf is a cloth or hat brush. A lid opens from the top and one from the side. The box is finished in embossed plush, and is satin-lined, the lining of the upper lid forming what is called the sun-ray pattern—that is, being in ridges, running from a common centre, like the rays of the sun. As the hand-mirror is in the centre, the effect is most pleasing and novel.

A second cut represents a plush frame, with

all kinds of zinc articles, especially those made of sheet zinc, says Puscher, in the following manner: Fifty parts of hyposulphite of soda are dissolved in 500 of boiling water, and the solution poured at once, in a fine stream, into 25 parts of strong sulphuric acid. The milk of sulphur that separates will soon ball together in lumps and settle. The hot liquid containing sulphate of soda and sulphurous acid is decanted, and the cleansed zinc put in it. In a short time it will acquire a very brilliant, light green coating of sulphide, and only needs to be washed and dried. By exposing it repeatedly and for a longer time to this hot bath, the coating grows thicker and the color darker and more brilliant. The temperature must not fall below 145° Fahr.; when it does it should be heated up to 190° Fahr., to obtain a fine and brilliant deposit. By dipping these articles in dilute hydrochloric acid, one of acid to three of water, sulphuretted hydrogen is evolved, and this enamel-like coating loses its lustre and gets lighter in color. Aqueous solutions of aniline colors have little effect upon this dull surface and none on the gray brilliant coating. The effect of marbling can be obtained by moistening the gray zinc and applying hydrochloric acid in spots with a sponge, then rinsing it off, and while still wet flowing over it an acidified solution of sulphate of copper, which produces the appearance of black marble. As the zinc has

strong decoction of logwood chips several times. When dry, give it a coat of vinegar in which rusty iron has been placed. Dissolve beeswax in turpentine by setting in a warm place; apply warm with a brush, and rub it till it shines. 4. Wash with a concentrated aqueous solution of logwood several times, and then with a solution of acetate of iron of 40° Baumé. Repeat till a deep black is produced. 5. Put 2 ounces of logwood chips with 1 1/4 ounces of copperas in a quart of water, boil, and lay on hot. When dry, wet the surface with 2 ounces of steel filings dissolved in half a pint of vinegar. When dry again, sand-paper smooth, then oil, then fill in with powdered drop-black mixed in the filter. Work to be ebonized should be smooth and free from holes. Give it a light coat of quick drying varnish, then rub with finely pulverized pumice stone and linseed oil until very smooth. 6. Boil 1/2 pound of chip logwood in two quarts of water, and add 1/2 ounce of verdigris and 1/2 ounce of copperas, strain and put in 1/2 pound of rusty steel filings. With this go over the work a second time. 7. A pound of logwood boiled in four quarts of water, add two handfuls of walnut shells or peel, boil up again, take out the chips, add a pint of vinegar, and apply boiling. Afterward dissolve 1 ounce of green copperas in a quart of boiling water and apply hot. A good varnish for ebonized work is made by dissolving in alcohol some black wax.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

HOLIDAY TRADE FOR 1883-84.

ROBERT CLARKE & CO., Cincinnati,

DEG to call the attention of the Trade to their unusually large and elegant stock of Books and Fancy Stationery, selected from both home and foreign markets, with particular reference to the coming Holiday Season. Great pains have been taken to secure the newest and most elegant goods in the market, and the entire stock will be found, both in VARIETY, QUALITY and PRICES, one of the LARGEST and BEST in the country to select from. Particular attention is asked to the complete lines of

TOY AND JUVENILE BOOKS,

In Great Variety and of the Latest Issues.

TESTAMENTS, PRAYER AND HYMN BOOKS,

Of all Sizes and Styles of Binding.

POCKET BIBLES AND TESTAMENTS,

In New Styles of Binding, of our own Importation.

OCTAVO FAMILY AND PULPIT BIBLES,

In Plain and Ornamental Bindings.

ILLUSTRATED PRESENTATION BOOKS,

In Fine Bindings, at Low Prices.

POETICAL AND RELIGIOUS BOOKS,

In Bindings suitable for the season.

— ALSO TO — **FANCY STATIONERY** — OF ALL —
THEIR LARGE STOCK KINDS, COMPRISING

Ladies' Sewing Companions, in New and Elegant Styles.

Gentlemen and Ladies' Dressing Cases, in New Styles.

Handkerchief and Glove Sets, Imported and Domestic.

Cigar, Cigarette and Pocket Match Cases and Sets.

Writing Desks, Wood and Leather, in various sizes and shapes.

Tourist Cases, in Cloth, Roan and Turkey Morocco, of New Designs.

Portfolios, in various materials, of numerous sizes and patterns.

Backgammon Boards, in Paper, Cloth, Morocco and Wood.

Chessmen, in Bone and Wood, of American and Foreign make.

Cribbage Boards and Bezique Sets, in great variety of styles.

Croquet, Miniature, Parlor and Lawn sizes, in various styles.

Parlor and Children's Games, of all kinds.

POCKET BOOKS, PORTEMONNAIES, POCKET KNIVES, TABLETS, INK STANDS, SCRAP, AUTOGRAPH, MANUSCRIPT AND PHOTOGRAPH ALBUMS,

Glass, Bronze, Iron and Wood Paper Weights, Gold Pens, Cases, Pencils and Tooth Picks.

DRAWING BOOKS, CARDS AND MATERIALS, ARTIST AND TOY COLOR BOXES, TRANSPARENT SLATES, &c.

Buyers visiting the city are invited to call and examine our Stock and Prices. Orders by mail will receive prompt attention, and be supplied at the Lowest rates. Our Stock embraces FULL and COMPLETE LINES of all articles in the BOOK or STATIONERY TRADE, enabling dealers to make their entire bills at ONE HOUSE at the LOWEST RATES.

PARSONS PAPER COMPANY,

Holyoke, Mass., U. S. A.

CANDLESTICKS.

It is said that the candlesticks of the ancients were very ornate, and that those belonging to the temple worship were very large and many branched. The candlestick of the Hebrew Tabernacle was in the first chamber. A constantly burning light was a feature of most Eastern nations. A candlestick or lamp-stand was emblematic of the priest's office and was used in metaphor, at least, as an emblem of acceptable oblation, as in Revelation where rejection is intimated by the threat "I will come unto thee quickly and will remove thy candlestick out of his place unless thou repent." Candlesticks are mentioned in England in the reign of Edgar in the year 957.

In the earlier meaning of the word candlestick it was applied to any form of support on

venience so much as ornament. They gratify, particularly, a taste, which prevails among the wealthy and cultivated classes.

A leading style of candlestick has a cup with a scalloped edge, the cup being made in sections, each section being an imitation of a peacock's plumage. The material is bronze, finely polished and finished. A smaller lamp with the main features of this pattern is also made.

In another style the cup forms the base. The stick or candle-holder is held by two artistic braces resting on opposite edges of the cup.

Another style is provided with a cup-shaped base and a flat-shaped handle properly curved to give it a graceful form. The candlestick is of bronze, highly polished and engraved.

The engravings accompanying this article

without the addition of another drop of ink. The reservoir beneath the felt surface is covered with a heavy metal plate, sufficiently strong to resist the constant blows such a pad receives in large post-offices from morning until night, year after year. When more ink is needed it is obtained by a gentle pressure upon a brass-plate on the under-side. The reservoir has capacity for six ounces of ink which is enough to make hundreds of thousands of impressions with an ordinary stamp.

Both the automatic finger dampener and the automatic rubber-stamp pad have been tested during the past year by railroad and bank men, and the pad especially by post-office officials. The thorough trial given them has, it is said, shown that they are superior articles.

As soon as the finger dampener can be manufactured in sufficient quantity to supply the de-

which lights, whether candles or lamps were fixed, and so it happens that what would now be called a candelabrum is still sometimes spoken of from tradition as a candlestick. An instance of this kind is given in scripture where Moses is commanded to make a candlestick, for the tabernacle, of hammered gold, a talent in weight, and consisting of a base with a shaft rising out of it and six arms and with seven lamps supported on the summits of the six arms and central shaft.

When Solomon built the temple he placed in it ten golden candlesticks—five on the north and five on the south side of the holy place—but after the Babylonish captivity, the golden candlestick was again placed in the temple as it had been before in the tabernacle by Moses. On the destruction of Jerusalem by Titus it was carried with other spoils to Rome. Representations of the seven-branched candlestick as it is called occur on the arch of Titus, at Rome, and on antiquities found in the catacombs at Rome.

The primitive form of a candlestick was a torch made of slips of bark, vine-tendrils, or wood, dipped in wax or tallow, tied together and held in the hand by the lower end, such as are frequently figured on ancient painted vases. The next step was to attach them to a cup to catch the dripping wax or tallow.

The general use of candlesticks disappeared years ago with the introduction of gas and kerosene oil. But candlesticks made of expensive material in all sorts of antique patterns are still more or less in demand by the trade in fancy hardware. They are not used for con-

were kindly furnished by Hall, Nicoll & Granbery, 20 John street.

NEW SPECIALTIES.

McVoy's Automatic Finger Dampener and McVoy's Automatic Pad for inking rubber stamps are both manufactured under the same patent, and are said to be articles of more than ordinary merit. The finger dampener will be a great boon to all whose occupation is such as to require some method of dampening their fingers frequently, as bank-tellers, cashiers, ticket agents, and all who handle much money, paper or tickets. Only the best felt is used to retain the moisture, which can be regulated at will. The dampener is made of white metal, nickel plated, and sufficient water is contained in a reservoir beneath the pad to moisten it for several days' use. The form of the dampener is round, like a sponge cup, with the felt body in the centre, and is used in the same way as the ordinary sponge. It is made of metal, and there is no danger of its being broken. There is no chance of spilling water in case it is upset, as the water is contained in an air-tight chamber. As required from time to time, to keep the felt in proper condition, the water is supplied through a small tube, by gentle pressure of the fingers upon the felt cushion.

The automatic pad for inking rubber stamps comes in two patterns, one of iron and the other of brass or nickel. Every pad delivered is sent out in perfect working order, and guaranteed to make 10,000 perfect impressions

mand, it is expected to take the place of the glass-cup and sponge and become the "regulation dampener" in every bank. A prominent railroad official who has had one in use nearly a year writes: "It simply means a trial to secure permanent acceptance and favor." An agent having charge of an important office on the Pennsylvania Railroad writes, saying: "I have had McVoy's finger dampener in use during the past year, and am free to commend it to all persons requiring such an article, as superior to the common sponge-cup or any other device with which I am acquainted." From a railroad office in New Jersey comes the following: "Ticket-agents who have once learned its usefulness would not dispense with it."

The Automatic Pad for inking rubber-stamps is neat to handle, not soiling the fingers; it is permanent in use; it gives fine, clear-cut impressions and is both satisfactory and economical. The exclusive agency for these goods has been given by the manufacturers to Alvah Bushnell, stationer, 324 Chestnut street, and 105 South Fourth street, Philadelphia, who has gained the reputation of pushing a few articles of merit in a successful way.

The umbrella fiend has finally been foiled, and that by the very simple scheme of applying an adjustable, detachable handle which, upon being withdrawn, locks the ribs, and are only unlocked by replacing the handle. No two handles fit the same umbrella. This plan appears to put an effectual stop to an industry that had grown to considerable proportions.

ORNAMENTAL CLOCKS.

The origin of the clock is involved in great obscurity. Notwithstanding the statements by many writers that clocks, which were called in the early ages "horologia," were in use as early as the ninth century, and that they were then invented by an archdeacon of Verona, named Pacificus. There appears to be no evidence that they were machines at all resembling those which have been in use for the last five or six centuries. But, it may be inferred from various allusions to "horologia," and to their striking spontaneously, which were made in the twelfth century, that genuine clocks existed then, although there was no description of one until the thirteenth century, when it appears that a "horologium" was sent by the Sultan of Egypt in 1232 to the Emperor Frederick II. It resembled the celestial globe in which the sun, moon, and planets moved, being impelled by weights and wheels so that they pointed out the hour of day and night with certainty. A clock was put up in a tower at Westminster with some great bells in 1288. The bells were sold, or rather, it is said, gambled away by Henry VIII. In 1292 one is mentioned in Canterbury Cathedral as costing £30, and another, at St. Albans, by R. Wallingford, the abbot, in 1326, is said to have been the most wonderful clock in all Europe at that time. It exhibited various astronomical phenomena. A description of one in Dover Castle, bearing the date 1348, was published by Admiral Smith, P.R.A.S., in 1851, and the clock itself was exhibited in the Scientific Exhibition of 1876.

An elegantly furnished apartment without a timepiece to correspond is incomplete and does not present that appearance of harmony so much desired, and so much looked for in a tastefully decorated room. In the selection of a clock there is latitude for the exercise of a refined and luxurious taste. As a mantel ornament there is nothing more appropriate than an elegant clock, and this is one reason why the designs in clocks have of late years grown so artistically ornamental, and why there is still a growing demand for anything novel and unique in this line. As wall ornaments, too, clocks in many elegant designs have been largely used within the past few seasons, but there is nothing more tasteful, refined or artistic than the mantel clock with its highly polished frame of porcelain and marble, decorated with gilt or bronze, or its frame of rich wood, tastefully carved and engraved. Two designs

of expensive mantel clocks are shown in the accompanying engravings. The larger figure represents a fancy marble clock inlaid with painted porcelain figures and with the accompanying side-pieces. Its shape is plain rather than fancy, to be sure, but it is a prevailing style in clocks, and the material and finish make it a very elegant ornament.

The smaller figure represents a smaller sized mantel of exactly the same style and finish as the larger clock, but without the accompanying side-pieces.

Thanks are due to Hall, Nicoll & Granbery,

of 20 John street, for the use of the engravings in this article.

WHISK-BROOM HOLDER.

No dining-room or bedroom should be without a good whisk and holder, placed in some

convenient position. A pretty and cheap mode for making the latter is as follows: Procure a large piece of cardboard or stiff pasteboard; $\frac{1}{4}$ yard Canton flannel, any desired shade; 1 yard satin ribbon, to match (2 inches wide); 1 yard quilled ribbon, to match, and some cretonne, or pretty print, to line back. For back cut cardboard 8 inches long, 7 inches broad at top, 5

inches broad at bottom. For front piece cut cardboard 5 inches long, 8 inches broad across top, 5 inches across bottom (round top of both pieces). Cut Canton flannel $\frac{1}{2}$ inch larger all around; cretonne lining same size. Make a stiff flour paste, completely damp one side of cardboard and put on lining; do same with the other side and put on Canton flannel, neatly turning over edge allowed for hem; after pasting it well, when dry, overstitch the two edges together (I mean the sides of front and back), commencing at bottom and continue up till top of front piece. Sew on your quilled ribbon around all edges, make a big flat bow of satin ribbon and attach a little to the upper left-hand corner of front piece, make pretty loop to hang up by, tie a bow to handle of whisk, and it is finished.

TOY BIRD.

A new toy is made in the form of a bird, which in a measure imitates the natural motions of a bird on the wing.

An arm or strip of spring metal, sustaining the bird, is firmly secured to the tail. The strip may be held by the hand, and is manipulated in such manner that it is caused to vibrate, rising and falling, carrying with it the bird, in which operation the wings alternately open and close, simulating the motions incident to flying. As the bird is connected by its tail with the spring-strip, its sweep is increased, and thus little effort of the hand is required to cause the desired effect. By shaking or agitating the strip, the motions of the bird may be varied and stiff uniformity of the vibrations prevented, whereby a more natural appearance of flying is presented.

THE ALBUM.

The current number of the German magazine *Daheim* contains a note on the origin of the word "album." The writer points out that in the middle ages the parchment in common use was of two kinds—the Spanish-Italian and the German-French—and that the main difference between these varieties lay in the method of their preparation.

The German-French could be written upon on both sides, while of the Spanish-Italian only the inner surface was available. The smooth, white side of this latter was called album, to distinguish it from the stained exterior and as the Spanish-Italian parchment, being stouter and cheaper than the other, was generally used for volumes intended as repositories for scraps and literary collections, the meaning of the word album broadened out into its modern signification.

Nothing has ever remained of any revolution but what was ripe in the conscience of the masses.

LAMPS.

Technically, a lamp is an apparatus in which to burn fluid combustible substances. Lamps are mostly intended for yielding light, but there are also special forms, the purpose of which is to afford highly concentrated heat in a convenient and portable form.

The substances used in lamps for lighting are of two kinds—fixed oils and fluid hydrocarbons, the last named being obtained from the distillation of bituminous shales, &c., in the form of petroleum and essential oils. These substances may be distinguished as mineral oils. Till very recently fixed oils were almost exclusively used for lamps, but since the introduction of the cheaper and more convenient mineral oils, in the second half of the nineteenth century, the use of fixed oils has steadily decreased in all parts of the world.

The qualities of a lamp are judged of by the brilliancy, steadiness and uniformity of light it yields in proportion to the quantity of oil it consumes; by the convenient position of the light in relation to the equal illumination of the space it has to light; by the form, portability of the lamp itself, and by the simplicity and economy of its construction, regard being had to efficiency. The chief points to consider in the structure of lamps are: 1. The means of supplying oil to the burner and of regulating that supply; 2. The form and arrangement of the wick or medium over which the flame is supported; 3. The regulation and control of the currents of air in the lamp, which support combustion; and 4. The position of the oil reservoir in relation to the dissemination of the light and the stability of the lamp itself.

The simple form which was used down to the end of the eighteenth century, and which, as a "cruse," continued in common use in Scotland till the middle of this century, illustrates the most elementary and imperfect arrangement of a lamp. Here, as in the lamps of antiquity, the oil vessel lies immediately behind the burning point of the wick with which the oil is

about level when the reservoir is full. The wick is a round, soft cord or fibrous mass. Such a lamp has no merit but simplicity. The light is thrown only forward and to the sides, the back being entirely in shadow. The wick being a round, solid mass, takes up oil equally at the centre and circumference, but to the outer edges of flame only is there any access of air, consequently combustion in the centre is imperfect,

resulting in a smoky, unsteady flame and a discharge into the atmosphere of the acrid products of destructive distillation. Further, as the level of the oil sinks in the reservoir, the wick has to feed the flame from a greater distance by mere capillary force, and the supply thus diminishing, the light decreases in proportion.

Since the time when inventors first began to

better the primitive lamp, just one hundred years ago, the improvements in lamp construction have been enormous. The forms and modifications of inventions bearing on lamps have been innumerable, and many excellent devices, which did good service, have been superseded by others simpler and more efficient.

The first improvements were in wicks and burners. In 1783, Leger, of Paris, devised a flat band or ribbon wick and burner, which produced a broad, thin flame, with no core, so that all parts of the oil supply were brought into intimate contact with the air and perfect combustion and a steady flame were secured. The deficiencies of the flat wick frame were that the light was comparatively thin and impoverished and that the parts of a room facing the thin ends of the flame were badly illuminated. To some extent those evils were overcome by the adoption of a curved form of burner, which in the end led up to the burner invented by Ami Argand, of Paris, and patented in England in 1784, which consisted of two concentric tubes or cylinders, between which the tubular wick was contained.

Though Athenæus states that the lamp was not an ancient invention in Greece, it came into general use there for domestic purposes by the fourth century, B. C., and no doubt had long before been employed for temples or other places where a permanent light was required. The commonest sort of domestic lamps were of terra-cotta, and of a flat shape with a hole or nozzle in the centre in which the wick burned. Decoration consisted almost always of a design in relief taken from mythology or legend, from objects of daily life or scenes, such as displays of gladiators or chariot races, from animals and

the chase. A lamp in the British Museum has a view of the interior of a Roman circus with spectators looking on at a chariot race. In other cases the lamp is made altogether of a fantastic shape, as in the form of an animal, a bull's head or a human foot. Naturally, color was excluded from the ornamentation, except in the form of a red or black glaze, which would resist the heat. The typical form of a hand-lamp was a combination of the flatness necessary for carrying steadily and remaining steady when set down, with the roundness evolved from the working in clay and characteristic of vessels in that material. In the bronze lamps this same type was retained, though the roundness was less in keeping with the metal. Fanciful shapes were equally common in bronze. The style of handle consisted of a ring for the forefinger and above it a kind of palmette for the hand to press on to keep the thumb steady. Instead of a palmette there was sometimes a crescent, no doubt in allusion to the moon.

Lamps used for suspension were mostly of bronze, and the decoration was necessarily on the under part so as to be seen from below. Of this, the best example is the lamp at Cortona, found there in 1840. It is set round with sixteen nozzles ornamented alternately with a siren and a satyr playing on a double flute. Another style of ancient hanging-lamp, when once filled, burned a whole year. The engravings presented herewith show some new designs in the most approved modern lamps.

The lamp with an upright, cylindrical body, ornamented with raised figures of a stork, is called the "Bohemian" lamp. The other two designs are what are known as "Barbotine" lamps, with raised flowers. These lamps are made of Longwy Faience, Kioto, China, Majolica, Dresden, Lustre, Gien, Barbotine, Sarreguemine, Choisy le Roi and other wares. They make very elegant parlor ornaments, even if not utilized for lighting purposes, as they are decorated with beautiful floral patterns painted in bright and delicate colors. For illustrations THE STATIONER is indebted to C. F. A. Hinrichs.

A new design in floral pins is an imitation of French flowers firmly attached to a bar which hinges upon a silver-plated pin in such a manner as to permit the flowers to rest in any desired position.

CARVING AND ENGRAVING UPON CRYSTAL AND WROUGHT GLASS.

The art of manufacturing crystal, of carving it and of engraving it, is of very high antiquity, for Pliny (Book xxxvi. chapter lxvi.) informs us that "sometimes glass is blown, sometimes made in a furnace, sometimes chiseled as silver is."

Leaving for a while antiquity and its rare vestiges, let us, making a rapid leap over the centuries, return to our own age, and notice what the processes are which are employed now.

The carving of crystal and glass has generally for its object the obtaining of ornaments in relief; it is obtained by means of four vertical grindstones which, employed one after another, are brought into play either by the foot of the workman or by steam.

The first of these grinders is made of iron, the second of grit-stone, the third of marl, and the fourth of cork.

On the iron wheel the workman throws, from time to time, sand which has been moistened by means of a sabot or of a small wooden bucket which is placed about the wheel, and which causes the water to fall drop by drop upon the sand.

This first, rough-hewing sort of process being completed, there is placed, instead of the iron wheel, a grinder of grit-stone, the less hard action of which gives an additional degree of perfection to the cutting. Then comes the wooden wheel, on which are thrown in rotation the sediment of the sand pulverized by the previous processes, emery, becoming gradually finer and finer, and last of all, pewter. The process is terminated either by means of the same wooden grinder, sprinkled with dry pewter, covered with woolen stuff, or by means of another grinder, made of cork.

The chiseling of the glass or crystal is obtained either by applying the process to smooth and lateral surfaces, or to the cylindrical part of the glass, or, it may be, on the *arête* of the wheels when put in motion.

This system of decoration requiring, as we see, a rather long process, and an inevitable loss of material, cut glasses could not be purchased under somewhat high prices, till a simple workman introduced a complete transformation into this branch of glass manufacture by the invention of molding.

A young workman of the name of Robinet, who was employed as a glass-blower in the manufactory of Baccarat, happening to have delicate lungs, and finding his strength diminishing to such an extent as to threaten his means of getting a livelihood, invented a pump which more than supplied the place of human strength. This invention, which dates from 1821, consists of a small cylinder made of tin or brass, from thirty to forty centimetres in length, by from six to eight in diameter, and closed by an end piece. In the interior of the cylinder is to be seen a spring on rollers made of iron, at its lower portion a wooden piston with an opening in the middle mounted with leather, and closed by a fastening *à baïonnette*. The mouth of the cylinder being thus placed in contact with the piston, the air is compressed with a strong pressure, and being held back within the cylinder and then forcibly

thrown out, it causes the material to penetrate into all the anfractuosités of the mold.

It is by this cheap and expeditious means that wine-glasses, decanters, &c., can be produced for a very low price, their ornamentation usually being what are technically called "slices of melon," or *quadrillés*. These glasses, though made in a mold, can be tooled by the crystal cutter.

This invention, known now as the Robinet pump, is doubly valuable, from a philanthropic and from an industrial point of view. It obtained for its inventor a gold medal from the Société d'Encouragement, and a pension secured to him by the municipality of Baccarat.

ENGRAVING UPON CRYSTAL AND GLASS.

Although engraving upon glass produces a result totally opposite to what cutting does, because the former is made on the hollow surface, while the latter, as we have just shown, seldom produces anything besides ornaments in relief, the modes of execution offer at the same time a rather strange resemblance, for both are produced by *turning*, with certain differences which we are about to mention.

In place of the wheels, which in cutting glass wear out and consume the material, the grain- ing is obtained by the help of a pin, which, terminated either by a point of tempered steel or by a piece of flint, is adjusted to a kind of small barrel set in motion by a lathe. The motion once given, the workman takes the object which he wishes to grave, and following the outlines of the pattern, he leans more or less hard upon the point of the pin, according as he wishes the engraving to be more or less deep.

The difficulties of this process, which, as one may easily believe, requires great lightness of touch in combination with great practice, can only be appreciated when one examines carefully those works on which the artist has been able to engrave, with great delicacy and in a small space, the most complicated landscapes and other subjects.

We may quote what M. Labarte says on this subject:

"About the commencement of the seventeenth century, there had been set forth from certain glass manufactories of Bohemia vases of a correct form, and enriched with ornaments, with subjects, and above all with engraved portraits.

"Distinguished artists in Germany and Italy were employed, notwithstanding the fragility of the material in decorating these vases, in imitation of those in rock crystal, with ornaments, with arabesques, and with subjects in intaglio, remarkable for their composition, the purity of the design, and the finish of the execution. These pretty engravings would often have merited being fixed upon a subject less fragile."

While perfectly agreeing with what is here stated respecting the beauty of these designs we must own that there is a certain degree of monotony in them . . . We have seen that with regard to cut glass, industry has discovered a process of popularizing them by means of a preliminary blowing; well engraved glazed glass has also its imitation, and the process employed is thus described by M. Peligot:—

"For the purpose of engraving on glass,

fluorhydric acid, either in the gaseous or the liquid state. It is perhaps preferable to employ it in the last-named form.

"The fluorhydric acid is prepared by the ordinary processes, by leaden retort, a portion of powdered flowers of calcium, and three portions and a half of concentrated sulphuric acid. The acid is mixed with half or a third part of its own weight in water and is kept in a bottle made of lead, or still better, of gutta-percha. The glass is coated with a varnish of wax and turpentine, applied hot with the aid of a brush. For designs intended to be especially fine, siccative oil of linseed is employed.

"The design is traced out with a point, as with engravings, in aquafortis. The transparency of the linseed-oil varnish renders it easy to reverse the tracing. The portion that has been varnished is then surrounded by a waxed pad, and the acid is caused to bite the glass for a longer or shorter time according to the depth of the intaglio. It is then washed, first with water, and then with essence or with alcohol, to remove the varnish.

"Of course the glass is only attacked in the portions which have been laid open by the graving tool."

As it is quite impossible, however carefully this chemical process may be performed, for every part into which the acid has bitten to have the neatness and perfect finish which can alone be imparted by the point of the tool, it will always be easy to distinguish the results of hand-labor from those articles which are thrown off by machinery. —*The Pottery Gazette from the "Verrerie," of A. Sauzay.*

To give a gold-color to brass castings dissolve one pound and a half of caustic soda and one pound and a quarter of milk sugar in a quart of water and boil for a quarter of an hour. The solution is at first quite clear but soon assumes a dark yellow color. The vessel is then taken from the fire and a pound and a quarter of cold concentrated solution of blue vitriol is stirred in. A red precipitate of suboxide of copper is at once formed. A suitable wooden sieve is placed in the vessel, and on this the polished articles are laid. In about one minute the sieve is lifted up to see how far the operation has gone, and at the end of the second minute the golden color is dark enough. The sieve and articles are now taken out, and the latter are washed and dried in sawdust. If the brass is left longer in the copper solution, in a short time a fine green lustre is produced, becoming yellow at first and then bluish green. After it turns green, then the well-known iridescent colors finally appear. To obtain uniform colors it is necessary that they be produced slowly, which is attained at temperatures between 135° and 170° Fahr. If the rinsed and pickled brasses are dipped for five minutes in a 3 per cent. neutral solution of cocoanut oil soap, and then washed with water again before they dry, the coating gains in permanence. Brass articles that have to be cleaned frequently should be covered with oil of turpentine, or thin English copal varnish.

Thought is the property of him who can entertain it, and of him who can adequately place it. [Emerson.]

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

COMBINATION COPY-PRESS STAND.

We are not told whether Adam had his boots blacked for him or whether he blacked his own, but a large proportion of his present successors are compelled to black their own; and any ap-

COMBINATION COPY-PRESS STAND.

pliance which will reduce the labor of the operation, in even a slight degree, will be appreciated by not only the readers of THE STATIONER, but the public generally.

Office room is valuable, and an additional piece of furniture difficult often to find room for, and on this account and also its general utility, there is opportunity for the combined copy-press stand and blacking-case, just introduced by Samuel C. Tatum & Co., of Cincinnati, and illustrated herewith. The upperpart

of the stand has all of the conveniences of the copying-press stand, while the lower drawer, which contains the fixtures for blacking boots, can be closed up when not in use quite as readily as any ordinary drawer. Tatum's copying-presses were awarded the first premium at the Chicago Railway Exposition, and may now be seen all over the land.

"ACME" STAMP MOISTENER.

Herewith is given an illustration of the "Acme" Stamp and Label Moistener and Mailing Machine, an invention which will be found very useful for attaching stamps to envelopes or labels, &c., to packages. It can be used as a mailing machine for addressing newspapers (the names having been previously printed on gummed paper), and also for moistening the flanges of envelopes prior to sealing, or for any of the varied purposes for which such a machine might be desirable. The low price at which it is sold, its simplicity, cleanli-

ness and rapidity are sufficient to introduce it to popular favor.

It is always ready for use, and moistens the stamp, label, &c., just sufficiently to insure its adhesion, and the annoyance caused by using a wet sponge or the more complicated machine for the same purpose, is avoided.

The attachment will be found very convenient when the machine is to be used as a mailing machine, the names having been previously printed on gummed paper, and the swivel serving as a reel on which to wind strips of stamps, labels, &c., thus keeping the whole apparatus in one box, ready for use at a moment's notice. It is for sale by J. B. Lippincott & Co., Philadelphia.

CARD RECEIVER AND BOUQUET HOLDER.

The engraving represents a combination card receiver and bouquet holder. The article is made of bronze, highly polished. The bouquet vase is of cut glass, ornamented with flowers, ground into the surface. The owls swing naturally, as if resting on the branches of a tree, gently swayed by a summer's breeze. It is one of the most novel designs in card receivers that has lately been introduced.

NEW PATENTS.

No. 284,638. Type-Planer.—Chas. H. Jones, Chicago, Ill.

A type-planer having a concavo-convex or segmental shape, with a plane facing of elastic material on its convex side, held thereon by binding-strips and provided with a handle placed longitudinally and centrally from end to end of said planer.

"ACME" STAMP MOISTENER.

No. 284,659. Manufacture of Imitation Stained Glass.—Eugene E. Oudin, New York, N. Y.

No. 284,665. Paper-Ruling Machine.—Edwin J. Piper, Springfield, Mass.

No. 284,706. Tag-Fastener.—Moses Alshuler, Mattoon, Ill.

No. 284,737. Postage-Stamp Holder.—Isaac W. Hey-singer, Philadelphia, Pa.

No. 284,753. Roll Paper Cutting Machine.—G. Munroe, Troy, N. Y.

No. 284,755. Calculating Machine.—Charles F. Pidgin and Francis H. Leonard, Jr., Boston, Mass.

In an electro-magnetic calculating and adding machine, an automatic electric carrying device, whereby the figures of one arithmetical denomination are automatically carried to the next.

No. 284,757. Stereotype Block.—Edwin E. Pratt, Chicago, Ill., assignor to A. N. Kellogg Newspaper Company, of Illinois.

No. 284,771. Coating Articles in Imitation of Moss-Bark.—Ottomar Speisser, New York, N. Y.

No. 284,773. Coupon Clipper.—Wm. F. Stark, New York, N. Y.

No. 284,791. Fastening for Closing Purses.—Arthur Alexandre, Paris, France.

A frame for purses, pouches and the like, consisting of bows hinged together and provided with projections and cavities near their ends to hold the bows locked together.

No. 284,857. Letter-Box.—Joseph W. Jeffers, Baltimore, Md.

CARD RECEIVER AND BOUQUET HOLDER.

No. 284,880. Marble-Playing Board.—Edward W. A. Meyer, Boston, Mass.

A game-board inclined from both ends to a transverse line between the ends, and having on one end a series of partitions arranged edgewise to form marble-pockets, whereby marbles may be rolled over the table and made to reach different pockets.

No. 284,901. Indicator for Type-Writers or Caligraphs.—John W. Rich, Mechanicsburg, Pa.

A scale for a type-writer or caligraph, provided with a series of indices adapted to be set so as to

determine the point or points in a line at which a character or series of characters are to be struck or printed.

No. 284,911. Eyeletting Machine.—Alfred J. Shipley, Waterbury, Conn., assignor to the Scoville Manufacturing Company, same place.

No. 285,337. Machine for Sealing Newspapers.—James H. Woodard, Indianapolis, Ind., assignor of one-half to Joseph W. Sherwood, same place.

A machine for sealing the free edges of folded papers, consisting of the following elements: A main frame, a table mounted on said frame, means for sliding a folded newspaper horizontally on said table, means for feeding at regular intervals a narrow strip of paper from a continuous roll in front of the advancing edge of said newspaper, means for applying paste to one side of said strip of paper, means for cutting successive portions from said strip, and means for folding said cut portion over the edges of and pressing it upon the newspaper.

No. 285,354. Toy.—William R. Fowler, Philadelphia, Pa., assignor of one-half to C. Lawrence Perkins, New York, N. Y.

No. 285,357. Wheel for Advertising.—Charles W. Hamill, Baltimore, Md.

No. 285,368. Toy Gun.—Peter J. Trieller, Milwaukee, Wis., assignor to A. Meinecke & Son, same place.

No. 285,370. Seal for Newspapers.—James H. Woodard, Indianapolis, Ind., assignor of one-half to Joseph W. Sherwood, same place.

The combination, with a newspaper or other folded periodical publication, of a seal consisting of a separate and independent strip of paper having a distinctive mark thereon, and folded over and secured upon the free edges of said publication.

No. 285,392. Machine for Making Paper Bags.—Clarence A. Chandler, East Bridgewater, Mass.

No. 285,396. Game Apparatus for Playing Parlor Quoits.—Heyliger Adams de Windt, Chicago, Ill.

A game-board having means for supporting the same in an inclined position, and having an opening through which an object may be tossed.

No. 285,398. Paper-Holder.—Benjamin F. Eaton, Coxsack, N. Y., assignor, by mesne assignments, to the Union Cabinet and Paper Company, Boston, Mass.

No. 285,421. Printing Press.—Charles D. Lloyd, Framingham, Mass.

No. 285,423. Decorated Frame, Pedestal, Vase, &c.—Riverius Marsh, New Brunswick, N. J.

A pedestal, column, frame, or vase made of

IMPROVED WIRE STITCHING MACHINE.

glass or other transparent material, having depressions in the outer surface, in combination with inside and outside decorations, consisting of lithographic or colored prints, paper, colors, or scrap or transfer pictures, such outside decorations being pasted or fastened in the depressions.

No. 285,438. Easel.—Bert Smiley, Kalamazoo, Mich.

No. 285,442. Movable Outline Drawing and Design.—Morgan J. Sweeney, New York, N. Y., assignor to John and Edmund McLoughlin, both of the same place.

No. 285,448. Doll.—Martha L. Wellington, Brookline, Mass.

As a new article of manufacture, a doll constructed of a wire frame bent into the contour of the head, face and neck, said frame covered with stockinet, stuffed, painted and sewed.

No. 285,456. Paper Box.—August Brehmer, Leipsic, Germany.

DESIGNS.

No. 14,255. Font of Printing Type.—Wm. W. Jackson, Philadelphia, Pa., assignor to MacKellar, Smith & Jordan, same place. Term of patent, 14 years.

IMPROVED WIRE STITCHING MACHINE

The accompanying engraving shows an improved automatic wire stitching machine for binding pamphlets, pass books, copy-books, fastening calendars, sample cards, samples, &c., and manufacturing various articles. The machine is light and portable, and is said to do its work quickly, well and cheaply, thereby saving both time and money. It cuts, feeds, forms, drives and clinches the staple in one operation. The wire is fed from a spool, which is shown in the cut. It will, moreover, fasten from two sheets of the finest tissue-paper to a pamphlet of over 200 pages of fifty-pound calendered book paper. A boy can insert from 8,000 to 12,000 staples in a day, according to the character of the work.

The machine is made with a saddle table for binding in the fold, also adjustable platform for flat work. The latter is indicated in the engraving by dotted lines.

The work done by this machine has a neat and finished appearance, the ends of the staple curving in, leaving no marks or disfigurements. Wire being stronger than thread, and this method of binding being so much cheaper, these machines will be found invaluable in every establishment. Staples may be inserted eight inches from the edge of the work. The saddle table may be lengthened out to eleven inches by extension pieces, which may be readily adjusted at each end, making a suitable support for the work.

The machine is finished in nickel-plate and japan, and the wearing parts are of hardened metal.

A novelty in pocket-books is the "Shell" pocket-book. Its sides are shells. It has a hinge clasp and a chain made of white metal, resembling silver. The shells are in many delicate tints.

Among the latest novelties in the trade is a work-box of polished wood. It is rectangular in shape, with hardwood moldings and marquetry ornamentations, in

imitation of inlaid woods, a style greatly admired. It has compartments for thread, spools, pins, scissors, &c., and also contains drawers for various other articles, such as note-paper, envelopes, pencils, &c.

A novelty in inkstands is of hammered bronze. The bottles are cut-glass with prism-shaped furrows; a design in leaves forms a handsome pen rack in the centre, while the top of the stand is ornamented with a spray of leaves and daisies; another style is of polished bronze with a pen box in the centre and pen rack and sponge holder in front.

A wall-pocket recently seen has a gilt frame terminating in a Gothic top. The body of the pocket is of maroon plush, across which, extending from the left-hand lower corner, is a branch of moss rosebuds worked in pink ribbon, with shaded chenille for leaves, and tied at the lower corner with a salmon satin bow. The lining was a silk to correspond.

NEW GOODS, JULY 1, 1883.

We desire to call attention of the TRADE to our Lines of NEW GOODS designated as

"YE KNICKERBOCKER" TABLETS.**WATER COLOR BLOCKS.**

THESE goods are intended for practice and studies, and are made from carefully prepared paper, substantially bound with extra heavy backs, and furnished at the following reasonable prices:

No.	SIZE.	PER 100 BLOCKS.
396	5½ x 7½ ins.,	\$20.00
397	7½ x 11 "	35.00
398	11 x 15 "	60.00

"YE KNICKERBOCKER" BLOTTER TABLET,*Ruled and Plain.*

THESE goods are intended to meet the want of a low priced Blotter Tablet, and are made in the same style as our American Blotter Tablet, with the accompanying design printed on neat, tinted, antique covers. They are made from a fine quality of laid paper, ruled on both sides, or plain, and put up in our usual attractive style in packages of ten tablets.

For Educational purposes they have no equal.

No.	SIZE.	PER 100 TABLETS.
372	5 x 8 ins., Commercial Note,	\$15.00
375	5½ x 9 " Packet Note,	18.00
378	8 x 10 " Congress Letter,	30.00

"YE KNICKERBOCKER" DRAWING TABLET.

THESE Tablets have been prepared from a fine grade of Drawing Paper, suitable for the use of Artists and the more advanced class of Art Students.

No.	SIZE.	PER 100 TABLETS.
390	4½ x 7 ins., 32 sheets,	\$10.00
92	5½ x 9 " "	15.00

**PERFECT PENCIL DRAWING TABLETS.**

WE have also a line of cheaper grade of Drawing Paper for practice in schools and sketching purposes. These are made of White and Buff paper in two sizes.

No.	SIZE.	PER 100 TABLETS
186	4½ x 7 ins.,	\$5.00
192	5½ x 9 "	10.00

"YE KNICKERBOCKER" PERFORATED TABLET,*For Pen and Pencil Use.*

THIS is a low priced Scratch Pad, made from a well-sized book paper, with Antique Card Board Cover, printed with the accompanying design, and is the neatest Perforated Scratch Pad in the market Made in FIVE sizes, as follows:

No.	SIZE.	PER 100 TABLETS.
380	2¾ x 4½ ins.,	\$3.00
380	2¾ x 4½ " for Cash Checks,	3.00
382	3½ x 6 "	4.50
384	4 x 7 "	6.00
386	4¾ x 8 "	8.00
388	5½ x 9 "	10.00

THE BROWN & CARVER

Improved Paper-Cutting Machines.

The attention of Buyers is called

To the Following Points:

Superior manner of hanging and adjusting knife bar, thus relieving head of machine frame from undue strain during the cut, and allowing easy and accurate adjustment of knife from either end.

The machine table is fixed so as to prevent sheets of paper becoming wedged between bottom of gauge and table.

With this paper-cutter you can cut to the last half-inch, effecting saving in paper, and also cut two widths at once.

The perfect position of clamp-wheel enables operator to clamp stock rapidly and without stopping.

The simplicity of this machine is remarkable; there are no traps or springs of any kind, and all parts are easily accessible.

Noisless friction clutch for starting and stopping the machine easily and without jar is one of the great qualities of this cutter; it gives a greatly increased speed without endangering the machine.

On all of the accompanying Claims we defy Competition.

Soliciting your orders, we feel confident of the ability of this machine to give perfect satisfaction in every particular. After using it once every one will be convinced of its merits. For Sizes and Prices, address

C. R. CARVER, Successor to BROWN & CARVER,

1022 Hunter Street, Philadelphia, Pa., and 33 Beekman Street, New York.

NEW YORK OFFICE, . ROOM 69, TEMPLE COURT.

T. SINCLAIR & SON,

ESTABLISHED OVER FORTY YEARS,

LITHOGRAPHERS AND PUBLISHERS OF

ADVERTISING SPECIALTIES FOR THE TRADE.

THE LARGEST HOUSE AND MOST EXTENSIVE LINE IN THE WORLD.

OUR LIST EMBRACES THE FOLLOWING:

FINE CHROMO CARDS,

CHEAP PICTURE CARDS,

FOLDING CARDS AND PROGRAMMES,

COTTAGE CHROMOS,

SERIAL FOLDING CARDS,

ADVERTISING BLOTTERS,

PATENT SELF-SUPPORTING CARDS,

PATENT SHAPE NOVELTIES, ETC.

NEW PATENT DESIGNS AND COPYRIGHTED NOVELTIES NOW READY.

IN ANSWER TO REQUESTS FOR CATALOGUE AND SAMPLES OF OUR PUBLICATIONS, WE WOULD SAY: WE DO NOT ISSUE A DESCRIPTIVE CATALOGUE OF OUR PRODUCTIONS OR SEND OUR PRICE-LISTS TO BUYERS, EXCEPTING THOSE ORDERING IN QUANTITIES AS FOLLOWS:

25,000 LOTS OF CARDS COSTING NOT OVER \$1.25 PER THOUSAND.

15,000 " " " 2.50 "

10,000 " " " 2.50 " AND OVER.

5,000 LOTS OF ADVERTISING BLOTTERS.

1,000 LOTS OF SHAPE NOVELTIES, COTTAGE CHROMOS AND FOLDERS.

THESE QUANTITIES REFER TO LOTS OF ONE NUMBER.

PARTIES WHO THINK THEIR PURCHASES WILL REACH THE ABOVE-NAMED QUANTITIES, WE WILL BE PLEASED TO SELL, AND WILL FURNISH A COMPLETE LINE OF OUR SAMPLES (NEARLY 1 M. DESIGNS,) ON RECEIPT OF \$3.00, WHICH WILL BE DEDUCTED FROM FIRST ORDER OF \$50.00 OR OVER.

HUNDREDS OF NEW DESIGNS IN CARDS. JOBBERS IN PRINTERS' SUPPLIES SHOULD SEND FOR SAMPLES.

DEALERS SHOULD INSIST ON BEING SHOWN "SINCLAIR'S" CARDS AND NOVELTIES.

Correspondence.

LOUISVILLE LOUNGES.

FROM OUR REGULAR CORRESPONDENT.

LOUISVILLE, Ky., November 1, 1883.

The weather during October was variable, but in the main mild and seasonable, with a heavy rainfall. The damage by the drought which prevailed through August and September was in a measure neutralized by the good farming season offered in the past month. Only few localities in this section have had a killing frost this fall, and grass and flowers are still bright and vigorous. A very light acreage of winter-wheat has so far been sown. The tobacco crop is about all housed in good order, and safe from frost. The tobacco market is reported to be in a strong statistical position, and even a higher range of prices than last year is expected. Live-stock interests are represented as flourishing. So much for the situation in agricultural circles on which business so greatly depends. Collections in Kentucky and Indiana are said to be good; farther south a light yield of cotton is complained of, and although the movement at present is brisk, some look for a stringency of resources later in the season there.

Business in Louisville keeps up briskly in nearly all branches. The rush is over, it is true, but the volume of sales is larger than usual at this period of the year. Jobbers report a continued large number of visitors in the market, and salesmen in the country are sending in an encouraging amount of replenishing orders. General manufactures are fairly active, with here and there a complaint about light margins.

The book trade here is and has been good, the stationery trade lively, blank-books in steady demand, printing and engraving unprecedentedly active, and the jobbing paper trade consequently spirited.

The Southern Exposition is running along merrily on its successful course, and will close its one hundred days' career on the 10th inst. The displays are large, the attendance is liberal, its effect on business here extremely gratifying, and its importance to the industrial and commercial interests of the whole South certainly great.

Among the displays not previously noticed in *THE STATIONER*, and in which your readers may feel an interest, are the following: The *Courier-Journal* Job Printing Company has two separate displays—one devoted to samples of blank-books and bookbinding, the other in the machinery department, giving a practical exhibition of its method of printing, binding and folding. The "Old Berkshire Linen Ledger Paper" is the stock used in its blank-books. The exhibit is first-class in all features.

The Louisville Lithographing Company presents a variety of specimens of superior work, tastefully arranged in suitable frames. This company makes a specialty of colored labels, show-cards, and fine commercial lithography, and employs over seventy skilled artists and workmen in executing orders.

The Falls City Job Printing and Lithographing Company makes a pleasing and varied display of samples in all departments of the art, and contributes its share toward giving Louisville a reputation for good work in this line.

The Kentucky Institute for the Education of the Blind has a very large and interesting exhibit composed of books, maps and other products of the institution. The face and bust of Laura Bridgman, who, though born deaf, dumb and blind, was, by skillful teaching, enabled to read, write and converse, and who was made famous by Dickens' sketch, is a notable feature of this interesting collection.

Lockwood De Forest, of New York makes a unique display of East India goods in the way of costly hand-carved wood and metal decorative features. The engraving shows surprising skill and taste, and the wares are in many respects extraordinarily fine.

Next to it is the space of the Williamson Art Metal Works of this city. For high-class work in the way of etching and household decorative art, from the tiny plaque to the elaborate mantel, this is unqualifiedly perfection in every detail.

J. V. Escott & Sons have an exhibit in the southeast gallery which includes a fine collection of plaques, frames, artists' materials, art furniture, &c., manufactured or handled by the house.

E. Remington & Sons, Ilion, N. Y., have an attractive and interesting display of type-writers, fire-arms and other implements, for which the firm is noted.

American lithographic stone, a product of Overton County, Tenn., is placed on exhibition by N. O. Geoghegan, of this city, in a variety of good samples.

The display of printing machinery is meagre, and is probably the only department of the great exposition materially below what it should have been, in any class of modern inventions.

A New Yorker, who is a competent judge and a competitor for trade, authorizes the statement that the exhibits of blank-books made by Louisville factories show a quality of workmanship unsurpassed anywhere in this country. In my next letter I will report the awards made by the judges of the Exposition in those department of interest to your readers.

John P. Morton & Co., publishers, issued yesterday "The Valley of Unrest," with the subtitle, "A Book without a Woman, Dedicated to a Woman." The work is, in all respects, an oddity as well as a novelty; nearly a quarto in size, printed on heavy terra-cotta paper, covers of the same material, the whole is bound or corded together by a blue silken ribbon. The leaves are printed only on one side, the ancient elongated S instead of the modern being used; edges untrimmed. The publishers have made it a paragon of fine workmanship, unique and attractive, and for various reasons a large sale is predicted. The author is Douglass Sherley, of this city, a young man of wealth and scholarly attainments, and the verdict of critics will be watched with interest.

Among recent trade visitors were Messrs. James, of Daniel Slote & Co.; Pike, of M. A. Reay; Morton, of Hard & Parsons; F. E. Hafely, of E. & J. B. Young & Co.; Jno. Macdonald, of Brown & Sanson; Dudley H. Putnam, of Geo. B. Hurd & Co.; E. C. Whitney, of Lewis Pattberg & Brothers; W. J. Kelly, of McLoughlin Brothers, and Val. Koch, of Koch, Sons & Co.

J. J. Kittel, of New York and Dresden, the

great queensware and art pottery importer, is in the city visiting the Exposition. He was entertained by Ben. Bayless at the Pendennis Club at dinner yesterday.

As a pointer showing the activity of business here it may be mentioned that the Clearing-house exchanges for the expired ten months of 1883 were \$349,000,000—against \$322,000,000 and \$326,000,000, respectively, for the same period in 1882 and 1881. The clearings for the month of October, 1883, were \$41,000,000, as against \$33,000,000 for October, 1882. The revenue collections for this district last month were \$700,000.

The outlook is for a well-supported general fall and winter trade, including a good holiday season.

BOURBON.

PHILADELPHIA ITEMS OF TRADE.

[FROM OUR REGULAR CORRESPONDENT.]

PHILADELPHIA OFFICE OF THE LOCKWOOD PRESS, }
150 South Fourth Street,
PHILADELPHIA, Nov. 5, 1883.

Trade, which at the beginning of the season was of a kind not altogether satisfactory, is now in good shape and active. We shall have, therefore, a good showing for the end of the year, and shall make up to some extent for the unfilled hopes of last spring.

Prices generally do not show an advance, but they are firm, without prospect of a decline. Paper is steady at last summer's prices, and it would be altogether impossible to make a contract with some of the mills at anything under current quotations. This feature is remarked in all of the staple articles. The solidity of the market, upon the basis of relatively low price is good for buyers who can act without fear of a decline in values, or of speculation which is so invariably discouraging to business.

J. B. Lippincott & Co. find a strong run on their enormous stock of imported merchandise and get satisfactory prices. The stationery department of this excellent house, which has been for a long time one of the most important of its divisions, has developed greatly during the past year, so much, indeed, that the firm has been obliged to devote more room to it, and now half of the vast premises occupied by J. B. Lippincott & Co., is devoted to the stationery trade, which it is said will be more extended next season.

Charles J. Cohen is pretty nearly in the same situation as Lippincott & Co. as regards the increasing business. These two houses share about equally in the business of the Middle States. Charles J. Cohen, who devotes his whole time and resources to the stationery trade, is an excellent manager, and sells goods at the lowest price possible consistent with profit. He also manufactures envelopes which he is able to offer at surprisingly low prices. His fancy-goods department is one of the objects of his particular care, and he has been able to present to the trade since his trip to Europe last year, when he made special arrangements with leading manufacturers, some of the finest lines of imported goods which have been shown in this country, and at one step he has put himself at the head of this class of trade, making his house the equal of the largest in the same lines.

A. M. Collins, Son & Co. report satisfactory

business, and their great facilities for production enable them to meet with ease the demands of their trade. The sales of cards and card-boards which in the beginning of the season were rather slack, have become active, and are now in full quantities.

J. G. Ditman, of the firm of J. G. Ditman & Co., has altogether recovered from the attack of typhoid fever which threatened his life. To the great satisfaction of his numerous friends, he has been able to return to business, where everybody is glad to see him, particularly when the season is all activity.

As has been announced in *THE STATIONER*, the firm of Janentzky & Co. has changed its style to Janentzky & Weber. Mr. Weber, who has borne an important part in establishing the prosperity of the house, is well liked by all who know him and who are very glad to see his name in the firm. This change will not fail to increase the success of the house.

William Mann, who has established such a great reputation for his copying-papers and books, is satisfied with the trade situation, and is increasing his business. His specialty has become an important feature in the trade because of the excellent goods supplied by him, and in this fact lies his success.

J. L. Shoemaker & Co. manufacturers and importers of bookbinders' materials, are very much encouraged with the present condition, and outlook of trade in their line. Their October sales exceeded those of October, 1882, at least 20 per cent., and the same activity continues. They say, however, that collections are quite slow, and some good houses, which have always been very prompt in their payments, have a tendency to take more time. Their factory is running on full time, and they are producing goods which compare favorably with any in the market. They spare no pains to make the best goods, and are meeting with success. It is reported that their travelers, both East and West, are doing exceedingly well. J. VIENNOT.

SHAWMUT SHAVINGS.

[FROM OUR REGULAR CORRESPONDENT.]

Boston, November 5, 1883.

Boston has long enjoyed the proud distinction of being styled the "Athens of America." Harvard College, free public libraries, and numerous city schools all lend an influence to the cause of letters. In such a community it is not at all surprising that so many should be found engaged in the educational arts and their kindred industries. That art which makes the dissemination of knowledge possible has made much wonderful progress since Benjamin Franklin issued his tiny paper some hundred years ago. Then the city had only one printer, and Franklin had a monopoly of the business, dead-headed all the shows, saved his money, and left a volume of advice for the guidance of his followers. His followers have been thousands, but those who have taken his advice have been very few. Printers are now as many as the sands along the seashore, and the margin of profits in the trade is so small that the advice of Greeley to young men seems specially given to this class. The business is not as flourishing as it once was; not but what there is more of it, but because competition is so great. Hardly a job is given out that is not

estimated upon by a dozen, and the lowest printer does the work. Only the best equipped offices, those utilizing all of the late improvements and labor-saving devices, stand any show for work, and even these must keep drummers in the field looking up work to keep the offices going. This is the state of affairs with the average job printer. With large book publishers the situation is different. Capital sustains the business, while the hundreds of thousands of readers throughout the country pay interest on the investment.

Of first-class publishing houses Boston has several, and their productions will compare most favorably with any in the country. One of these, James R. Osgood & Co., is known the world over, its publications being always in ready demand. The holiday books issued by this house every year are anxiously looked for by the trade. "Lucille," published two years ago for the Christmas trade, had a circulation of more than 8,000 copies. Last year the house brought out "Lady of the Lake," which became quite popular, reaching a sale of 10,000 copies. For the holiday trade this year is "The Princess," by Tennyson, with over a hundred beautiful illustrations by leading American artists; also a work by John L. Stoddard, the famous lecturer, entitled "Red-Letter Days Abroad," which will be found very profusely illustrated. The first edition of this work will be five thousand copies. In about two weeks the trade will receive a new novel by Blanche W. Howard, published by this house, bearing the odd title of "Quenn." These holiday books bear evidence of true artistic taste. The covers are specially designed for each work, and the bindings are elegant.

In the manufacture of blank-books Boston holds her own. The business is divided up mostly among the stationers, all of whom endeavor to supply their own trade with their own production. Very few of the stationers, however, have facilities for doing the entire work. Some send out the paper to be ruled and paged, some send the paper out to be bound, while others have all the work done by outside book-makers and stamp the article as their own make. The best months for jobbing goods in this line are September, October, and November. It might interest some to know just about how many tons of paper are consumed in a year in the manufacture of blank-books, but there is no ready means of finding out. Winkley, Thorp & Dresser consume about half a ton a day, and they do as large a business of this kind as any house in the city, having every possible convenience and facility for doing every branch of blank-book manufacturing. Stock is being constantly made up, and a large stock is always on hand for wholesale orders. This is a very progressive house and it is often found reaching out for something a little ahead of its neighbor. Some two years ago this house decided to manufacture scrap albums for the trade, and some old veteran in the business here predicted a failure because they thought it ruinous to compete with New York manufacturers. But the venture proved a decided success. The styles put out by this firm were even copied by manufacturers in New York, because they took so well with the trade. For the coming holiday trade this firm

is out with four new specially designed styles, and though a little late in the season, the trade are being supplied as rapidly as the books are manufactured. All of the four covers were designed by D. F. Kendrick, being taken from life and are really the most artistic productions ever seen on a scrap-book. The designs were reproduced by a Boston lithographer, and embossed by Winkley, Thorp and Dresser. Samples of these "Ideal" scrap albums have been shown in New York, and they are highly commended by the trade there. The firm, of course, feels a just pride in the success of this new venture, and promises a little progressiveness in other lines of the trade ere long.

Color printers are just as busy as they can be—plenty of work, but very little profit. One of the largest concerns for doing color-work in the city is the Forbes Lithograph Printing Company and its work is known everywhere. Gunn, Curtis & Co. also do a very large business in this line. In years past these two firms did about all the work of this kind done here, did it very satisfactorily also, and made money in the business. But a few years ago an inquisitive newspaper man got on to the business and wrote it up, describing the process, the amount of work done yearly and the profits thereof. This account caught the eyes of some New York lithographers, who sent drummers here to solicit a share of the work. Prices were cut and then cut again until now very little margin is left. Other local firms are also in the field, and the competition is as great in this business as in most others. Competition, it is said, is the life of trade, but it kills a good deal of it.

The trade in printers' ink is reported as being good, both in local demand and for country shipment. The largest manufacturers in this section are George H. Morrill & Co., their works being located in Norwood, Mass. Three and four tons a day of black ink is the average production of the Norwood works. Inks of all grades and colors for printers and lithographers' use are manufactured by this house, and they are recognized by the trade as standard goods, being fully equal to any in the market. Writing inks of all colors are made here, those bearing the brand of Maynard & Noyes holding a very large share of the trade. This house has just lately started into the manufacture of mucilage, and is meeting with much encouragement.

The demand for cards is increasing. Cards are now designed for all occasions and millions are annually sold. It is predicted by some that the "card fever" will die out in a few years, but the large publishers, who educated the people to an appreciation of this industry, claim to be able to hold public favor by continually giving the trade something in advance of the present designs. The largest publishers of cards in America are L. Prang & Co., and the success of these pioneers has drawn others into the field, and now a dozen different concerns are sharing in the profits of the card business. Though followers, they are in no sense imitators, but produce work that is original in design and showing much artistic ability. Some of the holiday cards issued by Ward & Gay are very novel in conception and truly appropriate for the season.

In the importation of fancy goods, a large in-

crease is noticed over former years. With the exception of one New York importing house, Gay & Wolf, of this city, are the largest importers in the country of fancy ware. In photograph albums alone this house imports a thousand different grades and styles, while the importation of fancy leather goods, &c., is equally as varied. The entire production of two Berlin factories are handled by this house and its trade extends from ocean to ocean.

Trade on the whole may be said to be in a healthy condition. A good deal of young blood is being infused into the business, and that conservatism which seems so long to have swayed its movements is about to pass away. Young men with new ideas in keeping with the progressiveness of the age are entering the various branches of the stationery trade, and are doing much to attract the attention of the world to Boston—a market where goods can be had upon as favorable terms as New York offers.

A. L. D.

TORONTO GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, November 3, 1883.

The text on which I wish to make a few observations you will find in a United States postcard under date of October 30, "Holiday Number of THE STATIONER. Seems to me that the Dominion ought to supply some extra news for that number, &c."

Yes, sir, it can. We have more news over here than we know what to do with, and shall be glad to get rid of some of it. More than that, the Dominion of Canada is a big place, and must be heard from in such an important event. You are proud of your great country, and justly. We have no quarrel with you on that score. But you have come to think that you sit on the top of the ladder, and when your eagle shakes his wings and squeaks, all the rest of the world must crawl into a hole. Now, sir, I suppose when you were a youngster you had the map of North America whacked through your cuticle and hence by absorption to the utmost recesses of your brain—I have a faint recollection of some preparation of birch to be taken before I could get it all right—and you finally came to the conclusion that U. S. A. was a big place, and so it is, but the Dominion of Canada is a bigger. What do you think of that? Why, on our east that rough old customer, the Atlantic, swashes our shores. I could not tell you how often it has compelled me to rush on deck and study not only the action of wind and water on a ship, but the curious problem as to why the contents of my stomach fairly yearned to add its quota to the vasty deep. On our west the Pacific quietly laps our shore, but on the north we have the North Pole, which you haven't got. Here's where we manufacture ice, and bears, and such. And whatever may happen we are certain of ice for our claret in summer, *i. e.*, if we can get the claret, and in the winter we either hibernate or take to hot Scotch. You see how infinitely superior our advantages are, and, as Aunt Hannah says, "don't you forget it." We are to be the predominating race of this continent. Your eagle may scream and tear around, but when our

bear begins to chaw trees and swing his tail, your rooster will have to get out.

Extra news! Why, bless your heart, we have it here in Scriptural abundance, that is pressed down and running over. In fact, there is no end of it. Just now, we are troubled with bulls and bears—these animals, I believe, flourish better in New York than here; anyway, they have been on the rampage here and a number have got hurt. The result is that stock of all kinds have declined. The banks are tightening up and the legitimate business folk have to suffer. Wouldn't it be a good thing to have a close season for these folk, something after the style of our game laws?

Another item which ought to be ventilated a little, but being local would not interest the wide range of your readers. At the same time it may not be out of place for me to give a point or two. Two of our leading publishing houses have entered the field for the supply of a new series of readers for our public schools, and for some time have been pitching mud about through the press in profuse quantities. So far as the printers are concerned I have no doubt they would not object to have the fight continue. But lookers-on outside deprecate the whole thing. It is not a very edifying sight to see two leading houses trying to out-cap a Billingsgate fishwoman in expletions through the press.

The trade outlook is not so bright as we would like to see it. There is a fair amount of business doing, but it lacks the vim of last year. Money is not so abundant; too much of it has been locked up in the Northwest and other speculations. Then the harvest is not turning out as well as was anticipated lumber is dull; and so by putting all this together we may pretty nearly hit the mark as to the cause. Buyers, have purchased with more caution; this is evident from the customs receipts. Collections are not altogether satisfactory, but so far as I can gather there is no uneasiness and a satisfactory turnover will be made by all our leading firms.

In my wanderings to-day I ran against the successful and popular bookseller, stationer, &c. of Guelph, T. J. Day. I said that our meeting was very opportune, for I was looking out for some items for the big fall number of the AMERICAN STATIONER, and to the question, "What about business in your flourishing city?" he answered: "Well, if you want to know, we are all hard up." "Shall I repeat your words?" I said. "Oh, yes; and how it is." But let me add that friend Day is an Irishman, and not a bad sort either; and sometimes always don't say just what he means. We have few men who have a keener eye to business than Mr. Day, and very few who have been more successful.

In my former letter I had a word to say about most of our leading houses, and from later inquiries can confirm all I said. Barber & Ellis Company report again to me to-day that they are very busy with their Christmas goods, and that their Canadian prize-cards are meeting with a good reception. In their blank-book department and their envelope manufactory they are very busy. Their new envelope machine, which gums, folds and cuts 60,000 envelopes in ten hours is a wonder of itself, and is the fastest machine in the world.

Brown Brothers have their diaries about ready

for delivery, and also state that they are crowded in their manufacturing departments. They also confirm what I have said about trade. They are busy, but customers are not purchasing with the freedom of last year.

Can't say any more. Time to post.

C. H.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Oct. 13, 1883.

Little change has taken place in the condition of trade here since my last letter, and there is still "nothing stirring but stagnation," and most people are in Hamlet's position of "feeding on the air, promise crammed." Whether or not with good reason and reliable data I cannot say, but those who should know predict that an improvement in trade will set in during the winter. Commercial men who claim that they have made a science of their studies aver that we are now emerging from a period of depression and entering on one of elevation and prosperity, and that this desirable condition of things will be shared by all the big manufacturing towns in Europe and America. These agreeable prophecies have also been very common lately in the "trade and commerce" articles of the London newspapers, and perhaps by their encouraging tone may do something to bring about the desired consummation. But to me it appears highly improbable that any real and lasting improvement can take place in Europe, at any rate while the feeling of insecurity continues as a result of the disturbing elements existing in every country. I have no wish to cry wolf, the utterance of jeremiads is not especially congenial to me, but I am bound to say that I see but little reason to anticipate any but a transient brightening of the commercial horizon in the near future. I do not attach much importance to the fact which has been, in some quarters, made much of, that the failures in the paper and printing trades have been unusually numerous; this is no doubt largely owing to the fact that under the new Bankruptcy Act "compositions by arrangement" will be somewhat less of a farce played for the benefit of the "man in difficulties" than they are at the present time; moreover, it is just as well that "shaky" firms should make way for sounder concerns, it is to them and not to the genuine trader that the present artificial system of doing business—fictitious discounts, forward datings, &c.—are due.

In the way of novelties there is little to chronicle, as a matter of course, at this time of the year, but many good things which escape notice will be found in the catalogues of various firms who are taking advantage of the slack season to compile those useful trade lists. Marr, Downie & Co., of Glasgow, have recently issued one that will be found serviceable, as it is copiously embellished with illustrations of innumerable articles in stationery, books and sundries. Charles Goodall & Sons, of London, are also getting out a list which, when complete, will be a very complete one. The goods of this firm enjoy a high reputation, and deservedly, for they are of capital quality, and invariably find customers. Some memorial cards brought out by them a few months ago were a distinct ad-

vance on anything hitherto produced in that line in this country, the primitive production in embossed black and white, which had hitherto done duty, were completely ignored, and in their place really artistic designs executed in silver and purple or black; were produced. The innovation has been completely successful, and the publishers fully recouped for a large outlay. The menu, programme and ball cards of this firm are also very much admired, the quality of materials and the careful printing and finish in colors, silver and gold, combine to make them sound goods.

A new thing here is the "Everclean Pencil and Ink Eraser," of Wolff & Co., which consists of two blades of rubber, one of which erases pencil, the other ink marks. When not in use these blades close into a receptacle like the blades of a penknife and can thus be kept clean and usable. A "Liquid Chinese Ink" sold by this firm is said to be absolutely permanent when once dry. It gives a deep black when pure, but can be used as a washing of any degree of tone by reducing. Some good crayons which obviate the use of ink are another of the Messrs. Wolff's lines.

Thomas Hailing, of Cheltenham, is doing fairly with some of H. McAllaster's advertising cards. This is a line of goods but little known in this country, and might with advantage be pushed more than at present, as a good many people would gladly use a form of advertising which would save their communications from the common fate of circulars and such vehicles of addressing the public, that of kindling the kitchen fire.

Next week I hope to take flight for a while into "fresh fields and pastures new" in the provinces, from whence, if there is anything to record, my next letter will be dispatched. Birmingham, which claims to be the centre of commercial as well as of political go-a-headism, will probably be my first place of sojourn.

W. F. C.

CINCINNATI COLATURES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, November 5, 1883.

Business is dull in general stationery at retail. Jobbing business in certain lines is very good, and, on the average, is almost a boom—comparatively.

Engraving is a rapidly developing business here in Cincinnati. *The Week*, an illustrated paper which started in September, has set up a photo-engraving establishment to supply its engravings, and outside orders have so poured in upon it that the picture concern has been compelled to increase its working force. Achert & Co., Bogart, Beck, Cohen & Co., McCord and Williams are doing good work in wood-engraving. McCord is young and talented, and has just set up for himself. Folger is doing fine map work, and wood-engraving also.

In addition to these, printing establishments like that of Peter G. Thomson and C. F. Woodrow, employ their own engravers. Some of the large label specialty factories have a large corps of engravers. There is no such thing as cataloguing engravings and engravers, in all their armifactions, in Cincinnati in a single letter.

The numerous lithographing houses all employ large corps of artists. The Strowbridge Lithographing Company pays artists all the way up from \$25 to \$200 a week—yes, \$200 a week, \$10,400 a year.

In job printing there has been a marked advance in this city within the past year. There is room for it in some directions. There have for years been several fine specialty job printing houses here doing respectable work. But there has been a lack of a house prepared to do anything and everything in the latest and best style—to take and fill almost every description of orders on short notice.

In the way of printers' supplies, machinery and facilities, those in the business are wide-awake men trying to keep up with the times and the demands of the trade. In bookbinders' supplies and machinery, &c., Snider & Hoole fill the field most admirably. But there is room for something not mentioned above—something like the Riverside press, and it will be here soon, depend upon it.

Manufacturing stationers all have their presses going, chiefly on mercantile work. C. F. Bradley is making things lively on Fourth street. M. & R. Burgheim, over the Rhine, are turning off a fresh lot of German almanacs to be exported to the fatherland. They make large exports of these publications annually. W. B. Carpenter & Co. say that sales are only average in the shop, but the manufacturing department is busy as a hive of bees. The base-ball season is over and the Carpenter boys have nothing else to do but work. Robert Clarke & Co. were specially mentioned in the last letter from here. J. R. Hawley continues his wonderful news and stationery store much after the old style, which is a match for any new style which has thus far made its appearance. Mallory & Webb do a live manufacturing business at their place at 100 Walnut street. J. R. Mills & Co., with their old established custom, are having a perpetual "high jinks" of a time and are making a business of scooping in new customers, who will be old before that house gets through with them. A. H. Pounsford & Co. are having a good jobbing sale of art stationery and notions—good beyond their anticipations and persistent without precedent in their experience. William Skinner & Co. have forgotten that there ever was a flood, and oblivious to the prospect of anything like a flood hereafter. One stepping into their establishment would think an overflow once a year would do them good, they mind the last one so little. It was no joke, though, while it lasted, and even though it may have proved a tonic in some cases, it is a style of bath a business man doesn't want to have much to do with. Van Antwerp, Bragg & Co. are going right along, just as if there were no such persons in existence as H. W. Derby & Co., or the Harpers. Derby & Co. are stirring things up, though, at a lively pace. Alfred Warren & Co. have a wonderful snuggerly of second and first hand books and general stationery, on Central avenue. It is one of the institutions of this city.

C. F. Woodrow has as bright a store-room as ever. It is a model in every respect, and brightened at somewhat of a disadvantage. The arrangement of the show-cases and windows are

new and exhibit taste and invention. Moore, Wiltach & Baldwin are busy as ants in the busy season, employing all the facilities of their great establishment to fill orders. George Stevens has his show-window newly dressed up with beauties—in truly artistic style.

John Holland is pushing the gold pen business and his kindred novelties and notions in the way of charms, pencils and the like, and his orders from the East continue to increase while his trade is rapidly extending itself in the Western field. The achievement of this establishment in the way of employing invention and adding variety in the way of enriching its products are wonderful.

And, finally, here comes the Globe Files Company. I hope that the paragraph about it won't drop out on the way to New York. Perhaps somebody has heard of that company and its cabinets and cases and letter files and music files and files of every description, not an ugly file in the lot!—Perhaps some one has heard of it. Those who read this correspondence certainly have and this paragraph is to rub in the fact that the selfsame concern is alive and kicking. Yes, kicking, whenever time can be spared from filling orders to indulge in that diversion. Its products are ingenious; they are adapted to the purpose they are meant to serve; they are pretty; they sell well; those who buy them stay pleased with them and show good judgment by such conduct.

If I haven't mentioned Chatfield & Woods, Ross, Robbins & Co., Charles Stewart & Co., Louis Snider's Sons, the Dennison Manufacturing Company and many others, it is not a logical conclusion from that fact that such firms do not exist and prosper. Very recently there have been trade visitors here, among whom were the following: Warren, of A. J. Holman & Co.; Looves, of Dreyfus & Weiler; George Freeman, of Lead Pencil Company; Wallbridge, of Hoff & Wallbridge.

PRINCE WILLIAM.

A method has been devised for transferring a design on to a tissue which is to be embroidered. A mixture is made of printer's ink, glycerine and wax, and the design printed in it on to a sheet of paper which has been folded, a solution of stearine and wax having been applied between the folds. The paper is then placed over the material upon which the design is to be transferred, and is pressed over by means of a smoothing-bone.

One of the most pressing needs of book-makers to-day is some simple way of making handsome designs for book-covers for cheap editions. The process of cutting a brass stamp is very laborious and expensive, and a practical German has just given a hint that may be worth adopting. He suggests making the design in black and white outline, and from that getting a photo-engraved relief plate. This is electrotyped and the shell filled with brass instead of type metal. He says that such bookbinders' electrotypes last about twelve times as long as the others, and besides being very much cheaper, there is no comparison between them and the cut stamp for opportunities for free-hand designs. The stamps now used are unpleasantly stiff and ungraceful.

TREASURY WRITING INKS.

VIOLET, BLUE, GREEN, CRIMSON, CARMINES AND BLACK. DAVIS' NEW CIRCULAR INK RACK AND ASSORTED WRITING INKS.

PENCILS, TOOTH-PICKS,
Whistles, etc,

SALESROOM,
18 JOHN ST., NEW YORK.

CAUTION.—An inferior line of Gold Pens are being offered on the market, bearing the name of a dealer which resembles my stamp, I therefore advise the Trade when ordering goods to inquire if the salesman represents LEROY W. FAIRCHILD.

The reputation of the LEROY W. FAIRCHILD GOLD PENS has been sustained for over thirty years. Their superior qualities are acknowledged throughout the world, and they are to-day without noteworthy competition.

My New Illustrated Catalogue and Price-List combined, which represents New Designs in Pencases, and an exceedingly large line of Fine Novelties in Charm Pencils, &c., will be forwarded on application.

Every article being made at my Factories enables me to offer the very best advantages.

Leroy W. Fairchild.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 8, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WHAT is the matter with the manufacturers of blotting-paper? Last week we noted a reduction in the price by one manufacturer, to which we again refer this week, and now, in another column will be found a notification of a new and lower price for the "Climax." The manufacturers of the latter seem to be governed by well-founded reasons for their action, but as yet we have not been told "why" in the other instance. We don't think that paper generally can bear any reduction in price; for it is pretty cheap now, and there must be some incentive for widening discounts.

REPORTS gathered by the Chicago *Tribune* from numerous and widespread sources of information are to the effect that general trade in the Northwest is prosperous, and, in the various industries employed, to an extent not realized by the public. This inquiry was extended to all lines of trade and manufacture and to the agricultural interest. Farmers are said to be well to do, standing in no need of money and able to keep their grain from market. Manufactories are running full time and profitably, and the people generally are employed and well to do, the proportion of those under discouraging conditions being quite small. Assuming that the same conditions exist in other sections of the country, as they probably do, there is no occasion for want of confidence in the stability of trade. Our own correspondents confirm this view, and all that is to be done is to stick close to business and get rid of the shams and corruptions which affect trade, observing wholesome prudence in all of our transactions, and we shall do very well; indeed we shall.

IN our last issue attention was called to a circular to the trade from the manufacturers of "Treasury" and "Commercial" blottings, in which an increased discount on these goods is announced. Formerly the margin to the jobbers in selling these goods consisted in the difference between the net weights of the paper and the "long" weight which corresponded with the figures stenciled on the packages, and which the manufacturers called their "numbers" and the jobbers advertised in their price-list as *pounds*. This difference amounted to about 10 per cent. and satisfied the jobbers. Some few years ago, in consequence of a little discussion which arose as to this system, the retailers began to buy at *scale* weight, and the manufacturers began to allow a regular discount from pound price. This has ruled for quite a while at 5 per cent., but now it is placed at 10 and 5. The paper market does not show any particular weakness just now, some grades having been advanced, and we don't quite see the reason for this continued cutting in prices of blotting. The manufacturers of "Treasury" also, for the first

time to our knowledge, announce in plain figures in this circular that their paper weighs 54, 72, 90 and 108 pounds to the ream, respectively. Although we have been telling the trade this for years, we congratulate the manufacturers for having the courage to finally announce it themselves. The next thing they should do is to get the jobbers to stop advertising these same reams as 60, 80, 100 and 120 pounds instead of 54, 72, 90 and 108 pounds. And then they should go a step farther and brand these correct weights on the packages, just as they put the correct weight on "Commercial." We might go still farther, and ask why they should not make "Treasury" correspond in weight with "Commercial" and the brands of all of the other makers? It might save confusion. But we must not ask too much at once. It is only a question of time when we shall have universal money and measures, and we have lately arranged for uniform *time*. So we may, at no distant day, hope for uniform weights in blotting-paper.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

Well! How do you all feel since the election? I suppose that THE STATIONER will not let me talk politics, and so I must forbear comment on certain features of the result; but I am sure that there is one thing that I can say, and it is that—generally speaking—no one is disposed to crow. Honors are divided, as it were.

But, this being the case, isn't it a good thing for the paper, stationery and printing trades? If the result of the little political events of Tuesday had been all on one side, we might have reasonably forecasted a one-sided affair next year. Now, it is anybody's game, and excitement is likely to run high, and the demand for paper, envelopes, election stickers, and everything else that goes in with the paper-and-ink ammunition of a campaign, is to be in exceeding great demand, and trade will be lively thereunto. Yea!

This is all that I have to say about politics—except that I can say generally, "Didn't we wax 'em?" Who? Why, the other party! I am sure that this is a nonpartisan statement. It ought to suit everybody.

Of course the old-time question comes up, "Who struck Billy Patterson?" As usual, nobody knows.

John Morris, successor to Culver, Page, Hoyne & Co., is, I understand, sending out circulars to the trade asking for their lowest discounts for cash. The successor evidently does not conceive that he has assumed any of the liabilities of the old firm, and does not say anything about paying up on its account. He has what is left of its goods, bought on credit, however, and I know of some people who would like to get some money for them. Does this cir-

cular partake of anything in the nature of "cheek?"

What's the "racket" with the blotting-paper manufacturers? I didn't think that there was any call for lower prices in paper. Last week you gave us the announcement that "Treasury" and "Commercial" had taken a lower peg, and this week I see that the "Climax" has given better terms to buyers. Shall we see the New Haven mills take another "tumble" next week? This saltatory exercise of the blotting men is puzzling to the trade, who want to buy at the best price. Just let me know, gentlemen, when you will stop it, and I will announce the day and the hour.

I was surprised to learn the other day that one of the rules of the Stationers' Board of Trade prohibits the Secretary of that organization from discussing trade subjects even when the same are not connected with the business of the Board. This accounts for the fact that Mr. Booraem always shuts up like a clam when anybody asks him how he likes the form of the most recent introduction in papeteries or the latest thing in shape novelties. I never could account for it before, but am now satisfied that the Secretary is not responsible for his reticence. I wonder how he gets out of it when his youngster asks him for a chromo. That Board of Trade is too, too hard!

F. G. Bufford's prior experience with type-writers has not, it seems, been effective as a warning. He is bound to kill a clerk, for he has bought a brand new type-writer. I am told that he carefully examined its mechanism prior to purchase to assure himself that it would not do the killing too fast.

I have observed the resemblance which a member of the trade bears to "the immortal Will." Like the "bard of Avon," he is reputed to be "heap big" on the "poetic lay." It is possible that, taking his tendency to the construction of rhymes with his resemblance to Shakespeare, we may rejoice in this our day at the advent of another promise. How often is it that history repeats? Is it time for another refulgence?

I have just been told that you are going to have a holiday number, and that these few remarks are expected to appear therein. Now, this I call "quite too bad, you know." Why didn't you give me time to prepare an Xmas story in brief paragraphs? I really regret to have lost this opportunity, for you don't know how effectively I could have done it. I would have brought in all of the trade and described their gifts. To one I would have given a cocked hat, to another a magic bottle, to another a piece of calico, and so on through the whole list. Really, you don't know what you have missed. I do. It makes me feel, so—so kind o' distressed—that I shall have to stop right here and retire to my private lachrymal, whereunto I shall devote my attention for the next few hours.

N. B.—Just three quarts!

ANSWERS TO CORRESPONDENTS.

O. R. asks: 1. Who manufactures all kinds of hemp twine, fine and coarse; also, cotton twines? 2. Who are manufacturers of Paragon blotting?

Ans.—1. Cable Flax Mills, 113 Worth street; A. H. Hart Company, 90 White street; L. Waterbury & Co., 139 Front street; Travers Brothers (manufacturers' agents), 107 Duane street—all in New York. Several of these supply cotton twines. The San Souci Twine Mills, 349 Broome street, and Johnson & Co., 3 Lispenard street, will furnish cotton twines. 2. Paragon blotting is made by Sutphin & Wrenn, Middletown, Ohio.

OBITUARY.

W. L. ORMSBY, SR.

Waterman L. Ormsby, Sr., died on November 1, at his home in Willow place, Brooklyn, aged seventy-four years. He was an engraver, and invented several machines used in that art. "Deceased was one of the founders of the Continental Bank Note Company, and the first five dollar national bank notes issued for the government by this company were protected against counterfeiting by a device which was Mr. Ormsby's invention. He also aided in first telegraphic experiments by Professor Morse and Henry A. Munson.

PROFESSOR JORDAN.

The death is announced, at the age of eighty-three, of Professor Jordan, the engraver, president of the Academy of Arts of St. Petersburg. He studied at the academy, where he gained two medals and a scholarship for a journey to Paris. From there he was obliged to move, by the revolution of July, to London, where he worked under Raimbach, collaborating, it is

stated, on that artist's plate after Raphael's "Holy Family," in the Louvre. He traveled in Italy and spent eighteen months on a plate after "The Transfiguration." This established his reputation and on his return to St. Petersburg he immediately received an appointment to a professorship in the academy. After a second journey to Italy Jordan settled in St. Petersburg and was honored, among other things, by the appointment of keeper of prints at the Hermitage.

The first premium of the Cincinnati Industrial Exhibition for reversible document envelope was awarded to the Cincinnati Paper Novelty Company.

Market Review.

● OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, November 7, 1883. }

THE MONEY MARKET.—The money market was featureless, except for the abundance of funds and the ease in rates. Call loans on stock collateral were 1@ 2½ per cent., 2 per cent, being the ordinary rate. Time loans are quiet and mercantile paper dull and firm. The stock market, under the influence of the State and municipal elections, has been exceedingly quiet, yet the tone has been firm. On the whole, the condition of affairs is more promising than for some time past. The upward tendency seems to have gained a substantial basis. Government bonds were strong and ½ higher for the 4s and 3s. Railroad bonds were active and strong, and prices were higher. The market for foreign exchange, while fairly active, closed at a slight reaction from top prices. Commercial bills are not in large supply, and the strength of the market was partly attributed to the scarcity of freight room.

THE PAPER MARKET.—Business among our city paper dealers keeps up to about the largest proportions of the autumn, and in many instances the volume of transactions for the month of October is reported to be larger than for the corresponding month of last year, but the increased amount of business has been done on very much closer margins than a year ago. Although every grade of paper, with the exception of manilla wrappings, is now selling at lower figures than at any previous time, there is nothing of that feeling of demoralization and depression to be seen in many lines of general business where the auction-rooms have been sought as a means of disposing of over-accumulations of stocks. The paper trade have not had to resort to this, nor is there any likelihood that they ever will. Although paper is sold very low, it is being marketed at a profit. As a general thing, manufacturers appear to be well employed on orders, and prices continue to rule in a steady line.

THE STATIONERY MARKET.—While trade has not been noticeably active this week, it has been tolerably fair and steady. To be sure, there has been somewhat of a lull, but this is nothing more than could be expected during election week, and the indications are that as soon as everything settles down again to its normal state there will be a more active condition of business. After all, trade is always the result of well-directed efforts on the part of those having goods to sell. There is no royal road to a good trade, and a dealer who sits down and calmly lets business take its own course will come out of the narrow end of the horn one of these days. Trade, unlike a great many other good things, will not come to a man, but it needs an enticement in the shape of good goods, low prices and judicious advertising. In a word, trade is the result of push, small profits, reliable goods, and a persistent effort to keep before the public what one has to offer. Dealers who are guided by this principle will always command a good trade, and need not fear being swallowed up in a time of panic. In inks there has been a falling off of orders, but as the ink trade practically ends about this season, dealers do not complain. The trade in fine stationery is very fair, rather above the average for this season. Gold pens and jewelers' novelties are commanding a fine trade. Dealers are behind in their orders. There is nothing new in the envelope trade, business being about the same as last week. In plush goods, toys, &c., the trade is quite good.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

C. H. Monger, publisher, Anamosa, Ia., has sold out.

Dickson & Rhalen, stationers, &c., Winnipeg, Man., have dissolved.

W. H. McCoy, bookseller and stationer, Weston, Ore., has been attached.

A receiver has been appointed for the Central Printing Company, Indianapolis, Ind.

J. A. Stewart, printer and publisher, Richmond Hill, Ont., has been burned out.

Robert Orr, newsdealer, stationer, &c., Clinton, Mass., has sold out to Geo. S. Gibson.

George S. Lester, dealer in fancy goods, &c., New Haven, Conn., has made an assignment.

The Lutwyche & Gilmore Manufacturing Company, manufacturers of picture frames, &c., Chicago, Ill., has sustained a loss of \$8,000 by fire. Insured.

Carter, Dinsmore & Co. are preparing to greatly increase their facilities for the manufacture of the Carter Inks by the erection of a new factory at Boston. This will give the firm a productive capacity of 8,640,000 gallons, a thing which their largely increased trade has made necessary. Among the new brands of inks lately brought out by this firm are the Carter Stylographic Inks, which have given satisfaction wherever they have been introduced. The trade of the firm during the past year shows a large increase over any previous year.

The "Dove" card published by J. G. Bufford's Sons is an excellent representation of a flying dove. The plumage is natural in appearance and the coloring is excellent. The figure is embossed on a card, the groundwork of which represents the sky of cerulean blue tinged with a roseate gleam at one corner.

The Parsons Paper Company, Holyoke, Mass., makes a specialty of bond, bank-note, parchment, tracing, Treasury folio and Treasury cap papers. These goods are made with care from the best materials and are remarkable for strength and perfection of finish. They are highly recommended to all who require paper of strength and durability.

Among the enterprising firms in the South is that of Marcus W. Wolf & Co., located at 13 Hopkins place, formerly South Sharp street, in the city of Baltimore, Md. This firm has recently fitted up the entire second floor of its handsome and spacious warehouse at considerable expense for the purpose of displaying samples of its immense stock of holiday goods, which embraces photograph and autograph albums, scrap-books, easel frames and mirrors, writing desks, work and jewel boxes, comb and brush boxes, whisk-holders, checker and backgammon boards, music folios, pocket-books and ladies' satchels, inkstands, Christmas cards, papeteries in almost endless variety, and many other desirable goods, too numerous to mention.

A. J. Holman & Co., publishers of family and pulpit bibles and manufacturers of photograph albums, 1222 Arch street, Philadelphia, offer to the trade the largest and most beautiful assortment of bibles and albums manufactured in this country. Their bibles, from the cheaper to the most expensive, are always kept up to a high standard, both in printing, paper and binding. They are bound in elegant designs, in the strongest and most durable manner. The covers of their bibles are all laced in with strong twines—in fact, cut in boards—and not bound like cloth books, and glued into the covers, as other publishers bind their bibles. It is well known that durable bindings are one of the most important points to be considered in a well-made family or pulpit bible. They are the oldest manufacturers in this country of photograph albums, and their albums have gained a reputation of being the only domestic albums which equaled the foreign goods in style and finish. Their prices are said to be lower than any others, considering the workmanship, quality of paper, leather, &c., and general style and make-up of their bibles and photograph albums. These goods are for sale by all jobbers in the United States and Canada.

The Globe Files Company, Cincinnati, has several new files in the course of manufacture, which are not yet ready to announce to the trade. The demand for the file box adapted for circulars, which is manufactured by the company, has been exceedingly large, reaching way up in the thousands. Since the first appearance of these goods they have been perfected in many respects, and have now no superior. The "Leader" file has given very great satisfaction to the trade, and the demand for it has been enormous. The same is true of the "Pamphlet" file. The company's "Letter File Cabinets" are selling in large quantities. The company, in consequence of the increasing demands for its manufactures, proposes to enlarge its factory next spring.

Chas J. Cohen, Philadelphia, has been doing a very active and successful trade during this autumn. The extensive show-rooms and warehouses are in complete order, and all memoranda intrusted to this firm receive the most accurate and careful attention. Mr. Cohen has just introduced, under his personal supervision, a complete system of electric bells with annunciators, by which all of the various departments are connected by signal, speaking tubes and telephones, thus bringing every branch to a central point, and greatly facilitating the filling of orders.

Henry Levy & Son are offering to the trade one of the most complete and attractive lines of holiday novelties in this city. It comprises a large variety of imported and domestic fancy leather and plush goods, novelties in bisque and French china-ware, table-dressing sets, plush fire-screens, smokers' sets, polished wood writing-desks inlaid with woods of different colors, and many other lines of fancy articles suitable for holiday gifts, &c.

The business of the Pacific Ink Factory, San Francisco, Cal., will hereafter be conducted by L. Schwabacher and James A. Salts, who has been admitted to partnership. The firm-name is Schwabacher & Salts.

Michael Pryor, dealer in paper stock, &c., Philadelphia, Pa., has been sold out by the constable.

The establishment of the Union Publishing Company, Kansas City, Mo., has been damaged by water.

The Rock River Paper Company, of Marshall, Mich.; Beloit, Wis., and Chicago, Ill., has suspended.

Leonard Kidd, of the firm of Kidd Brothers, printers and publishers, San Francisco, Cal., has been attached.

James McClatchy, of the firm of James McClatchy & Co., publishers of the *Bee*, Sacramento, Cal., is dead.

M. J. Anderson is offering Christmas cards in assorted lots to suit buyers needing a small variety. He has his line of European calling cards ready and is offering some new-style calendars.

W. T. Rightmyer, Meriden, Conn., manufactures the central and round pointed pen, in which the heel is raised so that when inserted in the holder the ribs are brought on a line with the centre or axis of the holder.

Hinman, Moody & Co., paper dealers, Beloit, Wis., are reported by telegraphic dispatches to have made an assignment. Mr. Cobb, of the firm, was the treasurer of the Rock River Paper Company, which suspended a few days ago.

R. T. & S. Blood, Jr., 81 John street, N. Y., have increased their facilities for perforating, and by the aid of new machinery are able to work at short notice and fill orders in large quantities. They also give careful attention to paging and numbering.

J. R. Wills & Co., Cincinnati, received the first premium for blank-books at the Cincinnati Industrial Exposition of 1883. Their display consisted of over eighty blank-books, from medium down, and was remarkable for its character as to quality, workmanship, &c.

W. P. Macauley, of the firm of Macauley Brothers, Detroit, Mich., has left Detroit for Los Angeles, Cal., in search of health, he having suffered from a hemorrhage some weeks since. He has sold his interest in the business to his partner, J. F. Macauley, who will continue under the same firm-name for the present.

Charles J. Cohen, Philadelphia, reports considerable activity in all branches of fancy goods, and the very attractive show-rooms are now seen to their best advantage, being well stocked with every desirable novelty the season affords. Quite recently a large shipment of bisque figures and bronzes, all of new design, has been received, which will give patrons of this well-known house an opportunity to select very desirable novelties in that line.

Theodore Leonhardt & Sons, Philadelphia, who have made a reputation for their imported European cards and novelties, have this year a fine stock of Christmas cards, plain and fringed. They will send price-list on application. They have just received from Paris a splendid invoice of enameled plaques in twelve designs. Their assortment of Paris calendars is meeting with a great favor; these are a very fine novelty and are offered to the trade at a liberal discount. W. Schimonsky, the manager for the firm, re-

ports a very good trade in all the imported articles handled by that firm.

Lipman's new "Unit" punch for punching and also the eyelet machine are reported in very good demand.

Fancy leather goods are in good demand. C. T. Rump, Philadelphia, reports a very good business in porte-monnaies, cigar cases, and also in all imported novelties.

The Continental Manufacturing Company, Philadelphia, is doing a large business, both in ink and mucilage. This company also manufactures sealing-wax, which finds a very quick sale.

Nagle & Co., Philadelphia, have a very lively trade in duck or canvas bound blank-books which are one of their specialties. They have also a great demand for legal cap with numbered lines.

The Philadelphia branch office of the Dixon Crucible Company, under the management of C. W. Brown, has had remarkably good trade this year. The "Dixon American Graphite Pencils S. M.," are in demand; and the "inserted rubber tablet pencils" find an increasing sale.

The National Publishing Company, Philadelphia, has a very large demand for its quarto bibles and has been pushing its immense manufacturing facilities to their utmost. The extent of its orders can be imagined when it is remembered that its manufacturing facilities are double those of any other quarto bible establishment in this country.

Louis Dreka, Philadelphia, is receiving every day from Europe the novelties which he selected during his last trip. These articles find a very easy sale among stationers. Lustra decoration, which is a specialty of his, is in great favor. Louis Dreka has a very brilliant assortment of Japanese leather goods, and is the only person in Philadelphia making them.

Rosenbaum & Co., Philadelphia, are adding every day some novelties to their large assortment of fancy Christmas and New Year cards. Among them are to be noted a "Chapel," in red plush and satin, with panel and hand-painting on white satin. They make a variety of satin cards, hand-painted, of exquisite taste. One of their best articles is a crescent in satin and velvet, with fringes and artificial flowers.

The line of holiday goods presented to the trade this season by F. H. Loss, Jr., is very attractive. His line of hollyhock vases is noticeably full. A beautiful design in these goods has an easel stand and an opening in the top so as to hold ferns or flowers, thus making it resemble an antique vase. These novelties come in several different designs decorated with flowers in oil and water colors. There is also a large variety of hollyhock panels on easel stands. They are also handsomely decorated in oil and water colors. A unique thing in card tables is of hollyhock, with legs in the form of an oar, the blade of the same being decorated with flowers hand-painted. A large number of fancy articles may be seen in the shape of flat-irons, hatchets, smokers' sets after the pattern of the "old oaken bucket," sickles, wheelbarrows,

trowels, &c. These come in both plain and fancy designs. In Swiss goods there are handsomely carved wooden vases, inkstands, candlesticks, match safes, crumb-pans and brushes, and nut-crackers with caricature heads in great variety. Some very handsome novelties are in the shape of carved wooden book rests for the table. A most noteworthy line of goods is embraced by a great variety of rustic easels in papier-mâché, covered with moss and ornamented with imitation birds' nests containing eggs and a spray of artificial flowers. There are also a great variety of musical chalets or Swiss cottages, intended for jewelry cases. They are lined with plush, and on lifting the lid play from one to four tunes. Besides these goods, there are a number of other Swiss musical novelties in the form of cigar cases, &c.

C. R. Carver, manufacturer of the Brown & Carver improved paper-cutting machines, has brought his machines to a high and critical standard of perfection. They now stand among the first in the market, and are said to be unequalled for durability, excellence of construction, accuracy of work and rapidity of movement. A trial will convince every one of the adaptation of this machine to all kinds of work done by printers, bookbinders, paper-box makers, label printers, lithographers, &c. Their peculiar construction and perfect adjustment make them among the strongest and most powerful machines in use.

Charles Beck is now very busy filling orders taken early in the season for his puffed satin goods. He has made a specialty of using only the best materials, and some of the combinations of colors in the plush and satin are very rich and effective. His scrap pictures and Christmas novelties have met with great success. Among them the following are to be noted: Scrap pictures of large sizes, in shapes suitable for plaques; fringed Christmas cards; Christmas novelties, made in satin, with patent easel back, and fresh importation of chromo advertising cards, of the finest designs.

Selchow & Righter have just issued a new illustrated catalogue and price-list for the holiday season. It embraces a large line of new and staple goods, consisting of games, toys, toy-books and other holiday productions intended for home amusements. Among the new things are "Theatre Comique," with pantomime of "Humpty Dumpty," the "International Walking Match," "Peekskill State Camp," &c.

The Guarantee Chemical Company, Philadelphia, is making a mucilage from good and pure gum arabic, which will stick fast on paper, wood, tin, cotton or woolen fabrics, and keeps clear, sweet and bright until the last drop is used from the bottle. It is claimed to be the best article of the kind manufactured in this country.

John R. Edwards, blank-book manufacturer, Baltimore, reports for this season a large increase of trade. Mr. Edwards has added to his regular blank-book business an important and complete stock of stationery goods, including papeteries, envelopes, flat and ruled papers, &c.

The Mail Publishing Company, publisher of the *Evening Star*, Kansas City, Mo., has been burned out. Insured.

W. H. Bricker, newsdealer and stationer, Beaver Falls, Pa., has sold out to J. C. Gibney & Co.

The Milan Paper Company, Milan, Ill., is reported to have suspended. It is stated that its liabilities are about \$100,000 and the assets \$70,000.

Chas. K. Wadham & Co., of Boston, manufacture an exceedingly large and attractive line of card albums. The large sale of Christmas, New Year, birthday and fancy cards during the past few years, has made a very large demand for an album suitable for their preservation and display. This firm makes a specialty in this department, and the style and sizes are both attractive and numerous. Dealers in these goods will find it to their advantage to send for samples. This house is one of the leading representative houses in the east. Its list of blank-books is large and in growing demand, the styles being original and of the best materials.

The numerous stationers' specialties which the well-known firm of French & Choate has catalogued this year will serve to widen the already extensive field which this firm has secured for the sale of its goods, a result due alike to merit, in respect to its specialties, and push and enterprise on the part of its representatives. Most of the goods offered by this firm are staple articles which continue to grow in popularity as fast as their utility becomes known. In book-shelves, dictionary holders, revolving bookcases, letter files, blackboards, writing tablets, call-bells, and numerous other specialties, there is a great variety to select from. The most of these are staple articles that have been running for several seasons. The new catalogue of the firm, however, contains a few novelties deserving of special mention. The combination inkstand and letter scale is really unique; the material is bronzed beautifully, ornamented with geometrical figures and flowers around the body of the inkstand, the frame supporting the letter scale having a raised figure of an angel floating in space. This inkstand has also a pen rack. Another novelty in inkstands has an ornamental pen rack with pretty cut-glass bottles of a new design, and a body of polished bronze.

Thomas Sinclair & Son, Philadelphia, are constantly increasing their facilities for production in the line of advertising Christmas and New Year cards and novelties of every kind. They are constantly issuing new cards which find ready sale. Among their last publications may be mentioned: a series of four moonlight landscapes in the etching style. A series of twenty cards of very funny designs, which have created a sensation as advertising cards. Four chromo cards, negroes laughing; four chromos of cats and dogs. A series of four folding chromo cards, representing the dancing of a minuet and waltz. These cards are made for balls, parties and menus. One of their best productions is the "History of the Catastrophe of a Cat Masher," a folding-card with five panels, which will become popular. The "Dude," a series of four, printed with one color and gold or silver ground; a series of four folding cards, representing cupids, and flowers in a golden frame, are to be noted on account of their rich color and good design. Their last issue is a

series of four, with women, in gold and blue ground, which is very becoming.

Day Brothers, Publishers, Albert Lea, Minn., have dissolved partnership.

H. G. McLean, publisher of the *Free Press*, San Buenaventura, Cal., has sold out.

Job G. Lee, stationer, &c., Atlantic City, N. J., has been closed out by the sheriff.

N. C. Brackett has bought out the business of O. M. Moore, publisher of the *Phono*, Phillips, Me.

The firm of Pierrepont & Gidlund, paper-hangers, &c., Sacramento, Cal., has been dissolved. J. B. Pierrepont continues the business.

Decker & Co., booksellers and stationers, Washington, D. C., have dissolved partnership. Jacob J. Decker continues the business under the old style.

Mr. Cameron, of Cameron, Amberg & Co., Chicago, Ill.; Peter O'Donnell, New Orleans, La., and Mr. Shepard, Kansas City, are among the out-of-town members of the trade that were reported as being in the city during the past few days.

The Dunham tag, manufactured by J. T. Dunham & Co., pier 24, N. R., New York, is exceedingly valuable to city merchants for forwarding their bill with goods when sending small parcels home. One person in Detroit last month ordered 10,000. George E. Richardson & Co., Boston, duplicated an order for 10,000, and Johnson & Young, Boston, duplicated with 5,000.

Ackerman, envelope manufacturer, 33 Beekman street, announces that having been practically the sole manufacturer of the Schultz Tie Envelope, he will, "in the protection of rights," enter the field for the sale of an envelope for the accommodation of third-class mail matter (samples, &c.), which will surpass any of those now on the market. Samples are now being prepared and will be sent on application. Prices will be in keeping.

The works of the United States Stamped Envelope Agency, Hartford, Conn., are running thirteen hours a day. In September, 46,500,000 envelopes were manufactured, and in October the output was over 50,000,000. A few days since the agency was behind 20,000,000 on its contract with the Government, and the present arrearage is 16,000,000 envelopes; the company expects to catch up in ten or twelve days. The manufacture of envelopes and wrappers is 1,600,000 per day.

A very pretty souvenir was presented to the ladies attending the opening of the new opera-house at St. Paul, Minn. It was a cream, gilt bevel-edge folder, fringed and with silken cords and tassels. The programme was on a four-paged inset, handsomely printed. On the front cover was a bouquet of perfumed artificial flowers artistically designed and fastened with a bow of ribbon. The whole thing was very tasty, and was got up by Bristol, Smith & Freeman, of St. Paul, under the direction of E. W. Butt, manager of their stationery department. This firm reports a greatly increasing demand for fine goods, and St. Paul must be considered a desirable market for the best that is offering.

Keuffel & Esser have just issued their illustrated catalogue and price list for 1883. The catalogue is a handsomely-printed pamphlet of 247 pages, embracing over 1,500 engravings of Swiss, English, French and German drawing instruments, including planimeters, pantographs, eccentrolineads, section liners, &c. In addition there is shown a large variety of engineers' slide rulers, ivory and boxwood scales, pocket rules, micrometer callipers, measuring tapes, light narrow steel tapes, surveyors' chains, leveling rods and poles, and many other implements for the use of mechanics, surveyors, engravers, artists, draughtsmen, architects, designers, &c. Among the articles intended for artists' use are the "Favorite" drawing tables, of which there are several different styles, from the simple table to those having all the desirable appliances and improvements. The construction of the latter is most ingenious, offering the greatest advantages in utility and convenience, making them indispensable to both the professional and amateur. There is also a full line of drawing boards, drawing models, geometrical figures, models for technological high schools, &c. The book is invaluable to all intending purchasers of these goods.

The East Hartford Manufacturing Company, Burnside, Conn., is making a new line of extra fine papers, which it is putting up in quarter-ream boxes, with envelopes in $\frac{1}{8}$ M. boxes to match. These will be found to be very attractive goods, both in quality and price, as they are put up in nice shape and include extra super, high plate and East Hartford linens. The company asks special attention to its "Netteté Quadrille" single and double linens, which are very fine in quality, and only manufactured by it, no other firm in this or any other country producing this special kind of papers. The East Hartford Company also continues to make its "Charter Oak Mills," "Huron Mills" and "Ætna Mills" lines of extra fine ruled and superfine and extra superfine flats. It also makes a specialty of plated wedding folios. The reputation of these goods has been gained upon their merits.

Thomas W. Price Company, Philadelphia, besides its large stock of Christmas and advertising cards, has this year a very extensive assortment of self-supporting shape novelties, which it sells at very low prices. Among them a pair representing a boy and girl, which is an imitation of Sèvres biscuit, is perfect. Another pair "Praying for Father" and "Father's Return" is very popular and finds an easy sale. A "Pug" and a "Cat" forming a pair are having great success. A mirror framed with imitation of velvet and flowers is one of the house's best novelties. "Cats in a Basket" and "the Ship Homeward Bound" are also noteworthy.

Hume, Parker & Hodges, booksellers and stationers, Norfolk, Va., have dissolved partnership, W. H. Hodges having retired. The business is continued by Hume & Parker.

Black & Struble, printers, Walla Walla, W. T., have dissolved partnership. Their business is continued by W. R. Struble, W. E. Black having retired.

K. R. Griffin, job printer, Norfolk, Va., has sold out to Savage & Small.

Henry Krueger, late dealer in wall-paper, Ashland, Pa., is dead.

U. L. Pettengill, of the firm of S. M. Pettengill & Co., advertising agents, Boston, Mass., is dead.

E. E. Hathaway has withdrawn from the firm of Hill, Griffin & Co., publishers, Norfolk, Va.

G. F. Jones, Manufacturer of paper, Henry-ton, Md., has been burned out. Loss \$4,000. Insured for \$1,600.

Joseph D. Stead, dealer in paper stock, &c., Philadelphia, Pa., is advertised to be sold out by the sheriff on the 10th inst.

The National Blank Book Company gives a very favorable report of its trade for the past season. The company has a large and varied line of goods, which, being of first-class quality and reasonable in price, will command the attention of buyers.

Milton Bradley & Co., Springfield, Mass., have made their first venture in the line of fine juvenile books: It is not a toy-book, but can be classed with the better kind of standard "Juveniles." It is called "Pictures and Stories from American History." All of the plates are chromo-lithographed. The book begins with the story of "Columbus and his Discovery," which is followed by other narratives of events in the history of the country. It will sell "like hot cakes."

The Richmond Paper Manufacturing Company states that the large demand for its "Climax" blotting having required increased facilities for its manufacture, it has been compelled to make the production of this blotting a specialty, and therefore the company is able to reduce the price by giving an increased discount to the trade. The price of "Climax" blotting will hereafter be sixteen cents per pound, less ten and five per cent. for scale weight; when purchases during any one (calendar) month amount to as much as one ton (2,000 lbs.), allow an extra discount of five per cent., making the price sixteen cents per pound, less ten and ten per cent; when purchases during the month amount to two tons or more, allow a still further discount and make the price sixteen cents per pound, less ten and fifteen per cent. Terms—Note at three months, or three per cent. discount for cash.

It would pay jobbers and all other members of the trade to inspect the Powers Paper Company's miscellaneous stock of stationery, consisting of a very fine line of lead pencils and penholders, made by E. Faber, together with desirable styles of imported tin pencils and soap-stone slate pencils, pass-books, memorandum books, composition books and duck-bound blank-books, in all rulings; also, an elegant line of ivory and fancy wood folders for the holiday trade; writing desks, durable and seasoned; maroon rubber bands, first quality guaranteed, in all widths and sizes. These goods can be secured at very low prices, and early purchasers will secure these bargains, as the company will discontinue its stationery department this season. The entire stock of these goods is in the New York store of the Powers Paper Company, 62 and 64 Duane street, J. L. St. John, agent,

where can also be found one of the finest lines of holiday papeteries in the market.

The firm of Hallock, Chandler & Co., wood engravers, Chicago, Ill., has been dissolved.

John Morris, successor of Culver, Page, Hoyne & Co., of Chicago, Ill., has sent out a circular to New York dealers, asking for information as to discounts on all cash business. The outstanding bills of the old firm are completely ignored.

R. R. Watson, dealer in stationers' specialties, is having a large trade in library baskets and letter trays, and the porcelain copying bowl, each of which he furnishes in all styles. The trays and baskets come in various selected woods, such as chestnut, walnut and mahogany, and have been fully described in a previous number of THE STATIONER. The porcelain bowl is a staple article, which has given great satisfaction.

The line of art novelties which the Palmer Art Company has brought out this season is attracting deserved attention and patronage from the trade. The line of goods suitable for Christmas gifts is especially noteworthy, being entirely new and the designs belong exclusively to this firm. Among these goods are the raised plaques with plush panels. These plaques represent various winter scenes raised on the surface, giving a more natural appearance than a simple picture. One design represents a country farmhouse with the accompanying landscape of leafless trees and snow-clad fields. The house is constructed of material representing a real house, and the trees and other features of the scene are as natural as art can make them without resorting to pigments, being of material resembling nature exactly. The line of plush banners mounted on easels and rustic stands are very attractive, having decorations hand-painted. They come in old-gold, garnet, blue, shaded bronze and other fanciful colors. The firm has also a fine line of glass tiles, toilet plaques in antique silver rims, and hand-painted centres, and many other novelties.

The Globe Scrap File is designed as a household scrap-book and general receptacle of papers for reference. It is made of thoroughly seasoned wood, elaborately ornamented and finished in genuine russia leather and fine maroon cloth, with extra lining and nickel-plated catch. It is thoroughly substantial and very rich in appearance. It has three different styles of index arrangements, viz., The regular "alphabetical" index fastened in on rods; the "numerical" index, having numbers 1 to 20 instead of the alphabet, the numbered divisions being opposite corresponding blank lines on the index strip, and the "folio" index. Each filing space (in either style) is provided with loose blank leaves for pasting or clippings, portraits, &c. The capacity of the file is about equal to a scrap-book of 400 pages, and the matter, being indexed, is exceedingly convenient for reference, and can be added to or have new matter substituted without mutilation, thus obviating one of the principal objections to scrap-books. It is absolutely dust-proof, and can be opened or closed instantly by means of a patent fastening. It is manufactured by the Globe Files Co., Cincinnati, for which C. M. Ward, 28 Bond street, New York, is agent.

J. H. Bufford's Sons, the pioneers in the chromo, lithographic and advertising specialty business, have come to the front recently with several new designs in Christmas and holiday cards. Their line of cards is very creditable and needs to be seen to be fully appreciated. It embraces cards of all grades of prices, and while the finer goods are of elegant design and execution no pains or expense have been spared to make the cheaper cards up to the highest standard that the quality and price of the goods will permit. Their line embraces many very pretty floral designs grouped in many ways, some of them are quite novel and original. No. 265 is a landscape scene, with children in the foreground plucking roses. While very pretty and rich in coloring this card is very low in price. Nos. 295 and 365 are Christmas cards presenting beautiful floral scenes in four designs each. In the latter number a babe creeping amid groups of flowers forms a most pleasing and conspicuous feature, and one can almost hear the little prattler articulate in true baby fashion: "Merwy Kismas! Here I tum wiz lots of flowers." No. 245 represents four winter scenes. The subjects are very striking and the artist has represented nature in a manner that would be creditable in a more costly work of art. No. 315 is decidedly English in design and execution. It is a large card and much cheaper than an imported card of similar design. Among the new advertising cards lately introduced by this firm are those especially intended for the boot, shoe, hat, clothing and other trades, the firm's line of shape novelties also presents several new designs this season.

The name of McDowell has been identified with the slate business in this country for the past half century. R. Murray McDowell, who has advertised in THE STATIONER for several years, carries on the business at Slatington, Pa. His father, the late Hon. Robert McDowell; his uncle, James McDowell, late consul at Dundee, Scotland, and the Hon. James Porter, Secretary of War under President Buchanan, founded the business in this country. Mr. McDowell makes a specialty of patent slates, as will be seen by his advertisement. He is connected with the Standard Slate Company, at 265 Broadway, N. Y., where he makes his headquarters while in the city, and frequently occupies a seat in the elegant turnout of George W. Berry, who is treasurer of the company. Mr. McDowell was at one time in business at 187 Broadway, and was quite a society man, but of late years has occupied the old McDowell mansion at Slatington, Pa., where he is always glad to see the trade. Those who are interested in patent slates are invited to send a sample slate to him and he will promptly give them an estimate of the cost of manufacture.

Daniel Slote & Co. have issued their fall catalogue for 1883. It is very full and complete and is a valuable index for the retail stationer.

M. Decrea, paper and paper-stock dealer, 95 Baronne street, New Orleans, La., was burned out on October 30. His loss is about \$5,000; partially insured.

The liabilities of Franz Gindele, job printer, Chicago, who suspended on November 1, are \$25,000; assets, \$20,000.

Franz Gindele, printer, Chicago, Ill., has been closed out by the sheriff.

An assignment has been made by G. M. Peirce, bookseller and stationer, Salt Lake City, Utah.

An attachment has been issued against McCall & Miller, dealers in stationery, &c., Weston, Ore.

Mr. Taylor, of the firm of Taylor & Moore, printers, Toronto, Ont., is reported to have left town.

The Philadelphia branch of the Dennison Manufacturing Company has been doing a big business with patent ready-cut gummed blanks for election stickers, quotations and errata slips. This company will have ready very shortly for the market a handsome box of sealing-wax, containing forty sticks, four trays of ten sticks each; a beautiful assortment of colors in each box, upward of twenty different shades. The great demand for the "Alpha Beta" wax brought out by this house caused it to add another line to meet the growing demand for letter seals. It will also bring out an improved letter seal to use with the wax. F. B. Gilbert, the manager in Philadelphia, and who also has charge of the Brooklyn sealing-wax factory, is alive to the wants of the trade. He reports the sealing-wax factory to be very busy and behind in filling orders, notwithstanding the recently improved facilities, &c. The company makes a fine display of plush jewel cabinets in various sizes; plush "opera-glass" bags, made up of the finest plush and very handsome, in many colors. It is also having a great demand for fine English tissue-papers, and in art decorations, &c.

In looking over the extensive line of Christmas, birthday, wedding and other souvenirs which Marcus Ward & Co., Limited, have produced this season, one cannot help but notice their high degree of superiority in the matter of design and execution. These goods are the products of the best English artists, and have earned a wide popularity in the American market. They come in both cheap and expensive styles. Among the more costly Christmas souvenirs is a silk-fringed card, with tassels and a floral design in bright colors on a dark background. These cards come single or folded and are appropriately inscribed with the compliments of the season, some of which are conveyed in carefully selected scriptural texts. A beautiful double-fringed card has an oval ground-work of gilt, with floral decorations, giving a most pleasing as well as novel effect. A card with floral decorations on a white background, surrounded by a bordering of sky-blue, is very neat and tasteful. A bright, attractive card is pure white, with a bunch of primroses, violets or daisies in the centre. Another card has a bordering of flowers surrounding a dark background, the effect of which is heightened by a design in bright colors. Many will prefer a card with a white bordering and background surrounding a floral design in rich tints, and having a scroll tastefully and appropriately inscribed with a scriptural quotation. A very fine line of cards has landscape scenes, portraying the rich verdure of spring, the mellow tints of autumn, and the silvery hues of winter. Alto-

gether the line presented by this firm is very praiseworthy.

A dissolution has taken place in the firm of Tomlinson & Wilson, printers, Ironton, Ohio.

An assignment has been made by Frank M. Morris, bookseller and stationer, Danville, Ind.

Steen & Boyce, publishers, printers and binders, Winnipeg, Man., have been dissolved by mutual consent. All debts owing to the firm are payable to James E. Steen, who continues the business and will settle all firm debts.

W. H. Hoskins, engraver and plate printer, Philadelphia, has had such an increase in his engraving and plate printing business that he has been compelled to enlarge his facilities. He has now nine presses running on full time.

A meeting of creditors of John Yule, paper manufacturer, Chambly, Ont., has been held at Montreal, Que., and a proposal was made for settlement. The unsecured liabilities are about \$50,000. Most of the creditors belong to Montreal.

Chas. L. Baker, Philadelphia, has gone into business as agent for Thos. De La Rue & Co., Brownell, Phelps & Venino, Myers Brothers and the Roberts Company. He has a very good line of samples and is reported to be doing a very large business.

Foley's Patent Improved Stylographic Pen.

Great reduction in price: No. 1, \$1.50; No. 2, \$2.00; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

NEW GOODS FOR FALL TRADE.

Our assortment for Fall and Winter Trade, while comprising the usual line of STAPLES, has received many ADDITIONS in NEW Goods, that are ARTISTIC and NOVEL, and will supply the wants of the Book and

Stationery Trade. Our "Gravity" Pencil is the LATEST and most desirable Pencil in the the market. Carrying the Artist's LARGE Lead, and working on the principle of gravitation, it is unexcelled for business purposes.

POWER, FOOT & HAND
Perforating Machines.

E. B. STIMPSON, 31 Spruce Street, New York.

E. P. DONNELL & CO., Chicago, Ill.,
Mfrs. of Bookbinders' Machinery and Tools.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel —tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

ORNAMENTAL POTTERY.

Plain and enameled pottery are vestiges of the Roman occupation of Britain being occasionally disinterred in various parts of that country. The art of painting pottery in enamel or with

metalline colors, and fixing them by fire, was practised by the Egyptians and Etruscans, and passed from them to the Greeks and Romans. Enameling was also practised among the Chinese. Specimens of enamel work are yet extant of early British Saxon and Norman manufacture. An enameled jewel made by order of Alfred the Great, A. D. 887, was discovered in Somersetshire, England, and is preserved at Oxford. An enameled gold cup was presented by King John to the corporation of Lynn, Norfolk, and is yet preserved. Lucia della Robbia, born about 1410, applied tin enamel to pottery and excelled in the art; Bernard Palissy, the Huguenot potter, born about 1500, devoted many years to the discovery and application of enamels of various colors to pottery. He was remarkably successful in making true copies of natural objects. His method died with him while he was in prison in 1589. In 1632 Jean Tontin, of Chateaudun, introduced the practice of grinding the colors in oil of spike instead of water. Faience and majolica may be considered forms of the art. So, in tracing the history of pottery back to its origin in the early ages, it is found very much in the same designs and finish as the productions of modern times.

engravings show some new designs in ware. They are what is known as Albertine relief ware, and consist of plain pottery decorated with raised flowers. Figures 1, 2, 3 and 4 are

designs of ornamental vases. In shape, the one having a square form tapering at the top is perhaps the most novel. These goods may be enameled with a glazing preparation by the purchaser, if desired, though this will hardly be found necessary. Yet, if preferred, the glazing can be conveniently applied, as it requires no baking, while it leaves a hard glossy surface. Applied to the interior of vases, it makes them waterproof. It is, moreover, only necessary in applying it to use a camel's-hair brush. F. W. Devoe & Co. are dealers in this line of goods.

MARBLEIZING GLASS.

A method of "marbleizing" glass consists in applying a mixture of varnish and oil to the surface of water of proper extent and spraying or blowing upon the layer film or drops of oil and varnish dry colored powders to represent the mottled, speckled, veined or other appearance of marble or other stone.

The glass is prepared by being coated upon one surface with varnish or Japan, and is then placed upon the powder supported by the oily-surfaced water, and the powder immediately

adheres or fastens itself to the varnish or japan on the glass.

The apparatus for distributing the color consists of a spraying device or distributor having a receptacle for the composition, which is introduced through a hole covered by a perforated cap. There is a diaphragm with holes or perforations, which are closed by a slide. This diaphragm separates the space containing the mixture from a passage or extension, the end of the casing of the passage being contracted sufficiently to fit upon the end of the bellows. To operate this device the receptacle is filled with the composition, the cap is secured in place, and the slide lifted. The bellows are then operated and the pressure of air drives the mixture in fine spray or drops upon the surface of the water.

The device for applying the dry colors to the floating sheet or drops of oil and varnish is similar to that described; but in order that a number of colors may be sprayed or blown upon the floating oil and varnish at the same time, the receptacle is divided at the end into two or more parts, and a shaft, having agitators, is extended through them. The air is forced by

bellows or other suitable means through perforations in the diaphragm. Caps cover the various chambers, &c., and are perforated to ad-

mit of the escape of the powder. In operation, the air from the bellows or other source enters the perforations in the plate, and passing through the chambers, &c., causes the agitators to lift the powder and agitate it, and, at the same time, the air-pressure forces the powder through the perforations in the cap in fine streams or dust, and of course by moving the distributor the dust may be distributed upon the floating oil and varnish as may be desired.

It is obvious that the design of the marble, stone, or other article is produced upon the floating body of oil and varnish before it is applied to the glass; and it is also obvious that by coating the surface of the glass with varnish or other adhesive material of a like nature, upon placing the same with the surface having the varnish or adhesive material down, so that it shall be brought in contact with the coloring matter held by the floating surface or layer of oil and varnish, the coloring matter will immediately adhere to the japan or other adhesive coating, and will thereby become fastened to the glass, so that upon the removal of the glass the design laid out upon the floating layer of japan and oil is removed from the water, together with such of the floating oil and japan as unites therewith.

Of course the coloring or mottled or other appearance of any marble or other stone, or of any other material, may be reproduced upon the glass by this process, as it will only be necessary to change the dry colors to correspond to those of the stone or article to be imitated or copied.

To think we are able is almost to be so; to determine upon attainment is frequently attainment itself. Thus earnest resolution has often seemed to have about it almost a savor of omnipotence.

Beware the fury of a patient man.

ENGLISH HAND-MADE PAPERS

ORIGINAL
EYNSFORD
MILLS,

F

WATER-MARK:

ELLOWS

KENT,
ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers. For Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

A PATENT OFFICE DECISION.

Commissioner Marble has rendered the following decision in an appeal from the decision of the Examiner of Trade-Marks refusing registration of "an ornamental book-cover having projecting beyond the edges thereof silk or other fringe."

The Examiner refused registration for two reasons: *first*, because the book-cover described is anticipated by Design Patent No. 13,040, to G. Bourck, dated July 18, 1882; and, *second*, because the book-cover is not a trade-mark. The book-cover here claimed is in all essential particulars the same as the card-cover patented as a design to Bourck. Bourck has the right under said patent to use his design not only as a cover for cards, but for books as well. There can be no question that the subject matter covered by Bourck's design patent was properly patentable as such.

While it is true that a design may be used as a trade-mark, and that which is properly the subject for a design patent may also be the proper subject for a trade-mark, still the office, after having adjudicated certain subject-matter patentable as a design and granted a patent therefor, thereby giving the patentee the exclusive right to use the same for the term of years mentioned therein, cannot register as a trade-mark substantially the same design and give to another and different party the right to use it as a trade-mark. Conflict in the rights of parties would at once arise. One would claim that he had the right to sell his production under his trade-mark and the other under his design patent. The office should not knowingly bring about such a controversy.

Bourck filed his application long before Lee & Shepard's application was filed, and took his patent in the regular course of proceedings. The office will do nothing to cast a shadow upon his title to the invention covered by his patent.

As the decision of the Examiner must be affirmed on the first point, it is unnecessary to consider the second. The decision is affirmed.

THE GLOBE LIBRARY FILES.

In all libraries a considerable amount of valuable printed and written matter accumulates, which cannot conveniently be placed on the shelves with books, and which, by the ordinary methods, cannot be arranged so that any desired pamphlet or other paper can be readily found, examined and replaced. Among the numerous papers and publications which thus constitute a large part of every library are magazines, monographs on law, medicine, divinity or scientific topics, addresses, speeches and other pamphlets, engravings, maps, portraits, newspaper clippings, articles in manuscript, notes and memoranda, catalogues, &c. These are usually tied up in bundles and stowed away in the unsightly cupboards on which bookshelves are generally mounted, and which add nothing to either the appearance or utility of a library. The purpose of the Globe Files Company's system of files is to arrange, classify, index and bind up all these various printed and written papers, so that they may be preserved in a neat, orderly and convenient manner, and add to the value of a library. This is done by the

construction of files in book form, in handsome and appropriate styles of binding, with systems of indexing for the various classes of papers. In this manner all unbound books and papers are placed upon the shelves and not under them. The novelty, utility and beauty of these files, together with their cheapness, will commend them to the public.

FANCY PAPER LAMP-SHADES.

Something inexpensive and yet ornamental has been needed in paper lamp-shades for some time. Hitherto most fancy lamp-shades, such as those perforated with various designs of flowers and figures and those ornamented with rich colored engravings, have been imported. A lamp-shade made of fancy paper, folded in a novel manner, is the product of American industry, and is much cheaper than the imported article, though fully as ornamental and more durable. The shade comes in four delicate shades of red, blue, pink and green. It also comes in three different styles, style No. 1 being an ordinary ten-inch shade. No. 2 is made to fit a student lamp, and is so formed that it does not interfere with the metal upright. The No. 3 is very fancy, being of a square shape with curved sides, thus giving the four corners sharper and more fancy points. This style is intended for very handsome lamps, having a ten-inch shade. These goods are very fine and attractive and possess that feature so much desired by the trade, namely, novelty. They can be had of F. H. Loss, Jr., 46 Murray street.

The chromos and art novelties which L. Prang & Co. have brought out this season fully sustain the well-earned reputation which this firm has secured for superior productions in this line. The Prang Christmas art prints on satin are made up in an elegant and superior manner. All have heavy double-silk fringe, cords and tassels, and the designs are by the most celebrated artists. These souvenirs can be either single or folding, the latter having a beautiful leatherette protector. The single prints are intended for standards and easels, which, if desired, are furnished with them. A special feature of these cards are highly ornamental backs, which add not a little to their artistic value. "Aladdin's Lamp," one of the leading designs in these goods, is a most elaborate and elegant gift-card, heavily fringed and artistically finished. The front outside page has a design of peacock feathers on satin; the left inside page contains a poem specially written by Joaquín Miller, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent artist, Elihu Vedder, and to complete the whole the book is embellished, with a most unique and artistic design on white satin. It is needless to say, also, that the large line of birthday, congratulation and condolence cards, as well as the numerous art novelties which L. Prang & Co. are offering this season, are creditable in every respect and deserve the attention of buyers.

Enjoy what you have; hope for what you lack

DOUBLE PAGING MACHINE.

THIS Machine pages both sides, or Two Leaves, at the same time, in ONE OPERATION, by one operator, at the rate from 80,000 to 90,000 per day, SIX TIMES as fast as any machine known. No mistakes can be made, as the figures are in an endless chain. Printing Ink used. It pages Consecutively and Folio. The Figures are printed on a perfect line, and there is no breaking of the paper. Any Figure can be replaced at a trifling cost. All small parts are made of Steel Castings. The Books are paged after they are bound. The outline of the figures are far more handsome than hand-cut ones. The DOUBLE PAGING MACHINES, as here illustrated, are well and thoroughly made, and will stand a great many years of the severest work.

THEY ARE USED BY ALL THE LEADING BLANK-BOOK HOUSES IN THE UNITED STATES OF AMERICA, and some of the larger houses in Europe. For Catalogues or other information, address

JOHN McADAMS SONS,

No. 528 Kent Avenue, Brooklyn, N. Y.

THE STENOGRAPH.

This machine is to shorthand writing what the type-writer is to the pen. By a very simple system of signs it substitutes mechanical uniformity for the loops, curves, lines and hooks of the pen and pencil systems.

The stenograph is the invention of M. M. Bartholomew, of Belleville, Ill., who had already written Pitman's system of shorthand several years as court reporter before he conceived the idea of the stenograph, and whose acquaintance practically with the pen and pencil systems has done much to make the stenograph so successful in its work. Speed and legibility are the necessary elements in a system of shorthand. It is equally disastrous for a stenographer to write too slowly, and for him to write so that he is unable to read and correctly transcribe his notes. The stenographer possesses

both of these necessary elements, and has other points of excellence, which will be mentioned after a brief description of its construction and operation.

A glance at the machine or the engraving of it will show that there are apparently nine keys by which the writing is done. There are, however, but five keys, which control the five markers by which the writing is done. The four finger-pieces to the left of the centre or thumb-key are duplicates of those to the right, and control the same markers; each marker being at the point of a V shaped key, which is controlled by two finger-pieces. These markers, when their respective keys are struck, press the inked ribbon against the paper roll and so print the particular letter. The letters are each formed by a single stroke of one or more keys, and, by the use of these markers, singly and in combinations, all of the letters are produced. Each time a letter is struck the paper moves forward automatically. The spacing key moves the paper only, and is struck after every word.

Each line of marks or dashes, across the paper-roll, constitutes a letter. By writing phonetically and omitting vowels which can safely be supplied in transcribing—though this is not done to so great an extent as in other shorthand systems—a speed equal to the best shorthand is obtained. Each finger of both hands has its own particular finger-piece, and by controlling the same markers with both hands, as explained above, almost double the speed attainable with one hand is secured. The operator uses his hands alternately, the same as he does his feet in walking, forming one letter with the right hand, the next with the left hand, the next with the right, then the left, and so on. The alphabet includes the characters Th, Sh and Ch, in addition to the usual twenty-six letters.

The advantages are said to be, first, accuracy and consequent legibility of the stenograph's work. It makes no difference whether the keys are struck by a child or a middle-aged man, or

whether they are struck by a rapid operator or with the utmost deliberation, the keys make in all cases exactly the same marks upon the paper. Its work is mechanically exact and uniform. In all other systems of shorthand, shading, position, slant and length play the most important parts, and the difficulty reporters experience in reading rapidly written notes is proverbial; and even the most expert writers will not pretend to write so that another can safely transcribe their notes. Shorthand with the pencil is of necessity as different in different hands, and as liable to be indistinct when written at a high rate of speed, as ordinary longhand writing. A glance at the stenograph's work shows how powerless these objections to stenography are against it.

Each letter is always the same, entirely legible, and consequently one operator can read another's notes, or one who is not an operator can, in one or two evenings, master the alphabet and transcribe notes into longhand.

It can be learned in one-third the time required to learn any other system of shorthand writing. This is a fact of great importance to beginners. What one can do with other systems in nine months can be done, it is claimed, with the stenograph in three months, and the same is true of any greater or smaller period of time, up to a high rate of speed. The reason of this is the extreme simplicity of the stenograph system of shorthand. The alphabet can be mastered in from two to ten hours. The method of spelling is extremely easy to acquire, and all that is then necessary is to practise for speed.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

— ROUTE! —

THE GREAT THROUGH ROUTE

Between the EAST, WEST, NORTH and SOUTH. This Great Through Route is now completed and in full operation, RUNNING THROUGH PASSENGER TRAINS DAILY as follows:

Three solid trains each way between Columbus Indianapolis and Peoria; two trains each way between Columbus, Indianapolis and Decatur; two trains each way between Sandusky, Indianapolis, Peoria and Decatur; two trains each way between Sandusky, Dayton and Cincinnati; three trains each way between Sandusky, Springfield and Columbus; four trains each way between Columbus, Springfield, Dayton and Cincinnati; two trains each way between Columbus, Springfield, Indianapolis and Chicago—with Sleeping and Reclining Chairs on Night Trains, and elegant Parlor and Modern Day Coaches on Day Trains.

Its track is laid with HEAVY STEEL RAILS, thoroughly ballasted, with easy grades and few curves. Traversing as it does the heart of the three great States of Ohio, Indiana and Illinois, uniting in close business relationship the capital cities of the first and second, with the second city of the third, and passing through a large number of the most important cities and towns in each, and with all its central location makes it the Shortest and Most Desirable Route between the East and West.

THROUGH TICKETS and BAGGAGE CHECKS to all principal points, NORTH, SOUTH, EAST and WEST, can be obtained at any ticket office of the I., B. & W. R'y; also via this Route at all railroad offices throughout the country. Rates always as low as the lowest.

Don't purchase tickets to any point without first consulting the Agents of the I., B. & W. R'y.

Particular advantages offered to Western Emigrants. LAND and TOURIST TICKETS to all points reached by any line.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—Ex. U. S. Minister, E. B. Washburne.

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—New York State Engineer's Report for 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a **flexible** air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with Iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

THE "STANDARD," NOISELESS SLATE.

There is no article of school stationery more necessary than the slate. Next to the text-book the slate is probably the most useful article in the school-room.

Slates are made with various improvements. There is the slate with the patent pencil-holder, the unbreakable slate, the double or book slate, and other varieties of patented and improved slates, which have been before the public for a long while and which are very good in their way.

But, in all of these articles one defect was overlooked. This was the tendency to produce

fill the first orders received for the slate. Letters received from leading stationers throughout the country speak in the most flattering way of the manner in which the noiseless slate has impressed them and their customers. From the very favorable opinions expressed it is safe to predict that the "Standard" noiseless slate will prove a standard article both in name and character.

THE "OTTO" SILENT GAS ENGINE.

Since the "Otto" engine was first invented in 1876, the adoption of gas power has grown steadily, and on account of the many advantages

valuable, however, more on account of their constant readiness to start and perfect cleanliness than on account of any other advantages.

A gas engine is indeed started without any of the preparations necessary to raise steam in a boiler. It suffices to turn on a gas-cock and turn the fly-wheel when it continues to run. Should, after a few hours' work, the power no longer be required, the engine can be stopped without loss of fuel, as the closing of the gas-cock stops its motion together with the flow of gas. While in motion the gas consumption is regulated by a governor in proportion to the load on the engine, the engine taking but little gas when under a light load or without any load at

THE "OTTO" SILENT GAS ENGINE.

noise whenever brought in concussion with other objects. What teacher has not had his or her patience taxed and wearied brain racked by the clatter of slates in the hands of a room full of pupils?

This great cause of perplexity to teachers was left to be overcome by future improvements in the slate. The question how to do it was practically solved by the inventor of the noiseless slate, which has recently been put on the market.

The "Standard Noiseless School Room Slate," manufactured by the Standard Slate Company, is said to be the only perfectly noiseless slate in the market. It is claimed that the principle employed to make it noiseless is the only correct one for the purpose. The slate is provided with a metal frame, which is made in two sections, coming together at the top and bottom of the slate, and counter-sunk and riveted, making an imperceptible joint, thus effectually preventing the frame from coming apart. The metal frame is covered with tubular braid necessarily secured to it in such a way that it cannot rattle or become loose. The braid covering the frame is in bright, plain and mixed colors, making a very attractive article. The slate is made of first-class material, is neat, durable light and convenient to carry. The company has just begun to

it offers to stationers and printers in particular, it has been thought worth while to present a description of it in the columns of THE STATIONER for the benefit of those of our readers not acquainted with the engine already.

The illustration gives an exact representation of the "Otto" gas engines of 2 to 10 horse-power, while the large sizes up to 25 horse-power differ somewhat in construction. The characteristic feature of these engines consists in the absence of a boiler and consequent avoidance of coal, ash, engineer's attendance, water rent, dust and dirt. The power is produced in the cylinder of the engine itself, into which a peculiar mixture of coal gas as furnished by the gas companies through city mains and of the air which surrounds us is drawn and fired, being put in contact with a small gas-jet which is kept burning for this purpose at the extreme end of the cylinder. The firing of this mixture is followed by a large development of heat through which the air in particular is caused to expand—producing pressure to propel the piston. Through the absence of a boiler, disastrous accidents are made impossible, and as cinders do not result from the working of a gas engine, the risks of fire are reduced considerably and insurance policies remain unaffected where a gas engine is adopted. For stationers and printers the engines are

all. This feature has caused the adoption of gas-engines for elevator work, which is very varying in its loads, while the engine consumes only gas for the average power produced. Those interested in a power of the above description will do well to address Schleicher, Schumm & Co., the manufacturers of the "Otto" engine at Thirty-third and Walnut streets, Philadelphia.

Amberina is a new fancy glass, exquisite in coloring, showing every conceivable gradation of tint, from a bright amber to a dark ruby. The bowl of a wineglass, for instance, resting upon a cut stem, has a rich wine-color at the bottom, but gradually dissolves into amber at the top.

A drawing-room wall-paper represents antique damask. The ground is ivory tint with conventional flowers of warmer shade of ivory. The ceiling a very pale shade of blue sprinkled with gold. A black wood with gold molding should edge the frieze made to match the paper. Another has bronze and copper effects on a pale-olive background; with this is a frieze introducing Indian red. The rich red of rust color is mingled with burnished silver upon neutral tinted grounds, and papers in faintly perceptible shades of gray or blue or green have Japanese designs of flying storks, or geometrical patterns in dull gold.

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.

One-half the time and three-quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

DOUBLE PAGING MACHINE.

A double paging machine is manufactured by John McAdam's Sons, 528 Kent avenue, Brooklyn, N. Y. This machine pages both sides, or two leaves, at the same time in one operation, by one operator, at the rate of from 80,000 to 90,000 per day. This is six times as fast as can be done by any machine known. It pages consecutively and folio. The figures are printed on a perfect line, and there is no breaking of the paper. Any figure can be replaced at a trifling cost. All small parts are made of steel castings. The books are paged after they are bound. The outline of the figures are far more handsome than hand-cut ones.

The double paging machine is well and thoroughly made, and will stand a great many years of the severest work. It is used by all the leading blank-book houses in the United States of America, and some of the larger houses in Europe. In this machine an endless chain, composed of flat jointed links about an inch in length, moves over a number of wheels. On each link of this chain is an odd and even number. The book to be paged is placed on the table of the machine, and the person who serves as feeder presents each leaf in turn to the action of the numbering device. The first leaf to be printed is placed over the first odd number on the link, and the number is printed by a jaw or pressure device which is operated by the treadle pressing the leaf upon the number on the link which is properly inked for the purpose. The link which carries the number 1 also has the number 2. The latter passes over the type shaft and remains at right angles to the endless chain until the second link, bearing the numbers 3 and 4, comes into position, and the upper and lower jaws bring the numbers into contact with the pages and prints the even and odd numbers, 2 and 3, at one time. This is followed up successively until the book is paged to the end.

The table is so constructed that it sinks at every impression to a distance about equal to the thickness of a sheet of paper so that the leaves to be printed are kept level with the chain. A hand-roller is used to apply the ink to a wheel which carries it to a rubber roll which in turn receives and distributes the ink evenly over the endless chain. A plate over which the rubber roller runs helps to distribute the ink. Every figure is inked seven times before it is used. The machine is worked by a treadle. Its method of operation is quickly learned, and a skilled female operator can by its aid page a book with a rapidity that is surprising.

Rubber rings sometimes become hard and useless. Their elasticity may be restored by allowing them to remain for half an hour in a small quantity of water and ammonia, about twice as much of the latter as of the former in the mixture.

A small banner screen is suspended from fixtures of ebonyed wood and gilt. Upon a ground of soft gray silk, streaked with Japanese touches of silver to represent the clouds, is a moon embroidered in fine white silk. Five flying bats, one of them crossing the moon's disk, are worked in shaded gray and black.

Striking Head Lines

Are used to call attention to the fact that this is an advertisement of the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

Its EIGHT Trunk Lines Traverse the best portions of NORTHERN ILLINOIS, WISCONSIN, MINNESOTA, DAKOTA and IOWA.

Located directly on its lines are the cities of CHICAGO, MILWAUKEE, LACROSSE, WINONA, ST. PAUL, MINNEAPOLIS, MADISON, PRAIRIE DU CHIEN, MASON CITY, SIOUX CITY, YANKTON, ALBERT LEA, ABERDEEN, DUBUQUE, ROCK ISLAND, CEDAR RAPIDS, and COUNCIL BLUFFS, as well as innumerable other principal business centres and favorite resorts; and passengers going West, North, South or East are able to use the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY to the best advantage.

Ticket offices everywhere are supplied with Maps and Time Tables which detail the merits of the line, and agents stand ready to furnish information, and sell tickets at cheapest rates over the CHICAGO, MILWAUKEE & ST. PAUL RAILWAY.

IMPROVED PERFORATING MACHINE.

Herewith is given a representation of an improved perforating machine for checks, stubs, labels, &c. The machine is carefully and accurately constructed, and is of sufficient weight to insure strength and durability. The frame is of a handsome pattern, highly finished. The table is black walnut and has the most improved adjustments, front and back, to gauge and square the work, besides a tray to catch waste and thus prevent it from scattering over the floor. The shafts of the machine are of steel with adjustable bearings to take up wear. The punch-plate and stripper are also of steel and hardened.

A most useful and ingenious arrangement is attached for stopping off or connecting one or more sections of the punches without removing the punches from the machine. This is effected by drawing forward the slides, which are over the punches, and pushing them back to connect again. The slides can be removed at either end of the machine, or in the centre. The machine is made with as many removable sections as desired.

The punches, when worn, can easily be filed by removing the punch-plate and stripper together and then screwing the punch-plate upon the top rail of the machine, which is prepared especially for that purpose, with a contrivance for holding the heads of the punches, so that when filed in that position they will be of two alternate lengths, thus perforating a greater number of sheets with less labor. The punches are round, are made of any size and any number to the inch to suit the purchaser. These machines are built either for hand, foot or steam power. The manufacturer is E. B. Stimpson, 31 Spruce street, New York.

"NUTMEG" RESERVOIR PEN.

One of the latest forms of fountain pens is illustrated in the engraving. As its name indi-

from the reservoir unless pumped from it by the action of the pen itself. One principal feature is that the user is not tied down to an arbitrary pen which is made for and is a part of the complete article, as any ordinary gold or steel pen can be used at will, for a change of pen in no way affects the perfect working of the feeding springs, thus insuring individuality of writing. Any ink, from the thickest copying ink to the lightest writing fluid, can be used with the same results. The pen is always ready for instant use and is said never to clog or get out of order. By its use, inkstands are dispensed with. The

IMPROVED PERFORATING MACHINE.

aim of construction in this pen is to have the pen in the same condition when in use that it would be if freshly dipped into ink. By turning the pen point upward the ink runs back into the sleeve. It does not run back into the reservoir, as the reservoir is shut off from the pen when the pen is at rest. The ink which was in the pen remains in the slotted tube ready to flow

to the wall by fasteners in the top. To those having a small collection of books, which they desire to keep in some handy place for reference, the "Robinson Crusoe" will prove very useful as well as ornamental. F. H. Loss, Jr., has it.

IMITATING HARD WOODS.

To imitate rosewood great care should be taken in correctly glazing, blending and blazing. This caution holds good in imitating mahogany and oak. Glazing colors are transparent, thinly mixed. In mahogany glazing add a little asphaltum to the grain color, which is burnt *terra de sienna*; also add ale to this mixture until it is quite thin; rub it over the wood. Asphaltum for glazing must be dissolved in turpentine, and it is well to add a little boiled oil to check it from drying too soon. To produce a fine rosewood out of ordinary pine make the ground-color rose pink. This is mixed with asphaltum; the grains are put in with pencils such as are used by professional grainers; the knots and shadows are wiped out with a bit of rag or sponge in patches to suit the fancy. Blend crosswise in imitating mahogany. Maple wood is very handsome and not difficult to imitate; the grain color is raw sienna and raw umber mixed well together, wipe out the lights with a bit of buckskin, the edge of which gives the curl natural to this kind of wood; varnish, and when dry dampen with the grain color, which is made thin by the addition of a little asphaltum; wipe out the large light patches with a

sponge, and then blend the light by crossings; when dry use the glaze-color for a grain finish. If the bird's-eye effect is desired, take a wet sponge and wipe out specks of light after the grain-color is laid on; blend the whole, and dot it with the ends of the fingers, and then lightly blend, which is the finishing process. Oak for a dining-room is

THE "NUTMEG" RESERVOIR PEN.

cates it is a reservoir pen with an automatic feed, which is said to be perfect, the flow of ink being entirely under the control of the user. The pen case is of hard rubber, the feeding springs and adjusting bolt are of gold and the entire interior of pen case is utilized as an ink reservoir, from which the ink is carried to the pen by the vibration of the feeding springs, which pass through a slotted tube and rest on the nibs of the pen. The flow of ink is governed by the extent and frequency of these vibrations, which are caused by the bending of the pen in the act of writing. A slight touch of the pen on the paper will produce a hair line, while a heavier stroke increases the flow, so that the finest or broadest line can be produced in the ordinary manner of writing, and no ink flows

into the pen for immediate use, while the action of the pen in writing is pumping more from the reservoir to take its place. The Automatic Pen Company, Norwich, Conn., is the manufacturer.

THE ROBINSON CRUSOE BOOK SHELF

A very useful article in the shape of a patent portable book-shelf is called the "Robinson Crusoe," and since its introduction in the trade it has become a standard article. The shelves are hard maple, nicely varnished. The uprights are of Japanned iron. The shelves can be adjusted to fit any size of book, and the whole can be folded into a very small compass, making it light and convenient to carry by hand. The shelf can also be attached

handsomely imitated. Paint with a mixture of chrome ye' low and Venetian red; the grain-color is raw umber and raw sienna, made light and brilliant with whiting mixed with boiled oil. Paint over the wood and comb while damp, first lengthwise, and then run the comb with a trembling motion over the same crosswise. Carefully wipe out the grains of light; hold the cloth over the thumb nail, changing its position at every touch. After glazing with asphaltum, wipe out large patches of light, and with a sash tool darken other spots. The grain-color for imitating walnut is burnt umber; the ground color is made of Venetian red, black and yellow ochre, equal proportion, well mixed. Take a flat brush and a piece of buckskin for wiping out the lights.—*Commercial Advertiser*.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD and LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

Correspondence.

CINCINNATI ITEMS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, November 12, 1883.

How Cincinnati did blossom in the holiday number of THE STATIONER, which came in late last week glowing like a meteor. The Globe Files Company on one flank and John Holland on the other, with Russell, Morgan & Co. in the centre; and distributed on the right and left wings the Cincinnati Paper Novelty Company, Robert Clarke & Co., Louis Snider's Sons, Samuel C. Tatum & Co., Black & Clawson Company, of Hamilton, the Harding Paper Company, of Franklin, and a detachment of the Globe Files Company. Here is an array of attractions for you—a marshalled line not easily broken. Think of the capital it represents. Make an observation of the labor it employs. Take note, boys, of the veterans in that line, who, by dint of native talent, acquired skill and persistent industry have builded up a splendid business for themselves and for the community in which they live. Ponder for a moment on what charities they bestow in supplying luxuries, conveniences and necessities which go so far toward making human life comfortable and happy. And the courage, too, represented in this line is a thing not to be spoken of highly. Only brave unflinching fidelity to duty, can build up such a business as is here represented. Cowards, laggards or sluggards can't accomplish such feats. Nor is it the mere mechanical product of patience and toil that is represented in this array which Cincinnatians offer with so much confidence to the public. Not one of these products but is the crystallization of human thought. And the art elements, whether in the form of a copying-press, the tint on a sheet of paper, the designs in the binding of a book or the decoration of a cabinet, are all the expressions of refined taste. Trace all of these products back to their beginnings—these products offered by the Cincinnati brigade—and aggregate the taste, the skill, the invention, the thought, the toil expended in their production, and you, or I, or whoever follows out this line of investigation, will return from it wiser and perhaps humbler men. In whatever direction we follow it, whether back toward the starting-point or forward to the destination, we shall find enough to engage our thoughts and excite our admiration. It will tell us forcibly how far human progress has advanced beyond the fig-leaf, the stone-axe and the wigman periods. But let us get out of this reverie.

Here we are out of it, but where are we after all? Let us see! Have I mentioned the Globe Files Company? Let us assume that I have not. What is the use? Everybody is talking about it. Suppose we let them keep on talking. It seems that they like the topic and it gives us leisure for something else. But, in the meantime, everybody is enjoined to bear in mind that there is such a company and that it has a factory in Cincinnati on which it has just put a mansard story, and that it is turning out beautiful and serviceable products and is growing every day in public favor.

Business in some lines is brightening up admirably. The carrying Southward by river is remarkable. Every day the hoot-toot-toot of some new steamer arriving or passing is heard and the old-timers are puffing and snorting like enormous porpoises. On next Sunday the first train through from here to New Orleans by an almost air-line route will leave the city. This route by the Cincinnati Southern, the Alabama Great Southern and from Meridian to New Orleans by the New Orleans and Northeastern makes the distance between Cincinnati and New Orleans 763 miles instead of as in the past 859 miles. This is a gain of 96 miles for Cincinnati, all Ohio, all Pennsylvania and New Jersey and for New York and all New England.

The receipts of new-crop leaf tobacco in this market are one-third larger up to this time than they were of that article to the corresponding date last year, and the prices are high. The weather has been too warm for pork-packing until to-day—in fact, too warm for business generally. Last night a spurt of real freezing winter came, and to-day business is the brisker for it. It is the season now for cold, and if it will only stay awhile, it will prove just the tonic that trade needs.

The following-named trade visitors have paid Cincinnati a visit within a short time past: From New York—Frank C. Johnson, from Liebenroth, Von Auw & Co.; R. E. Bennett, with the Palmer Art Company; W. H. Sears, of the Acme Stationery and Paper Company; Will F. Park, of Watson & Park, and some one representing the houses of Mabie, Todd & Bard and John B. Davids & Co. From Brooklyn we have had W. A. Sanders, of the Brooklyn Rubber Works. From New Jersey the visitors have been: T. S. Buck, of Lambertville Rubber Company; J. B. Chadwick, of Dixon Crucible Company, Jersey City, and George A. Clark, of Reilly & Mackin, Newark. From Philadelphia came E. H. Smith, for the Hampshire Paper Company; and from Holyoke, Mass., R. C. Chapin, for the Judd Paper Company.

PRINCE WILLIAM.

BOSTON NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE LOCKWOOD PRESS,
49 Federal St., BOSTON, November 12, 1883. }

"He that bloweth not his own horn, the same shall not be blown by others," is the subject of my opening discourse, which has been suggested to me by interviews lately had with a number of Boston merchants representing the business interests covered by THE STATIONER. Notwithstanding that this city offers the trade a line of goods which for quality and prices will compare most favorably with any market in this country no concerted effort on the part of those most interested seems to be thought necessary to acquaint the world with this fact. Trade journals, having for their special objects the enlightenment of the world concerning some mercantile or manufacturing industry, are so filled with well-displayed announcements of New York and Chicago houses that one would think those cities had a monopoly of such business. Of course, such enterprise on the part of those cities is to be commended, and if they can by their frequent advertising convince buyers that they are the places to trade in, they reap the benefits of a continually increasing business, while less progressive markets report—"local demand good, but outside orders falling off." As long as I represent Boston's interests with THE STATIONER, just so long will I be found writing up the trade facilities of this city, that buyers may learn of the advantages offered here in the way of trade. In my last communication (for the holiday number), I endeavored to give some idea of the facilities possessed by some of our business concerns for transacting business, but had these same concerns taken advantage of that special issue and made special announcements to the trade, my remarks might possibly have had more weight as they would have been verified.

In the way of stationery, envelopes, blank-books, scrap-books and albums, pens, inks and mucilage, cards, chromos and shape-goods, printing, engraving and lithographing, fancy novelties, domestic and imported, artists' supplies and school-furnishings, book-binding and publishing, and, in fact, every other interest covered by THE STATIONER, this city need take no second place, and I contend that if each and every one would address the trade through THE STATIONER, buyers would find out that Boston was a pretty big market, and a market that they could not very well afford to ignore. Some of these business houses, which make some particular line a specialty, are enterprising, pushing and progressive, their trade extending

far beyond New York or Chicago, and their announcements of new specialties are frequently met with in such journals as best serve the purpose; but there are others who seem content, so long as their names remain over the door as a mute reminder to their friends that they are still there, and some of their friends even wonder how much longer they will be able to stay there. Then there are others, who, when they were younger, worked up a big trade, which they expect will continue without any extra effort, forgetting that as those old customers pass away strangers are filling their places. Some, I find, are doing such a business that they don't dare have their name mentioned for fear that it might bring more business, and it would tire them much to attend to it. With these few remarks as a preface, let me note a few of the live concerns.

Chas. H. Whiting is of that class which can stand favorable mention, and is prepared to enlarge his facilities as the demands of trade increase. He reports business for the past few weeks as good, and has stocked up with a varied line of holiday books in expectation of a large Christmas trade. For the proper displaying of these books large ornamental glass show-cases have been just completed and placed in position. One of the holiday books which this house will present to the trade in a few days is titled "Those Dreadful Mouse Boys." The work is now in press. It is profusely illustrated, and will undoubtedly have a large sale, as it cannot fail to interest the juvenile readers.

H. H. Carter never complains of dull times, for when he isn't selling goods he is out ordering more. That big lot of holiday cards he stocked up with, about a million of them, selected from such noted publishers as Prang & Co., Marcus Ward & Co. and Hildersheimer & Faulkner, are about half gone. The trade find his figures so low on all kinds of fancy, plain and fringed cards, that big orders are daily filled. Mr. Carter has introduced to the trade something that is very novel in the card line, it being imported and handled only by him. The cards are known as "The Antiques." They are decidedly unique and inexpensive, and wholly different from anything heretofore placed upon the market. The material upon which they are printed, the quaintness of the verses, the old-style spelling and ancient decorative art, combine to make them attractive and interesting. Just conceive the kind of a Christmas card our grandmothers would have had, and you get some idea of "The Antiques." Well, they are quaint, and I might say look very ancient. Over 7,000 roll-calendars, for which this house is sole agent, have been sold, and the demand so continues that a new edition is contemplated. A stock of 100,000 Easter cards, placed in stock some ten days ago, are cleaned out. With a good trade also in stationery, Mr. Carter feels justified in reporting business good.

In shape novelties, J. Baird has a stock that can't very well be excelled. Quantity enough to fill the largest orders, and designs enough to bewilder a buyer. One of the designs, an old-fashioned octagon-shaped clock, is new and very pretty. The "Liberty Bell" is very handsome, and it is an instructive card, giving a view of the evacuation of the British troops and the triumphal entry of Washington into the city of Philadelphia. Such inscriptions as the old liberty bell bears are reproduced upon the card. The lines of Christmas cards which the house has in stock are extensive and varied. Double the business of last year is now being done in holiday cards. Frosted cards are having an excellent sale. The increased demands for

cards this year was hardly expected, and importers only ordered what they thought the trade would want. The season is now too far advanced to duplicate orders, and so the domestic cards will be well worked off.

Carrol W. Clark, successor to the New England School Furnishing Company, has found it necessary to stock up again in school supplies. His line of globes is again complete which embraces a number of different sizes. The most complete variety of book-holders to be found anywhere in the city are displayed in this establishment. This house is handling a new patented article for covering blackboard. It is an artificial stone slating, a pure chemical compound, and is applied with a plasterer's trowel instead of a brush in the usual way. The preparation can be applied to wooden walls or to plaster. The color is a fine dull black, and will not grow glossy with use. Mr. Clark claims that he will soon work a revolution in blackboard surfaces with this preparation.

Lockwood & Brooks are having a special sale of books in order to lighten stock. Some very choice works are marked down very low, and the shelves that line the front of the store upon the sidewalk are being quickly thinned out. People don't object to getting good reading matter cheap.

Elroy N. Heath has found such a demand for his improved indexes and letter files that his limited resources were inadequate to supply the trade, and in consequence H. F. Hosmer has become a member of the firm, which in future will be known as Heath's Letter File and Index Company. With increased facilities for manufacture, and with Mr. Hosmer's personal attention to the business, the trade in future will experience no delay in having orders quickly filled. These letter files and indexes are very generally in use throughout this section, and being so highly commended are finding their way into remoter sections; so to meet the wants of the growing trade the change noted was necessitated.

A. L. D.

POST AND PINCHED POST.

Pinched post resulted from the double invention of paper-making machinery and paper-cutting machinery. The former overcoming the waste of the unfinished deckle edge of paper made by hand, and the latter (which was introduced by George Wilson, of St. Martin's Court), saving every second shaving which the plow-cutting press necessitated. We still take our sizes, however, from the hand-mold deckle, and call post $19 \times 15\frac{1}{4}$ and large post $21 \times 16\frac{1}{2}$. Country travelers representing some of the first houses in the paper trade show samples accordingly, although the reams, when cut up and retied, measure no more than 19×14 . Indeed it is useless to send out post-octavo larger than $4\frac{1}{2} \times 7$ if it is to be used with the standard sizes of envelopes. Forty years ago when I was placed under a very good cutter to learn all he could teach me, I well remember that, with the plow we could never clear the edges of octavo-post without cutting it down to $4\frac{1}{4}$ inches. The margin now allowed for cutting is needless, and leads to dishonest practices in many ways. I see no reason to declaim against the paper-merchant or the paper-maker if the former, having, probably, as good a knowledge of paper-making as the latter, chooses to introduce a specific article, and to employ whom he pleases to make it. He takes the full responsibility of guaranteeing what he introduces, and, if his judgment be good, he alone is entitled to the credit and profit of his venture. But, on the

other hand, I do see great reason to complain of paper-makers accepting orders to be falsely labeled. I shall not, however, diverge upon this question from the limit I have assigned of "post and pinched post." There are, of course, few men among our leading makers who would descend to the wishes of some dealers in respect to false marked weights; but it is out of any maker's power to prevent post and pinched post of their respective weights contributing to unsuspected mischief. While post-papers are made, some by hand and some by machine, it has by many been deemed impossible to name uniform marketable sizes, or they would long since have been adopted. I see no reason, however, why the standard sizes of machine-made post-papers, which are so very largely in excess of those made by hand, should not now undergo some revision. The only obstacles is the present limited use of "full size" post for quarto copy-books and the like. But an alteration of the present sizes of machine-made post does not necessarily imply an undesirable change in the shape of either the quarto or octavo. On the contrary, I think the graduation of the four leading sizes of writing-paper, post octavo, large post octavo, post quarto, and large post quarto, would be greatly improved by shortening the folio of both post and large post one inch. The present standard sizes are $15\frac{1}{4} \times 19$, and $16\frac{1}{2} \times 21$. If such a change could be made with the general approval and consent of the trade $14\frac{1}{4} \times 19$ and $15\frac{1}{2} \times 21$ would have a sufficient margin for the present width of the page of both post and large post octavo to be maintained, and the depth of each page to be half as much again as its width, thus insuring greater symmetry than now exists. The proposed alteration would be as follows: Post folio, $14\frac{1}{2} \times 19$; post quarto, $6\frac{3}{4} \times 9$; post octavo, $4\frac{1}{2} \times 6\frac{3}{4}$; Large post folio, $15\frac{1}{2} \times 21$; large post quarto, $7\frac{1}{2} \times 10$; large post octavo, $5 \times 7\frac{1}{2}$. If any committee nominated by the trade had the power to determine such changes, the odd sizes into which paper is now cut as post or large post, quarto or octavo, would be usefully merged in an authoritative standard of measurement benefiting equally the maker, the dealer and the consumer. That such a committee does not exist, is no proof that it might not be usefully called into existence and fulfill manifold trade requirements. We have Stationers' Hall, The Stationers' Company, The Stationers and Paper Manufacturers' Provident Society and the Stationers' Mutual Benefit Society. It would not be of the nature of a new discovery if the amalgamation of these forces, or some of them, should prove additionally useful in purging the trade of anomalies, and reducing some of its practices to principles. The junior society could no doubt furnish an able permanent secretary worthy of an office in Stationers' Hall and the Stationers' Company, and each Paper-makers and Stationers' Society might nominate four members whose position would carry sufficient weight to insure the resolutions of the committee being received and respected by the trade.—Richard Herring, in the *Stationery Trades Journal*.

Early specimens of printing are distinguished by the extraordinary size of the characters. The Mazarin Bible is an instance of this. Generally they were of the rude Gothic character, mixed with those produced by the hand, to imitate the hand writing of those times, and were, therefore, subject to the abbreviations used in manuscripts. Blanks were left for capitals at the beginning of the chapters, to be filled up by hand by the illuminators.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD
BERKSHIRE
MILLS.

LINEN LEDGER PAPER

Will stand the severest
test of COLOR, CLIMATE,

Being Triple Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBBE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884**. This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS** and **NEW YEAR CARDS** are now ready, and will be sent on application.

ENGLISH HAND-MADE PAPERS

ORIGINAL
EYNSFORD
MILLS,

WATER-MARK:
FELLOWS

KENT,
ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers. For Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor: **JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.**

THE GLOBE FILES CO., CINCINNATI,

Manufacture the most complete and popular line of **STATIONERS' FILE GOODS** made in America. Liberal Terms to Dealers.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 285,470. Apparatus for Stereotyping Matrix-Strips.—Merritt H. Dement and Austyn W. Granville, Chicago, Ill.

No. 285,475. Artificial Russian Leather.—Ella M. Freeley, New York, N. Y.

As an improved article of manufacture, artificial Russian leather made of the ordinary artificial leather or rubber cloth, of enamel cloth, or of leatherette steeped in a solution of bark of oak, bark of hemlock, bark of sumac, bark of willow, and water in the proportions and in the manner specified, and smeared with a solution of Russian jachter extract, alcohol, and ether in the proportions and in the manner specified.

No. 285,482. Ornamenting Paper and Cards.—Phillip Hake, Hoboken, N. J.

No. 285,495. Check Box.—David Lubin, Sacramento, Cal., assignor of one-half to Harris Weinstock, same place.

No. 285,517. Picture-Frame Hanger.—Charles F. Sleeper, Boston, assignor to Tate & Co., Malden, Mass.

No. 285,531. Index.—John H. Wagstaff, St. John, N. B., Can. Patented in Canada May 8, 1882, No. 14,750. Extended December 26, 1882, No. 16,023, and extended December 27, 1882, No. 16,024.

An index the pages of which are provided with exposed generic references, and with the letters of the alphabet arranged in horizontal rows which terminate a sufficient distance from the right-hand edges of the pages to leave margins of proper width to receive an ordinary name or title, said pages being also divided into vertical columns corresponding with the letters in said rows.

No. 285,556. Printer's Correcting-Table.—Louis L. Bender, Buffalo, N. Y., assignor of one-half to John C. Dingens, same place.

No. 285,578. Pen-Holder.—Robert S. Cutting, Providence, R. I., and Harvey A. Spencer, New York, N. Y.

As a new article of manufacture, a supplemental pen-tip having two independent pen-apertures arranged at oblique angles to each other.

No. 285,618. Memorandum Book.—Edwd. A. Hemphill, Elizabeth, N. J., assignor to the Kiggins & Tooker Company, New York, N. Y.

1. A memorandum-book having its covers stitched to each other a short distance from the back, forming a pencil-pocket along the back of the book. 2. The combination, with two book-covers stitched to each other a short distance from the back, thereby forming a pencil-pocket, of a book held between and secured to the covers in such a manner that the pencil-pocket will be along the back of the book.

No. 285,619. Method of Manufacturing Inlaid Articles.—Godfrey Hirst, Whitby, County of York, England. Patented in England, June 2, 1880, No. 2,253, and in France, October 5, 1880, No. 138,998.

REISSUES.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

Acme Stationery and Paper Co., N. Y.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

The Vans, printers, Philadelphia, Pa., have been sold out at auction.

The business of R. J. Molloy, printer, Sydney, N. S., has been closed.

W. E. Belknap, of the firm of J. R. Willard & Co., publishers, Erie, Pa., is dead.

The firm of R. Samuel & Co., dealers in toys and fancy goods, Merced, Cal., has dissolved.

A. C. Perry, dealer in books and stationery, Brandon, Man., has sold out to Frank Patterson.

Charles O. Stetson, dealer in picture-frames, Batavia, N. Y., was damaged by fire a few days ago.

J. M. Wilcox, printer, Nevada, Ohio, has sold out a half interest in his business to Frank Holmes.

The Anderson Twine Company, Findlay, Ohio, has sold out to the Champaign Twine and Bagging Company, of Champaign, Ill.

Hinman, Moody & Co., paper dealers, Beloit, Wis., are reported by telegraphic dispatches to have made an assignment. Mr. Cobb, of the firm, was the treasurer of the Rock River Paper Company, which suspended lately.

The "Publishers' Trade List Annual for 1883," F. Leyboldt, publisher, 31 Park row, New York, is a big volume as to size and contents. It embraces the latest catalogues of publishers, with a reprint of the *Publishers' Weekly*, record of books issued from July, 1882, to June, 1883, inclusive, with a complete index of authors, titles and subjects; also the American educational catalogue for 1883.

The *Inland Printer* is a new monthly publication hailing from Chicago. It is devoted to the printing trade, and aims to serve the interests of both employers and employees. The second number, which has just been issued, is printed on fine glazed paper and contains a number of articles, selected and by special contributors, of interest to those in the printing trade. The first page contains a life-like engraving of Albert Durer. An article, embodying a biographical sketch of Durer, is also published. The paper is well edited. Its publisher is the *Inland Printer Company*.

The Globe Files Company has greatly increased its stock at its branch agency in this city and is now fully prepared to meet all demands of the trade. This is speaking a great deal for the facilities of the New York house, inasmuch as the trade in the Globe files has become so great that a very large stock of goods must necessarily be carried to fill orders promptly. One of the latest productions of the company is the Globe No. 1 file-box, which is just ready for the trade. This box is very durable, convenient and neat in appearance. It is made of tar-board of extra thickness, and is absolutely dust-proof. The label-holder in front is of extra width. The box has no inner drawer, but instead, the front end-piece opens and shuts, and when closed it is firmly held in position by a triangular-shaped lid, which fits over it, without in the least destroying the symmetry of the box, but greatly facilitating accessibility to its contents. The box is made in various sizes and is reasonable in price.

Victor von Bulow, of 186 Atlantic avenue, Brooklyn, was a clerk for Kiggus, Tooker & Co., pocket-book manufacturers, of 125 William street. The firm suspected he was robbing them, and Detective Mahoney was detailed to watch him on his way from the store to his home. On Tuesday evening he called at a fancy goods store at 150 Atlantic avenue, and, opening a satchel, emptied fifteen pocket-books on the counter. He offered them for sale at a nominal price. The detective entered when the bargain was in progress, and before it was concluded he placed him under arrest. Von Bulow admitted that he had been robbing his employers for months, and told where he had sold over \$300 worth of pocket-books. He was held for examination. Three years ago he first came under the observation of the police. He was then employed in the Brooklyn Gold Watch Factory. Over two hundred missing watch cases were found concealed in his bedroom. Owing to his youth and the respectability of his family he was not prosecuted. He next obtained employment in the publishing house of Johnson & Co., Murray street. He was suspected of having opened the safe one day and stolen money and jewelry to the value of \$400. He acknowledged his guilt, but again escaped prosecution. He dresses in good style. He belonged to a club of Brooklyn young men, and was fond of playing poker.

A meeting of the New York creditors of the firm of Culver, Page, Hoyne & Co., of Chicago, was held at the rooms of the Stationers' Board of Trade, on Monday. The names of a large number of creditors were submitted, and a committee was appointed to prepare a complete schedule of claims held by Eastern creditors. Circulars will be sent to all of the claimants with a request for a full statement of claims. As soon as all parties are heard from, another meeting will be held and such action will be taken as may seem necessary. The committee appointed to take action in the matter is composed of Mr. Keuffel, of the firm of Keuffel & Esser; Mr. Young, of the New York Dyeing and Printing Establishment, and Mr. Von Auw, of the firm of Liebenroth, Von Auw & Co.

Janentsky & Weber, Philadelphia, are publishing, in monthly parts, "The Etcher's Folio," intended to present the finest specimens of the work of American etchers. Among the contributors are H. T. Carris, C. A. May, H. F. Richter, G. D. Clements, P. Moran, John Sartain, H. Faber, Th. Moran, B. Uhle, S. Ferris, E. L. Peirce, Robert R. Wireman, G. Ferris, J. Pennell, F. A. Hetherington and F. de B. Richards. Subscriptions may be taken by the trade.

A new publication called *The Lithographer* has just issued its initial number. It is a journal devoted to the graphic arts—especially to the art of lithography and allied sciences, and is edited by men well versed in the subjects which they purpose to discuss. *The Lithographer* is an eight-page paper, and is published weekly by the Lithographer Publication Company, Chicago, Ill.

A dissolution has taken place in the firm of Alder & Stuckwish, dealers in wall-paper, &c., Terre Haute, Ind. The style of the firm has been changed to Alder & Co.

The Milan Paper Company, Milan, Ill., is reported to have suspended. It is stated that its liabilities are about \$100,000 and the assets \$70,000.

D. L. Levy, publisher of the *Pacific Life*, San Francisco, Cal., has been attached.

George B. Herrick, printer, Batavia, N. Y., has been damaged by fire.

Adams & Goshorn, printers, Stuart, Ia., have dissolved partnership.

W. H. Bricker, newsdealer and stationer, Beaver Falls, Pa., has sold out to J. C. Gibney & Co.

An assignment has been made by Lewis E. King, printer, Waterbury, Conn.

Charles G. Blair has bought out the business of Frank D. Beebe, stationer, &c., Meriden, Conn.

Richter & Husche, manufacturers of picture-frames, Chicago, Ill., have dissolved partnership.

The Milan Paper Company, Milan, Ill., has been attached under judgments amounting to \$16,756.

Bennett & Co., paper dealers, Montreal, Can., have made an assignment. Their liabilities are \$45,000.

Steen & Boyce, publishers, &c., Winnipeg, Man., have dissolved. James E. Steen continues the business.

A dissolution has taken place in the firm of Davis & Co., dealers in stationery, &c., Shelby, Ia., John Davis succeeds to the business of the old firm.

The A. S. French Company has been established for manufacturing the Mackinnon stylographic pen, with its office at 199 Broadway, New York.

The firm of Bruck & Co., dealers in books, stationery, &c., St. Helena, Cal., has dissolved. David L. Haas has retired, and Edwin L. Bruck has been admitted.

The schedules in the assignment of Herman Heim, dealer and manufacturer of tags, &c., formerly at 309 Broadway, New York, to James F. McMahon, state liabilities \$1,007.98, nominal assets \$1,055, and actual assets \$999.

Tucker, Zeigler & Co. have opened a new book, stationery and fancy goods store at 301 Central avenue, Cincinnati, where they will keep a stock complete in every department. Fred. C. Zeigler, of this firm, was formerly with Alfred Warren.

A large addition has been made to the line of holiday papereries manufactured by the Powers Paper Company, bringing the number of boxes up to 562. A full line of samples can be seen at the New York office, J. L. St. John, agent, 62 and 64 Duane street.

Welch & Muse, stationers, &c., Albany, Ga., have dissolved partnership. A. W. Muse, retiring. L. I. Welch will continue the business in connection with H. K. Agar, lately of New York, the style of the new firm being Welch & Agar. Mr. Agar is a son of Alexander Agar, New York.

The National Publishing Company, Philadelphia, is receiving orders from every section of the United States and Canada for its elegant quarto bibles. One of the best recommendations of its line is that dealers who have given its bibles a trial find them so salable and attractive that further orders are assured.

The demand for the reversible document and sample envelopes manufactured by the Cincinnati Paper Novelty Company is said to be large. The envelope is made of the best quality of stock. The sample envelope is printed, if so ordered, with the dealer's name on one side and blank lines for writing the address of any dealer to whom samples are sent through the mails. On a dealer receiving samples and making his selections, all that he has to do is to inclose the same in the envelope, after it is reversed, when it is ready for mailing, there being a printed

address of the wholesale dealer on the reversed side.

S. G. Barr, publisher, Corinth, Miss., has moved to Aberdeen.

S. F. Baker, stationer, &c., Peters, Cal., has sold out to R. Mortimer.

Union Durant, formerly paper manufacturer, &c., Newbury, Vt., is dead.

James Debit has bought the printing business of Harry Swift, Brockville, Kan.

F. J. Prior, bookseller and stationer, Putnam, Conn., is reported to have left that town.

Smith & Rush, manufacturers of fringes, &c., New York city, have made an assignment.

H. O'Brien, of the firm of H. O'Brien & Co., booksellers and stationers, Cleveland, Ohio, is dead.

Lyons & Wright, booksellers and stationers, Kingston, N. M., have sold out to Lyons & Dawson.

A. A. Hutchins, manufacturer of brackets, &c., Clyde, Ohio, has made an assignment to M. B. Lemmon.

An attachment has been issued against the Consolidated Paper Company, Kansas City, Mo., to recover \$2,049.

Fulenwider, Brothers & Co., publishers, St. Louis, Mo., have dissolved partnership. Fulenwider Brothers succeed to the business.

The schedules of Heyman J. Flatow, dealer in fancy goods at No. 132 Canal street, New York, show liabilities, \$13,001; nominal assets, \$4,569, and actual assets, \$1,964.

The large wire "shipping tag sign" which projects over the street from the roof of Dennison Manufacturing Company's store, Philadelphia, was subject to a severe wrenching and partly demolished in the squall on Monday. For fear of causing loss of life, it had to be cut away and hauled in, and for a time it caused quite a commotion on Chestnut street.

Charles J. Cohen, Philadelphia, is having a very large sale for special sizes of envelopes suitable for inclosing Christmas cards. This firm has recently issued a new price-list—No. 50—which has diagrams of twenty different sizes. These are boxed in quarter-thousands of a size, and are also put up in assorted boxes of 500, each box containing one pack each of the twenty different sizes. This is very convenient for the dealer, as he finds at hand immediately an envelope to fit any card he may have in stock.

John B. Davids & Co. will soon put on the market a new brand of ink. It will be a jet black, and judging from samples shown by the firm it will be a superior article. The firm is receiving numerous orders for its green ink, which is growing very popular with the trade.

The firm of S. C. Moody & Co., wholesale dealers in paper, Kansas City, Mo., is said not to be affected by the assignment of Hiuman, Moody & Co., Beloit, Wis., S. C. Moody not having been connected with the latter firm since November, 1882.

A fire occurred on November 9 on the eighth floor of the ten-story brick building No. 49 Rose street, New York, occupied by Sackett, Wilhelm & Betz, lithographers, and caused \$1,000 damage.

Obpacher Brothers have a complete and varied line of Christmas and New Year cards. They are made up in the most elegant styles and should be examined by all in quest of these goods.

The paper and paper-stock warehouse of T. E. C. Wheeler, at Peoria, Ill., was burned on Saturday, November 10. Loss, \$17,000; insured.

S. G. Robinson, printer, Bangor, Me., is closing out his business.

S. T. Walker & Co., printers, Council Bluffs, Dak., have been succeeded by the *Herald* Printing Company.

A dissolution has taken place in the firm of Parker & Howe, blank-book manufacturers, &c., Walla Walla, W. T.

A novelty in pocket memorandum slates is covered with blue plush and contains a mirror and patent pencil holder.

Newell, Smith & Co., booksellers and stationers, Ogdensburg, N. Y., have been succeeded by Edgar A. Newell & Co.

The paper and paper-stock warehouse of T. E. C. Wheeler, at Peoria, Ill., was burned on Saturday night. Loss, \$17,000; insured.

The Booth and Osgood Manufacturing Company, of Chicago, manufacturer of school furniture, confessed judgment on Monday afternoon for \$35,000. The total liabilities are estimated at \$75,000, with assets sufficient to cover that amount. William S. Booth, the president of the company, who resides in Stamford, Conn., is the largest creditor.

LOCKING UP FORMS.

Great annoyance is often experienced in electrotyping from forms which have not been properly locked up. A proof taken from a form after the quoins have been pushed up with the fingers may show every line straight and everything in its proper place, when, after finishing the lock-up, the tightening of the quoins with the mallet and shooting stick or wrench will produce a displacement of lines and types alike provoking and unsafe. Forms for electrotyping should be locked up even more tightly than when sent to the press; for the adhesiveness of the wax mold is more likely to draw letters than the suction of rollers. The forms should be well planed down after the final locking up—care being taken that no dirt or other extraneous substance is under it—to insure its being perfectly flat. A proof of every form should be taken after the final lock-up, and this proof carefully examined to see that nothing has been dropped or displaced. A clean proof should be sent with the form to the foundry, so that the electrotypist may have an opportunity to examine it, and to repair any damage that may possibly happen to the form while in his hands. Before locking up a form, type-high bearers at least a pica in width should be placed around it, and between (and close to) the several pages, if there are more than one. Open spaces, as about the headings, blank pages, &c., should also have bearers made by setting types in the blank spaces. These bearers serve the double purpose of guards for the matter in the forms and enable the workman to have something to rest the plates upon when finishing them.—*Electrotype Journal.*

Restrictions to trade are sometimes talked of; but, I am glad to say that the only real restrictions in business seem to be those imposed by merchants themselves. It is quite patent that the commercial community has put on its thinking cap and that it is not disposed to extend credit as freely as heretofore, nor to demand it. Of course the improvident, reckless and doubtful class of buyers is still in existence, but it doesn't get much of a show. This may be specially said of the stationery trade, and the careful disposition of buyers and sellers is noteworthy and commendable.

The exact date at which printing was introduced into Wales has not been ascertained, but the name of John Shearwell, who printed books in the Principality in 1587, is on record. The earliest preserved specimens of the art in Scotland is a breviary published at Edinburgh in 1510.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 15, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

WITH the coming session of Congress there are likely to be many acts of national legislation projected which will affect more or less intimately the rights and privileges of the mercantile community. THE STATIONER has frequently urged upon its readers that business men should impress their views upon all matters of legislation through their representative bodies, or, failing that, by methods of union which will declare the sentiments of trade separated from political schemes or influences. As we have said, among the probable demands upon Congress there are several which affect the entire body of commercial men, manufacturers and merchants alike. Are these matters to be disposed of with indifference on the part of those most interested? We hope not. We address ourselves to the stationery and paper trades, with which our duty chiefly lies, and ask that due and seasonable attention shall be given to subjects which concern them as well as others, and that they shall take such action as may be necessary to shape policies, which will be influential on commerce. Such duty should not be deferred until the critical moment. Anticipation of what ought to be done and preparation for urging and expediting needed legislation should be had *now*. Waiting until Congress meets or until plans are presented which may or may not have obnoxious features, is not prudent, but is great want of wisdom. Take "a long look ahead" is a good commercial axiom, which we particularly desire to impress upon our readers.

COMMERCE is a great civilizer and cements friendship. It may thus be called the controlling influence of the world. An interchange of corn and calico with ivory and pearl brings barbarism and civilization into contact, and establishes more amicable relations than shiploads of missionaries and tons of sermons. The last four years of railway building, mine opening, and general development of Mexican resources by a few American capitalists and engineers, coupled with a commercial interchange of products and sentiment, brought the two republics into harmony, notwithstanding the years of border ugliness and international irritability, during which differences were so carefully cultivated on both sides by those whose interest lay in keeping the two peoples divided. It only needs one more movement to cement Mexico and the United States so firmly in the bonds of amity that neither foreign interests nor native jealousies shall have power to divide them, and that is the social intercommunication of both countries. This happy consummation has been inaugurated and will soon be more extended with the march of commerce and the lines of railways. Recently, Americans have visited Mexico and have formed social alliances and friendships which will be potential in this development of good feeling, and the daily journals of this date record the advent of a party of prominent Mexicans who come

to visit us and to inform themselves of whom and what the American people is constituted and to pave the way for those friendly interchanges of social and commercial life which are so potential in their influences. Not long ago, too, we had other distinguished Mexicans who visited us, and it is evident that only the friendliest feeling can or ought to prevail on both sides without any ulterior purpose of offense or prejudice to the interests of either. A cheerful greeting should be extended to those who visit us from Mexico, and distinction should be made in the manner of their reception as much as in the instance of any other foreigners who may have visited us. There is also pending a plan for commercial intercourse with Mexico, which should be speedily put into operation, that so, with broadened business and social ties, we may mutually develop the arts of peace and feelings of friendship which ought and, we hope, must become enlarged and strengthened.

ROUNDBABOUTS.

BY THE TRADE LOUNGER.

I shall have a few words to say about our foreign trade. This may be, perhaps, a subject on which the trade may think that they have heard enough, but it is one of those things on which, after all, too much cannot be said, if it shall only prove an incitement to "go in and win."

* * * *

I happen to know of some people who are cute enough to make the effort and are quietly working out their plans for getting their goods into every corner of the foreign markets. To be sure, they have "taking goods," but these are not expensive, and are just in the line of "Yankee notions," or little devices in the stationery way that please people, are readily understood, quickly picked up and, when picked up, held on to.

* * * *

Why, when there are so many things—in fact, almost everything in the American stationery line—that can be as easily sold abroad as here, don't the American trade plan and try to secure the market which awaits them. People talk about "limited demand," "dull trade" and in a generally stereotyped way about the domestic trade, forgetting that, while they may be producing in excess of the requirements of home consumption, they are really selling more goods than they ever did. If they want to sell more, they must go outside and do it.

* * * *

I observe that THE STATIONER has been assiduous in suggesting various means and places for developing an export trade, and to supplement its efforts I will quote from a letter written from Salonica, Turkey, which I think points out one of the directions in which persistent, systematic effort may be made available.

* * * *

My correspondent says: "I have been making inquiries as to paper, stationery, &c., and find that there is but one importer who has the monopoly of the trade. The paper is of French manufacture and of inferior quality. There seems to be a good opening here for American manufacturers." Now you have got it from a man who is on the spot, and I assure you

he is good authority and in a position which renders him competent to speak.

Great preparations are being made for Evacuation Day. What are the stationery trade going to do about it? Of course they will shut up. Can't they make a parade, headed by the Board of Trade, with its president to the fore? Lest style might be wanting, I suggest carriages. No band will be needed—there are blowers enough in the trade.

Age hath not cooled its ardor! I like to see veterans preserve their youth. Of course, our friends have all taken cognizance of the fact that that veteran of the trade, A. S. Barnes, has taken a wife. With good wishes to him and his bride—"May they live long and prosper."

The numerous creditors of the Chicago firm which sold out the other day seem to prove that much confidence was reposed in the house, and yet I find that there are some, even among those most interested, who declare that they thought that the house was involved and expected that it would succumb. Verily, this is a kind of prescience most "previous."

I ran against a funny conjunction in business. I said conjunction; shall I say assimilation? A man in California sold out his business. He kept a saloon and stationery store. When you come to study it, this man displayed a genius for combinations. He could sell note-paper and envelopes for customers who could thus send home word that they would be out late. For losses in a friendly game he could supply blank notes, checks, &c. He could furnish cards—"cold decks," or otherwise—chips and the like. It will be seen what a wide range the stationery business might have in connection with the saloon. Some people could argue from this that there ought not to be any stationery business, because it is capable of encouraging and sustaining a "gin-mill."

Dull trade, some people say. No wonder! They don't advertise. Why, I ran across a man this week who said that, within a few days after the issue of the Holiday Number of THE STATIONER, he had heard from all parts of the country in reference to a little thing that he had noticed in that issue. I think that trade is better than many are disposed to believe it. Study over this, ye grumblers.

ADVERTISING CARDS.

ASTORIA, N. Y., November 15, 1883.

To the Editor of The Stationer:

SIR—In reference to the article, "Advertising Designs," on page 686 of your last issue, allow me to place in your possession a few facts relating to the origin and early development of "Floral Cards."

To the best of my knowledge and belief, floral cards—chromo-lithographic cards—and designs for advertising purposes were *entirely my own invention*, and were produced and used by me while in business as "Printer and Lithographer," more than twenty-five years ago, in London, England.

In the years 1858, '59 and '60 many copies of these cards were sent over into this country and other parts of the world, and there are still persons living who can testify to this fact.

As you know, I have in my possession certain cards that I state are some of the

earliest productions—cards produced in the years mentioned—and I am prepared to prove these statements and others on kindred matters as circumstances arise to warrant my troubling the trade and the public with my personal affairs.

P. GRANT.

ANSWERS TO CORRESPONDENTS.

F. H. D. & Co. want to know where Day's leads for rubber propelling pencils can be had.

Ans.—Henry Bainbridge & Co., New York.

P. N. M. Co. wants to know: 1. Where to get a late catalogue of Perry & Co., London. 2. Names of good English houses dealing in stationery specialties.

Ans.—1. Ivison, Blakeman, Taylor & Co., New York can probably supply you. 2. Thos. De la Rue & Co., London; Letts & Co., Limited, London; John Walker & Co., 96 Farringdon street, E. C., London; William Collins, Sons & Co., Limited, 139 Stirling road, Glasgow; Eyre & Spottiswoode, Great New street, London—will probably meet any or all of your requirements.

The Acme Stationery Company in order to meet the demands of its increasing trade, has greatly added to its manufacturing facilities. In writing-pads alone the company is now man-

ufacturing the enormous quantity of 25,000 a day. The company recently received one order for 300,000 tablets. At the rate of sixty-two sheets of paper to a tablet, it required to fill this order 18,600,000 sheets, which, if placed on top of each other, would be nearly a mile and a quarter high, and if each sheet had been placed end to end they would reach from New York to Omaha. To fill this order requires an immense amount of manufacturing capacity, as the reader will see, yet, with the company's greatly improved machinery, it manages to fill all orders with ease. The writing-pad has of late years come into almost general use. Lawyers, bankers, merchants, newspaper men and private persons find it very useful. It is quite as cheap as the ordinary form of stationery and much more convenient.

The following-named gentlemen were among the out-of-town tradesmen who visited the city during the past week: Mr. Basinzky, of Julius Basinzky & Co., Miles City, Mon.; Mr. Morris, Helena, Mon.; Mr. Stoke, of Stoke & Connell, Reynoldsville, Pa.; S. A. Maxwell, of S. A. Maxwell & Co., Chicago, Ill.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, November 14, 1883, }

THE MONEY MARKET.—The local money market remains in an unchanged condition as regards surplus funds and rates for the use of the same. Best mercantile paper ranges from 5 to 6 per cent. discount, and from that up to 15 per cent., according to the estimation of the standing of the makers; call loans on collateral, 2@4 per cent. per annum, while savings banks and trust companies are charging 4½ per cent. for accommodation upon prime security, which can be turned into cash at almost a moment's notice. The stock market continues dull and devoid of features of much interest, with prices, as a rule, steady. The better class of railway mortgages are firm and in fair demand. Government bonds are strong and in good demand, especially the long date issues. Sterling Exchange is a fraction lower and dull, while Continental bills are unchanged.

THE PAPER MARKET.—The business reported by dealers this week shows no improvement in the demand as a general thing, but in instances some houses have experienced a little better trade since the interruption and excitement of the elections has passed off. The fall season is drawing to a close, and a gradual shrinkage of trade from now to the end of the year is to be expected. Many purchasers cling tenaciously to the cautious policy of buying only such quantities as they are actually in need of, and can only be induced to buy much ahead of their requirements by concessions in prices for prompt cash. Although several of the large manufacturers of manilla advanced their prices ½c. on all new orders, most dealers can still buy at the old prices of those manufacturers who are not so fortunate as to have plenty of contracts ahead. We hear of some mills engaged on orders ahead for two or three months to come. Prices have undergone no change during the week, but rule about the same as for several weeks past.

THE STATIONERY MARKET.—Trade is quite dull this week, the contrast which it presents, in comparison with its brisk character a few weeks ago, being very noticeable. Orders come in indiscriminately, and are generally small. Dealers are calling for just sufficient goods to carry them along, and are buying very cautiously. The envelope trade is a little better, business having picked up quite a good deal during the past few days. The trade in plush goods is noticeably depressed. The market is amply supplied with these goods. Business in fine stationery is about the same as it has been. The toy trade is quite fair. The ink trade is necessarily over for the season, and shipments have nearly ceased.

EVERY BOOKSELLER

PASTE FOR DECALCOMANIE.

Any one can make good paste if he only takes sufficient trouble. The tendency in the compound to turn sour can be obviated by using a few drops of carbolic acid, which should be added while the paste is being boiled. The peculiar odor of the acid may be removed by the addition of a little cloves or other perfume.

Take a quarter of a pound of good gum arabic and dissolve it in four quarts of water. Some little time is required for this; carefully strain off the sediment. Stir into this gum-water two pounds of best wheaten flour until the whole becomes of a creamy consistency, without any lumps whatever. In another vessel mix three ounces sugar of lead and alum, dissolved in a little water. Add this to the previous mixture and stir the whole up thoroughly. Then put it on the fire, and keep it there until it shows signs of boiling; but by no means allow it to boil over. Remove from the fire, and while hot add a dozen drops of carbolic acid. This will make a splendid paste.

Another recipe is the following: Dissolve two ounces of alum and one pound of gum arabic in two quarts of boiling water. Make the paste in the ordinary way, gradually putting the flour into the water, then stirring until it has a regular consistency, without lumps; finally boiling it, but not letting it boil over. When cold, add as much water as will bring the paste to consistency of cream. Then sprinkle into it two teaspoonfuls of powdered resin and half a dozen ground cloves. Boil for a few minutes. This paste will keep for twelve months without becoming sour or fermenting. The paper should be coated twice with this paste.

The greatest care must be taken in mixing the flour and water. It must always be done when the water is cold, before putting the pan on the fire. The more the paste is boiled the less liable it is to ferment.

MACHINE FOR FOLDING CIRCULARS.

A new machine especially adapted for folding circulars, price lists, &c., which are used by the business men in this country for advertising purposes, has been invented. The large number of circulars sent out by some firms makes it necessary to have one person constantly employed to fold them. This invention greatly reduces such labor, and performs the work in a much neater manner. This machine is adjustable so as to fold any of the ordinary sizes of circulars in any manner desired. It can be run by hand, foot or steam-power, its capacity depending upon the adroitness of the attendant. Ordinarily, from 1,000 to 1,500 circulars may be folded in an hour.

The size of the machine is about 14"x14", and it stands 8" high, and weighs about 15 pounds. It is so simply constructed that any one can operate it, and there are no parts liable to get out of order or break. The whole machine presents a handsome appearance, and its usefulness is apparent to any who have seen the result of its work. To any one desirous of going into the business of manufacturing small machinery, the inventor offers favorable inducements.

Since September 1, the Post Office Department has furnished to postmasters 290,926,164 postage stamps, 86,359,600 stamped envelopes, and 74,285,250 postal cards, or a total of 452,271,014 pieces, of an aggregate value of \$8,520,540. This enormous issue was made upon 114,051 requisitions from postmasters.

OBITUARY.

RICHARD B. WISE.

Richard B. Wise, of Philadelphia, died on Thursday, November 8, of consumption. Mr. Wise had been connected with the house of William Mann for a great many years, having charge of the copying book department of its business. He had many friends, and is spoken of as a good and true man. He was buried on Monday from the residence of his mother-in-law, Mrs. Wm. Mann, 1,722 North Eighteenth street, Philadelphia.

Gracie A. Kimball, the only daughter of Charles A. Kimball, manager of the Philadelphia house of the firm of L. Prang & Co., died at the residence of her father on November 9, aged 18 years. She returned from school last summer for vacation, and was taken sick with consumption. Miss Kimball was a very promising young lady, and her death is mourned by very many friends.

J. E. Linde has a most varied and complete line of chromo cards, folders and shape novelties, which he is offering to the trade this season. In cards he is offering some forty-six numbers, embracing numerous floral, landscape and other scenes designed by the best artists and executed in rich and delicate colors. Mr. Linde has also nearly a hundred different designs in shape novelties, many of which have become very popular with the trade, as the "Hen and Chickens," "Santa Claus," "Coasting," "Jack in a Box," and the "Shepherd," which are among the leading styles. These goods are made of the best material and are brilliantly and attractively colored. A special feature of Mr. Linde's shape novelties is that the colors are brought out by a coat of varnish, giving greater brightness and a more finished appearance.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

SPRINGFIELD, MASS.

MARK TWAIN ON COPYRIGHT LAW.

The editor of the *Boston Musical Record* a few weeks ago wrote Samuel L. Clemens for his opinion on an international copyright law, and this was the reply: "I am forty-seven years old, and therefore shall not live long enough to see international copyright established; neither will my children live long enough; yet, for the sake of my (possible) remote descendants, I feel a languid interest in the subject. Yes—to answer your question squarely—I am in favor of an international copyright law. So was my great-grandfather—it was in 1847 that he made his struggle in his great work—and it is my hope and prayer that as long as my stock shall last the transmitted voice of that old man will still go ringing down the centuries, stirring the international heart in the interest of the eternal cause for which he struggled and died. I favor the treaty which was proposed four or five years ago and is still being considered by our state department. I also favor engraving it on brass. It is on paper now. There is no lasting quality about paper."

Henry Bainbridge, who has been confined to his residence for some time on account of illness, has not yet fully recovered. His health is very much enfeebled, but his condition is not considered dangerous.

Charles J. Cohen, Philadelphia, shows this week a very complete assortment of staple and fancy inkstands. In the former grade are comprised twenty patterns in solid walnut bases, as also walnut and ebony veneered, all of these being fitted with richly cut-glass inkstands, and either a sponge cup or red ink bottle in the centre; these are of Mr. Cohen's own designing, and are offered to the trade at reasonable figures. In the fancy line are eighty cut-glass inkstands in white, old gold, topaz and mazarin blue shades, and fifty varieties in Vienna *repoussé* and Etruscan steel.

Hard & Parsons are offering a very creditable line of plush goods this season. Their plush-framed mirrors, ornamented with wreaths of flowers worked in the plush by hand, are very pretty. The firm has also a large line of broom holders, plaques, banners, jewelry boxes, &c., finished in plush of various colors. The "Lover's Album" is something entirely new, and is the production of this firm exclusively. It is a beautiful album with plush covers, lined with crimson satin. There are places for two photographs, hence its name. This article is taking well with the trade, as it deserves to be. There is also a line of papeterie boxes, finished in plush and swan's down, that is really unique. A very elegant style has a writing tablet with pen and paper cutter holders. The tablet fits in the lid, and when not in use it forms an elegant lining of puffed satin for the same. Hard & Parsons have also a great variety of Easter cards and boxes in the most popular designs. A design in Christmas cards is of ecclesiastical design, and contains a large number of emblematical figures, the whole combined forming a harmonious and beautiful picture. This card has a key giving the interpretation of the various emblems. Several other novel and attractive Xmas cards, which are original with Hard & Parsons, will claim more than ordinary share of attention and will be in demand. The line of Easter cards with easel backs and artificial flower decorations, Easter boxes, plush bannerettes, &c., is very attractive.

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.
One-half the time and three-quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe: and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

DUPLEX WRITING-TABLE.

This is an improved apparatus for writing, whereby two manuscripts are produced at one and the same time; and it consists in mechanism for holding and controlling two sheets of paper on different planes, so that each sheet may be presented to the pen and an exact duplicate copy be produced.

It consists of a writing board, near one end of which is mounted a roller in suitable journals. This roller carries the upper sheet of paper. In front of the roller is a series of four rolls, one resting upon the other, and the top and bottom rolls being connected by an endless band. Of these rolls the three upper control and feed the upper sheet, which passes between them and around the upper or auxiliary table, while the two lower rolls control and feed the lower sheet, which lies on and traverses the main table. Keyed to one end of the top roll is a crank. In front of and on a level with the lower circumference of the top roll is a writing-table or board, raised above the board.

The penholder consists of a tube for holding the pen and penholder, a clasping-arm, extending at an obtuse angle from the tube for securing the second pen, and a clamping-screw, by means of which screw the pens may be secured in or released from the holder and may be adjusted as desired. The second pen should be placed so as to write on a plane above the plane written on by the first pen.

The operation is as follows: A roll of paper is placed on the roll which carries the upper sheet of paper. The free end of the paper is passed between two of the series of four rolls, being the central pair, over the front edge of the writing-table, and then between the rolls in the opposite direction. The end of another sheet of paper resting on the table is placed between the second two rolls of the series of four. By the use of the first penholder, the pens having been first adjusted to suit the difference in the planes of the auxiliary and main table, both sheets of paper may be written on by one and the same movement of the hand, the first pen writing on the sheet of paper on the main table, and the second pen writing on the paper on the upper table. When a line has been written, by turning the crank the several sheets of paper are caused to move between the rolls and over the tables uniform distances, and another line is written on both sheets of paper.

Although, as described, the penholder is adapted to write on different planes at the same time, yet, by lengthening or lowering the forward pen, the holder is adapted to make a duplicate of the manuscript, both sheets of paper being on one and the same plane.

NEW USE FOR SCRAP LEATHER.

Cummings & Shank, Gloversville, N. Y., are the inventors of a process for converting leather scraps into paper or pasteboard. In the manufacture of paper or pasteboard from scraps or waste leather, the same is subjected to a bath of water, chloride of lime and carbolic acid, and to successive drenches of lime-water, with potash, concentrated potash with water, and rinsing water, and the mass is ground into a pulp, either for use separately or to combine with straw or other vegetable matter, as desired.

The Chinese chronicles state that their mode of block-printing was invented 50 B. C., but that paper was not manufactured by them till 95 A. D., so that printing was in use forty-five years before the invention of paper. Previous to that time they used silk.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot,
Each sheet is water-marked with name and date.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 21. NEW YORK, NOVEMBER 22, 1883. WHOLE NO. 439.

Correspondence.

CINCINNATI CLIPPINGS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, November 19, 1883.

It is characteristic of Cincinnati business men to be conservative. Here and there a reckless gambler shines for a time in apparent prosperity, but when his light goes out the darkness covers up all remembrance of his "brilliant" career. The record of Cincinnati's successful men points unmistakably to the fact that steady, close, careful, conservative habits in business lead to prosperity. It is not flattery to say that these characteristics pertain strongly to the men here who are the readers and patrons of THE AMERICAN STATIONER. Our paper manufacturers have all weathered storms that have been too severe for their brethren in other localities. They are on firm footing, ready to take advantage of any change for the better, and prepared to meet any adverse wind. This condition may not be the result of what is known as a dashing style of business, but it is the fruit of a style that pays well, no matter what it may be called.

The paper houses here are in excellent shape. Their warerooms have grown almost, if not quite, to double their capacity six years ago, and stocks are more conveniently stored and in better position for inspection by customers. Manufacturers report mills in full operation, with a fair amount of orders. There is a disposition to lower the price of manilla paper, but all else remains firm.

In stationery business there is a fair trade, with a looking-up for the future, as the card season and other holiday features begin now to attract attention. Thanksgiving cards are seen in appropriate designs in some of the windows, and they will undoubtedly have a fair run of patronage. We are becoming a nation of givers. It is a most graceful ornament to the national character. The proof of it is found in the promptness with which relief comes to any case of general distress. When Cincinnati was flooded last spring, the good people of the whole country poured in contributions until we were forced to enjoin further gifts, or rather to announce that money sent here would be distributed to more needy localities. It is not precisely the same feeling that prompts these little social gifts, but it is a near and a good neighbor, and its multiplication is to be desired. The old truth, "it is more blessed to give than to receive," remains true, yet the receivers do not complain of their diminished share of the blessing.

There are few novelties in the windows aside

from Thanksgiving cards, but stocks are brightening up in a most remarkable way, preparatory to the holiday sales. There is no better place than a stationery store to find things for every taste, and generally what one finds there is of a character that commends them because they are useful. Hence, more and more Santa Claus brings trade to the stationer.

Traveling men are not abundant this week, but those who have been here speak hopefully of the general condition of trade.

PRINCE WILLIAM.

BOSTON BITS.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE LOCKWOOD PRESS,
49 Federal St., Boston, November 20, 1883. }

The past week has developed no material change in trade, and business seems to be moving along to the satisfaction of most dealers. Jobbers report that there is fully as much doing, if not more, than at this season last year. Not that very heavy orders are being filled, but that a large number of country dealers are requiring more stock to run the year out. City retailers are very busy, and have no fault to find with the present outlook. With the approach of the holidays, business, of course, is usually good, but the present activity is due more to a liberal use of stationers' supplies among the people for weeks past. The Christmas trade has hardly set in yet with stationery, or with fancy wares and novelties. That is, the people are not yet buying. Jobbers, of course, are about over with the heavy part of their trade, though some little business will still be done by them for the next two or three weeks. In cards trade is very active with jobbers, and I expect to hear this year's sales placed far ahead of any previous record.

James R. Osgood & Co. are presenting a very extensive collection of their beautiful heliotype engravings. Among these are reproductions of the best works of such eminent artists as Angelo, Titian, Raphael, Bastien-Le Page and others. These engravings are artistically executed and finely finished, and are worthy a place upon the walls of any drawing-room or library. The low prices asked for these heliotypes place them in the reach of all who would beautify their homes. As types of art these engravings may be closely studied.

"Those Dreadful Mouse Boys," just issued by Charles H. Whiting, is now ready for the trade. The mechanical appearance of the book is excellent, its binding showing good workmanship, while the designing of the cover is artistically done. The story is one that cannot fail to inter-

est juvenile readers, and is well worthy a place among the best of holiday books. I read the story through, not skipping a line, because the style is fresh and because it was interesting; and then I wanted to learn how "Those Dreadful Mouse Boys" turned out. There is a bit of humor, which crops out occasionally, that seems to have been thrown in parenthetically, and it amuses. The writer of the story is clouded in "mystery," though I think that "Mytery" is a lady, notwithstanding ladies are afraid of a mouse. The work is well illustrated, and the story carries a moral with it that will prove beneficial to little folks. The demand for this holiday book will be large if properly presented, for parents would be delighted to place it in the hands of their children.

Forbes Company, proprietor of the great lithographic establishment of Boston, is meeting with gratifying success with its great collections of imported holiday cards. The artistic productions of Raphael Tuck & Sons are too well known to the trade to need much mention; for, owing to their real merits and to the enterprise of the Forbes Company, which handles these goods, they have found their way to the counter of every card dealer in the country. A series of "fire-place ornaments" presented by this house are something a little above the ordinary article; they are truly artistically beautiful. Their large sale is a good indication of the growing appreciation of art in this country. Another line of goods—real Watcombe terracotta plaques—are becoming quite popular. These plaques are beautiful, no imitation about them; they are genuine, and are meeting with great success among people of taste.

Dropping into a printing office the other day, my attention was called to an odd-looking little machine that stood in a corner, which, upon inquiry, I found was driving a line of shafting, furnishing power to three presses. This little machine bore the name of the "Amherst Hydraulic Motor," and it is certainly an ingenious piece of mechanism. At first glance it appeared to be nothing but a three-foot fly-wheel mounted upon a pedestal, but upon closer examination something more was revealed, which mechanism I will not attempt to explain; only remarking that the motor is driven entirely by water, transmitting a strong and uniform motion without jar or noise. No engineer or fireman is needed, and when no power is wanted the supply of water is stopped and the expense of running the machine ceases. This little engine, or rather motor, can be applied to a wide range of uses, and is finding its way, I am informed, into a number of printing offices in this city. It is made in various sizes ranging from

a half horse-power up. The Purchase Street Machine Company, which is handling this motor, reports that the products of the shop for the next three months are sold ahead, so favorably are they received.

Chase's liquid glue still holds its grip with the trade, and from the increased facilities lately introduced for its manufacture Mr. Chase thinks it will "stick." The same quality of excellence that this glue first possessed when placed on the market some eight years ago is still maintained, and this undoubtedly accounts for its increasing demand. Shipments are now made to all parts of the world. Possibly there is not a stationer in the country but has Chase's liquid glue in stock, for its value as a household article is well known, and it is frequently called for.

A. L. D.

PITTSBURG BREVITIES.

[CORRESPONDENCE OF THE STATIONER.]

PITTSBURG, November 20, 1883.

The fall trade has been very good in this part of Pennsylvania, and everything seems to denote that the holiday business will be satisfactory.

J. B. Weldin & Co. have this year a very full line of fancy goods, which exceeds as to quality and quantity any of preceding years.

W. W. Edgar makes a specialty of selling at retail the very latest novelties, of which he has an exceptionally fine assortment.

George W. Backofen, the only large dealer in artists' materials, has all of the best lines of Janentsky & Weber, of Philadelphia.

W. G. Johnston & Co., printers and stationers, report also a very satisfactory trade. Their business is more particularly with the large insurance companies, banks, railway companies, &c., which have kept Johnston & Co. very busy since the season opened.

Jos. Eichbaum & Co. have the largest printing, stationery and blank-book establishment in Pittsburg. Their firm is an old one, and can trace back its succession for three-quarters of a century to Cramer, Speer & Eichbaum, who were established prior to 1810, succeeding Cramer & Speer, the firm-name afterward changing to Eichbaum & Johnston, Johnston & Stockton, William S. Haven, and finally to the present firm. It can be seen that Jos. Eichbaum & Co. have a true title of nobility, and as *noblesse oblige* it can be said that with their organization and management they are not equaled by any other house in Western Pennsylvania. With the most approved and modern labor-saving machinery and the best workmen, they have an established high reputation as printers and binders. L. S. Reed Johnston, a member of the firm, who has charge of the department, is an artist in his line. They excel in fancy printing, for which they have become well known, and their designs are ornamental. They also make their own colored inks, by means of which they produce the happiest effects. A peculiar and at once attractive novelty in the way of ornamental printing was first made public in Pittsburg by Reed Johnston. Not knowing what else to call it he gave it the name of "Owltype." The secret of the *modus operandi* of production has always remained with Mr. Johnston, who can produce an infinite variety of effects and colors by his process. Without wishing to injure the city of Pittsburg, I can but regret that Mr. Johnston has not established himself at New York, where he would find a wider field for his inventive genius, and where he certainly would find lively and ready appreciation. This house

has also a large and well selected stock of fancy goods.

J. VIENNOT.

A NEW DEVICE FOR PLAYING-CARDS.

A new device has been adopted for playing-cards in which marginal emblems or figures are used to indicate the characters and values of the cards, and it is intended to enable the player to determine more readily and with less liability of mistake than heretofore, the character of each card without exposing the face.

Heretofore it has been common to place upon the margin of each card of a pack a miniature spot or emblem indicating by its form and color the suit to which the card belongs, and also a numeral or letter indicating the value of the card, initial letters being employed for court-cards and figures for the others. It thus becomes necessary to examine two devices to ascertain the character of the card, and as such devices are necessarily of small size the player is sometimes confused, and is led to make mistakes in confounding the figure with the emblem. This is partly remedied by the use of miniature representations of the entire card at the corners, and such cards have proved to be of great utility, especially for some games, as euchre, but they are not so serviceable for playing poker, where it is desirable to avoid spreading the hand and to cover the cards to as great an extent as possible. To avoid these objections each card is provided with miniature representations in diagonally-opposite corners, and in addition there is upon the margin, at each corner, a single letter or numeral, which indicates by its form the value or quality of the card, and is colored to indicate the color of the emblems upon the card. This single device, therefore, serves to show to the player whether the card belongs to a red or black suit, and also the number of its emblems or its character as a court-card. This is sufficient for poker playing, in which the color and values of the cards only are generally of importance. It will be seen that as there is but one device at each corner there is little opportunity for mistake, as the player is able at a glance to ascertain the character of the card and cannot be misled by confusing the indicators.

In some instances in poker, and also where the cards are to be used for playing different games, it is necessary to provide means for indicating the suits, but without the use of a second device likely to be mistaken for that above described. For this purpose there is put upon each card a line, arranged parallel to the edge so far inside of the device described that ordinarily the line may be covered in poker playing, but can be readily exposed, when necessary, by displaying a wider margin of the card. This line may be continuous to indicate diamonds, broken at two places to indicate spades, at one place to indicate hearts, and at three points to indicate clubs. In connection with the emblem or letter this will not only fully disclose the character of the card, but will further serve as a means whereby two persons, one familiar only with the English cards and the other with only the Spanish, can play together. The lines may be colored and divided differently. For instance, a break in one red line will indicate diamonds; a continuous line, hearts; a continuous black line, clubs, and a broken black line, spades. The lines may be placed outside of the margin of the card or they may form part of the margin lines of the miniature representations. In such case it is well to place the representations a little outside of the main margin line, thereby giving prominence to the lines. By this combination of the single in-

dicating devices, lines and miniature representations, a card is adapted for playing various games, with marginal indications of such a character as will enable the face to be almost wholly concealed, and yet indicating readily, and in a manner not to be misunderstood, the character of the card.

GRANOLITHOGRAPHIC PRINTING STONES.

P. Stuart, of Stuart & Co., Edinburgh, has, says the *Scotsman*, just patented an invention which seems of some interest to the lithographic printing trade. The stones used in such printing are, of course, liable to wear, and when reduced below a certain thickness can no longer be depended upon to sustain the pressure to which they must necessarily be subjected. Mr. Stuart proposes to strengthen stones which have thus been weakened by applying to them a backing of granolithic. This material, it appears, when placed in contact with a roughened surface, adheres with such tenacity as to form with the stone it is attached to one solid mass. Its capacity for sustaining pressure is known to be great, and, if additional strength should be required, bars of steel can easily be introduced while the material is in a soft condition. Treated in this way, a lithographic stone of an inch in thickness becomes thoroughly serviceable, and will, it is said, continue so till worn almost to a film. Blocks of the ordinary thickness thus become capable of furnishing the material for two or three printing stones, while slabs that would otherwise be too thin for use can be turned to profitable account.—*Stationery Trade Review*.

POSTAL STATISTICS.

The statistics of the Universal Postal Union for 1881 show that the United States ranks first in number of post-offices, with 44,512; Great Britain takes second place, with 14,918. Germany has 11,083, and France 6,158. Japan, with 5,094 offices, is far in advance of Russia, British India, Austria, Italy and Spain. Switzerland has one post-office to every 985 inhabitants, and the United States one to every 1,126. The United States conveyed the most postal cards, Germany next, and Great Britain and Austria in order. In respect to the number of letters and postal cards to each inhabitant the countries ranked as follows: Great Britain, 38.7; the United States, 27.3; Switzerland, 19.9, and Germany, 15.8. The United States had 91,571 miles of railroad; Germany, 20,573; France, 16,822, and Russia, 14,439 miles. In number of newspapers conveyed in domestic mails the United States ranks first, with 852,180,792; Germany second, with 439,089,900; France third, with 320,188,636, and Great Britain fourth, with 140,789,100. In gross postal revenue Germany has 205,324,215 francs; the United States, 194,630,444 francs; Great Britain, 175,690,000 francs, and France, 152,968,569 francs. Great Britain, Germany and France had a net revenue in 1881 ranging from 68,525,100 francs to 19,900,440 francs, but the United States, Russia and Japan had a deficiency in revenue in the same year ranging from 14,418,075 to 1,320,846 francs.

John Day, who distinguished himself between 1546 and 1584, by the variety and importance of his publications, had for his motto "Arise, for it is day." This was in witty reference to his own name. But to him it had a deeper and more serious significance. It pointed to that night of ignorance which was enlightened and dispersed by printing and the progress of the Reformation.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

Being Triple Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SEASON 1883-1884.

SEASON 1883-1884.

L. PRANG & CO.'S

Christmas and New Year Cards.

WE beg to express our thanks to our patrons and friends for the kind and flattering appreciation of our past efforts, and feel a pardonable pride at the very emphatic endorsement which our Cards have received from the American, English, German and Australian press. With one accord these exponents of public taste have given our Cards the first rank over all similar productions in the market. We are bound to maintain this superiority; and we have, as heretofore, spared no expense to create, with the aid of our enlarged experience, a Series of Novelties for the Christmas Season, which, we have no doubt, will meet the expectations of the Trade. We have been singularly fortunate in procuring the assistance of, we may say, **REPRESENTATIVE AMERICAN TALENT** in the preparation of designs, and besides have secured the coöperation of some of the most **EMINENT EUROPEAN ARTISTS**.

OUR LINE IS NOW COMPLETED, and our agents are on the road to call on our patrons and friends. An inspection of the Sample Books will convince them that in regard to **ORIGINALITY AND VARIETY OF DESIGN, EXCELLENCE AND RICHNESS IN EXECUTION**, it far exceeds our last year's efforts. To give an idea of the high artistic order of the line, we would say that it comprises:

FIGURE DESIGNS by Miss DORA WHEELER, Miss ROSINA EMMET, Miss L. B. HUMPHREY, Miss L. B. COMINS, ELIHU VEDDER, WALTER SATTERLEE, A. F. BROOKS, and others.

LANDSCAPE DESIGNS by W. HAMILTON GIBSON, THOMAS MORAN, F. L. SMITH, and others.

ANIMAL DESIGNS by B. E. BENSELL and HARRY BEARD.

FLOWER AND BIRD DESIGNS by Miss FIDELIA BRIDGES, Mrs. O. E. WHITNEY, JEAN ROBIE, of Brussels; H. GIACOMELLI, of Paris, and others.

THE LITERARY MATTER in connection with our designs has been carefully attended to—among others, by Mrs. CELIA THAXTER, Mrs. EMILY SHAW FORMAN and JOAQUIN MILLER.

OUR REGULAR LINE of Christmas and New Year Cards will comprise plain cards, fringed cards, and double fringed cards, varying in price from 30 cents to \$60, per set of 12.

PROTECTORS are furnished with all fringed cards, and also **ENVELOPES** for all series costing \$1.80 per set and more.

Besides our **REGULAR LINE**, we would call special attention to the following

NOVELTIES AND SPECIALTIES:

ALADDIN'S LAMP. This is one of the most elaborate and elegant Christmas Gift Cards we have ever offered to the trade. It is a large folding card, heavily fringed, and provided with a leatherette protector. The front outside page is a design of peacock feathers on satin; the left inside page contains a poem specially written for this gift by JOAQUIN MILLER, also on satin, and surrounded by a delicate border of Oriental design; the right inside page presents Aladdin bearing his lamp, after a painting by the eminent American artist, ELIHU VEDDER; and to complete the whole, the back is embellished with a most unique, artistic design of high order.

RUSKIN CALENDAR FOR 1884. At the solicitation of some of our business friends, we have this year decided to bring out a Calendar, and are happy to be able to announce that we shall issue **A CALENDAR FROM JOHN RUSKIN, FOR 1884.** This consists of an artistic mount with a block calendar, having suitable selections from JOHN RUSKIN's works for each day of

the year. The selections have been made by a lady well-known for her cultivated taste and judgment. The mount has been designed by a well-known Boston artist, and, coming from her thought and tasteful skill, the form and decoration will be a fitting accompaniment to the words within. This Calendar will be a source of pleasure to all who love and appreciate RUSKIN, that they may have every morning a jewel from the treasure of his noble and earnest thought.

"THE CHRISTMAS SHEAF." A folding card, with inside pages, in color, stamped out in the shape of a sheaf of wheat. Tied with silk cord and tassels.

"THE CHRISTMAS BOOK." A surprisingly natural representation of an open book, with floral designs by Mrs. FISHER, and original poems by JOAQUIN MILLER.

CHRISTMAS ART PRINTS ON SATIN.

The great success attending our efforts in this line has induced us to bring out a number of new Series, consisting of Flowers, Landscapes and Figure Designs. These are elegantly finished in several styles, in fringed tinted mats, with cord and tassels; on mounts, with silk fringe and cord; in book form, richly fringed and with leatherette protectors, and on rich Plush mounts. Prices vary from \$1.50 to \$3.50 each.

We have made large additions to our **BIRTHDAY** line, comprising Plain Cards, Fringed and Double Fringed Cards and Art Prints on Satin. Numerous Series at popular prices have been added to our list of **SCRIPTURE TEXT CARDS**. New **FLOWER PIECES** in Mats, &c. **THANKSGIVING CARDS**,—Our line will also be shown now.

Descriptive Price Lists of our **CHRISTMAS and NEW YEAR CARDS** are now ready, and will be sent on application.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

CABINET INKSTANDS.

There is perhaps no article in fancy hardware that can be found in a greater number of artistic and novel shapes than the inkstand. Fancy inkstands, made in a great variety of designs, have been multiplying each season, until now there are almost too many of these novelties for the good of producers. The accompanying engravings represent the "Crown" cabinet inkstands, and which are among the newest designs which have lately appeared. The material of which these inkstands are made is "royal" bronze, gilt, nickel and real bronze, handsomely polished and tastefully decorated with flowers and figures, raised and otherwise. The styles shown are designed in imitation of a cabinet. One is in the form of a desk, with sliding lids or covers for the inkstands, one of which is shown closed, another open. Two rests on the top of the stand serve as a pen-rack as well as an ornamentation. The stand has plain cut-glass bottles of extra thickness, and the projecting front of the base

finished than the first design, and may be preferred from its greater novelty. Grooves in the projecting base form a convenient pen-rack, and the top of the inkstand has a pin-cushion. It is provided with square cut-glass bottles, but another form on a like model has thimble-shaped receptacles for ink.

THE INK-PLANT.—The expressed juice of *Coriaria thymifolia* (a native of New Granada),

which is at first red, but turns deep-black in a few hours, forms an admirable ink, since it does not attack the pens, resists many chemical

TERRA-COTTA LABELS.

The *Journal du Ceramiste et du Chauffournier* remarks that on account of the porosity of terra-cotta articles which are not enameled, it is very difficult to write on them; which fact renders the employment of this substance impossible, in the form of labels in cellars or in gardens, although, on account of its durability and cheapness, it is specially well adapted for such uses. M. Wiencke proposes to remedy this inconvenience by steeping the labels in a milky solution, obtained by adding a little acid to skimmed milk, and by filtering the precipitate which is formed. It seems that after drying has taken place, it is possible to write on terra-cotta quite as well as on paper which has received a slight coating of size or paste.

—o:—

School desks made of glass form the subject of a patent taken out by F. Bender, of Dusseldorf, Germany. The table is made of so-called rough glass, finely polished on one side, and rough on the other. The finer side is used for writing, while the rougher is coated with coloring matter, consisting of Syrian lac, black and some dissolved black wax.

After the glass is sufficiently warmed, a thin coating of this is given and then polished with pumice, so that the coating penetrates the glass pores. The pro-

CABINET INKSTANDS.

may be used as a sponge holder, or a convenient place for pens, ink-erasers, &c. The other has doors opening from the centre, cabinet style, with cut-glass inkstands attached to the inside of either door. This is rather more elaborately

agents, and is always (?) ready for use. Attempts are at present being made to cultivate it in Austria, and the editor of the *Rundschau* thinks that if the acclimatization succeeds, the ink-manufacturers will have in it a dangerous competitor.

cess must be repeated several times, and finally a mixture pressed on to protect the colors. By this method the smooth side has a slate appearance. A white color can also be used.

THE POCKET-BOOK STAMP-HOLDER.

Nearly every one has felt the want of some handy device for holding postage-stamps in such a manner as to prevent them from sticking together. The Pocket-book Stamp-Holder, which is illustrated in the accompanying engraving,

should therefore prove a welcome addition to the numerous stationers' specialties offered by the trade, not only on account of its utility, but from the fact that it is the first article of the kind yet offered to the trade. The material of which the stamp-holder is made is nickel, and the size of the article is about an inch square. It opens like a book, being in the form of a flat metal case, and has the capacity for holding from twenty-five to fifty postage stamps. It is provided with a hinged spring cover, which stands either open or closed, like the blade of a

pocket-knife, and has upon its back a spring clamp by which the holder can be pushed down upon one of the inner leaves of any pocket-book, so as to be permanently attached thereto. The engraving shows the holder thus attached. It fits all kinds of pocket-books, portemonnaies, memorandum-books, &c., or, if desired, can be carried loosely in the pocket, the clamp serving as an excellent holder for car-tickets, cards, gold, coin, &c. It is well made, and is beautifully finished in nickel-plate and ornamented. R. R. Watson has it.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

POWER, FOOT & HAND Perforating Machines.

Acme Stationery and Paper Co., N. Y.

The Peerless Rotary Perforator and its advantages:

- FIRST.—It handles buckled paper as well as flat, and runs the work through straight.
- SECOND.—It has the best system for rapid and perfect feed.
- THIRD.—It has the best system for gauges, and can be more quickly adjusted.
- FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.
- FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent in the expense.
- SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.
- SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.
- EIGHTH.—Each machine has a scoring cutter attached.
- NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

William J. Wilson, printer, Boston, Mass., has failed.

William L. Tilley, newsdealer, &c., Newport, R. I., has sold out to E. Goffe.

J. W. Kendall, publisher of the *Carrier*, Canton, Kan., has sold out to Milton Rice.

Horace G. Hewes, dealer in artists' materials, Portland, Me., has gone into insolvency.

C. N. Stimpson has bought out the business of F. A. Whiting, music dealer, Springfield, Mass.

Webster, Bates & Co., wholesale stationers, &c., Kingston, Ont., have dissolved partnership.

The firm of Cruise & Lyons, publishers of the *Montrose Democrat*, Montrose, Pa., has dissolved.

F. J. Portz, dealer in wall-paper, &c., Shenandoah, Pa., had his stock damaged by fire on the 12th inst.

A receiver has been appointed for the Robins Manufacturing Company, manufacturer of printing press machinery, Camden, N. J.

West Brothers, publishers of the *Springfield Sunday News*, Springfield, Ohio, have filed a petition for the appointment of a receiver.

M. E. Doyle, publisher of the *News*, Shenandoah, Pa., was burned out on the 12th inst. Loss estimated at \$5,000; reported not insured.

The *Mining Herald Company*, Limited, Shenandoah, Pa., was burned out recently. Estimated loss, \$10,000; reported insured for \$4,900.

J. E. Shepard & Co., dealers in novelties, Cincinnati, Ohio, have made an assignment under a mortgage foreclosure amounting to \$13,585.

G. W. Barter, publisher *Index*, Tucson, Ariz., has admitted F. D. Reymert to partnership. The style of the firm has been changed to Barter & Reymert.

Miller, Buckwalter & Rigby, wholesale dealers in specialties and notions, Philadelphia, Pa., have dissolved partnership. The business is continued by Miller & Buckwalter.

William L. Zimmer, of the firm of William L. Zimmer & Co., Petersburg, Va.; Frank Hadley, New Bedford, Mass.; Edward Perry, Charlestown, S. C., were among the out-of-town tradesmen who visited New York during the past few days.

A novelty in calendars is a rectangular-shaped card, with easel attachment. The card is embellished with a beautiful chromo engraving and a fanciful gilt border. The calendar attachment consists of a roller. Instead of tearing off the calendar of each month, it is neatly clipped off with a scissors, and that of the succeeding month is rolled into position.

The Palmer Art Company has recently brought out several new designs in handkerchief and glove cases made up in quilted satin of two or more colors. They open like a book, and contain pockets for gloves and handkerchiefs. In plush card-cases, too, the company is offering several new designs. These goods are made of the finest quality of plush of various colors and embellished with silver appliqué.

Willing & Williamson, dealers in books and stationery, King street, Toronto, Ont., have failed. They bought out the old firm of Adam Stevenson & Co. some years ago. They are said to have been crippled by a lack of capital, and a crisis resulted in an assignment to John Kerr, Toronto street. A few hours after the assignment judgment was obtained by the Bank of Commerce against the firm for \$15,000, and the sheriff seized the goods. The liabilities are placed at \$65,000 and the assets are nearly \$80,000.

Our Society Journal is the title of a new paper "devoted to the interests of assessment life insurance, literature and the welfare of the people." It is said to have started with a circulation of 23,000 copies. It is independent in policy, and is published by the *Journal Publishing Association*, New York.

Dealers who handle Family bibles or photograph albums should send to the National Publishing Company, Philadelphia, for its catalogue and discounts. Now is the time for a large demand for these goods, and the National has an immense variety at remarkably low prices.

Harvey & Ford, ivory and wood turners, Philadelphia and New York, have dissolved partnership. The interest of Edwin and Montgomery Ford has been purchased by Joseph and William Harvey, who continue the business under the style of Harvey & Co.

A Dixfield, Me., toothpick factory recently shipped to Chicago its third car-load (the present season) of toothpicks. A car contains 428 cases of 100 boxes each, with 2,500 picks in each box, or 107,000,000 picks.

The Booth & Osgood Manufacturing Company, manufacturer of school furniture, Belding, Mich., has confessed judgment in the sum of \$30,000. The business of the company has been closed by the sheriff.

Robert Orr, dealer in periodicals, &c., Clinton, Mass., recently reported sold out, is reported to be offering 30 cents on the dollar, which most of the creditors have accepted. Liabilities about \$3,000.

Articles of incorporation have been filed by the Terre Haute Paper Company, Terre Haute, Ind., and a capital stock paid in of \$75,000.

William J. Wilson, printer, Boston, Mass., is reported failed. Liabilities about \$13,000. The assets are of no account.

Andrew Jardine, of the firm of Andrew Jardine & Co., manufacturers of paper-hangings, Rahway, N. J., is dead.

Mr. Johnston, of West, Johnston & Co., Richmond, Va., is in town, buying largely and solely for the holidays.

An assignment has been made by J. W. Prasser & Co., dealers in wall-papers, &c., Jamestown, N. Y.

An assignment in trust has been made by Bennet & Co., wholesale stationers, Montreal, Que.

J. F. Graham has bought out the printing business of W. S. Smith & Co., Memphis, Tenn.

The Three Rivers Printing Company, Three Rivers, Que., has sold out to Dorion & Voyer.

Gordon & Smith have succeeded Eliza Gordon in the publishing business, at Springer, N. M.

An assignment has been made by J. W. C. Sedgewick, stationer, New Bethlehem, Pa.

George M. Watkins, publisher, Minden, Neb., has sold out his business.

F. G. Smith, publisher, Akron, N. Y., has sold out to King & Murray.

John P. Eckstrom, dealer in picture frames, Chicago, Ill., has made an assignment.

Mrs. E. A. Phillips, dealer in fancy goods, Canon City, Col., is advertising to sell out.

The Cincinnati house of J. E. Shepard & Co., dealers in novelties, Kansas City, Mo., has assigned.

B. H. Richardson, publisher of the *Savannah Times*, Savannah, Ga., has been succeeded by the *Savannah Times Publishing Co.*

The firm of Smith Brothers, stencil cutters, Savannah, Ga., has been dissolved. The business will be continued by Smith & Berry.

The schedule of the insolvent paper house of Hinman, Moody & Co., Beloit, Wis., shows liabilities of \$185,000 and assets amounting to \$84,000.

It is said that the failure of the Booth & Osgood Manufacturing Company, of Chicago, school supplies, resulted from trying to do a large business on a small capital, and by losses through the firm of Culver, Page, Hoyne & Co. It has a branch at Belding, Mich.

F. W. Devoe & Co. have a corner on luminous pictures, being the sole manufacturers. The size of these pictures is 5½ by 6½ inches. The subjects are: "Mater Dolorosa," "Ecce Homo," "Madonna and Child," "Sacred Heart" and "Masonic Skull," which come with both gold and black ground. The firm also offers the "Luminous Cross" in various sizes, some with the figure of Christ on them.

The new catalogue of Aikin, Lambert & Co. is got up in very handsome and elaborate shape. As a trade document it should be seen by all dealers who wish to keep posted regarding the latest novelties. The number of different designs in barrel pens, with ebony and rosewood holders, fancy pencils, mounted celluloid pencil-cases and pencils, gold toothpicks, charms, and other novelties number 654. All of the leading styles, besides a large addition of strictly new goods manufactured exclusively by the firm, are represented in great variety.

The New Castle Paper Mill, at New Castle, Pa., was burned to the ground on Friday, November 16. The fire was discovered about daylight, and, owing to the inflammable material stored in the building, quickly spread to every nook and corner of the large establishment, and in half an hour nothing remained but smoldering embers. The origin of the fire is a mystery, but is believed to have been the work of an incendiary. The loss will exceed \$50,000, on which there is \$35,000 insurance. The mill was owned by the New Castle Paper Company, a stock concern composed of local capitalists.

During Monday night of last week a remarkable fire occurred in Hensell's stationery establishment on Camp street, New Orleans. The fire was remarkable because the room in which it occurred was filled with the most combustible material, and a conflagration did not follow. The store was closed on Monday night and the goods covered as usual with linen. Yesterday morning when the store was opened it was found that one of the linen covers in the front room up stairs had been entirely consumed, and that all the goods on the table were damaged. The cover must have burned very slowly, and, strange to say, the end of the cloth which fell into a large basket of paper had burned to ashes, the paper in the basket had caught but the fire had died out of its own accord. It is thought that the fire was caused by one of the

clerks smoking a cigarette when he covered the goods.

C. H. Coffin, of the firm of Coffin Brothers, paper-box manufacturers, New Bedford, Mass., is dead.

L. Graham & Son, printers and stationers, New Orleans, La., are asking for an extension of time.

Esther Meltzer, dealer in paper stock, &c., Worcester, Mass., has filed a married woman's certificate.

Homer & Co., manufacturers of gelatine dry plates, Cambridgeport, Mass., have sold out to Bond & Fiebigler.

H. H. Bragg, of the firm of Bragg, Conant & Co., dealers in mirrors and fancy boxes, Boston, Mass., is dead.

John H. Vivian, proprietor of the Vivian Publishing Company, formerly of London, Ont., has removed to Toronto.

A dissolution has taken place in the firm of Hebb and Goodwin, printers, Terre Haute, Ind. The business will be continued by George H. Hebb.

Frank M. Scott, with Lee & Sturges for several years, has recently taken a position with S. & E. M. Vernon, blank-book manufacturers. The blank-book trade seems to agree with Mr. Scott, as he is looking much better than before, and has gained in weight.

The Wilson Brothers Toy Company, which is the sole agent for Milton Bradley & Co.'s new games the "Fascinator" and the "Bicycle," are selling these games in quantities far exceeding the most sanguine expectations of the originator. The games are new this season, and have been popularly received wherever introduced. The toy whips manufactured by the Wilson Brothers Toy Company are claimed to be superior to anything in the trade in that line.

C. M. Ward, the New York agent for the Globe Files Company, reports a largely increased trade lately in the Globe cabinet files, which have become exceedingly popular with business and professional men as well as with others who find it necessary to keep documents, letters, private memoranda, &c., in such a way as to enable them to refer to the paper wanted at a moment's notice. The Globe music files have been manufactured in large quantities to meet the demand for them this season. They are some of the most popular articles in the trade. They are made for vocal and instrumental music combined and separately, so as to suit all buyers. The inside arrangement is an alphabetical index made of the very best material, and securely fastened in the files on metal rods. The top leaf or cover is embellished with a fine portrait of one of the well-known composers. They are very elegant in appearance, being covered with morocco and embossed in gold on the sides and back. As ornaments for the piano or library they are very fine.

With the November number, *The Pansy* (D. Lathrop & Co., Boston), a weekly magazine devoted to juvenile literature, enters upon its second volume. The number is crowded with entertaining articles interspersed with numerous illustrations. "Christie at Home," by Pansy, is a somewhat lengthy article describing the experiences of Baby, Karl and Christie Tucker, who went sleighriding in the country, and participated in other experiences interesting and instructive to the little ones. The popular juvenile writer, Faye Huntington, has several short stories in her characteristic vein. "How the

Geese Saved Rome" is an interesting historical story, by Margaret Sidney, of how, many centuries ago, Rome was saved from being taken by the Gauls by geese kept sacred to Juno. "Seeing the World on Donkey-Back" is an article by the same writer, embracing a description of the travels of Tommy Henderson in Spain. Altogether the number is one of unusual interest.

H. P. French, of French & Choate, has just returned from a trip East, where he reaped a harvest of orders for the numerous specialties of his firm.

Foley's Patent Improved Stylographic Pen.

Great reduction in price: No. 1, \$1.50; No. 2, \$2.00; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

EVERY STATIONER

SHOULD KEEP A STOCK OF

Helotype & Engravings.

Beautiful Engravings, finely finished and carefully chosen, and very suitable for the decoration of rooms, when neatly framed; also for portfolios, and to be studied as types of art. They contain the finest works of the ancient Italian and German Masters, and also the very choicest of modern French and British Pictures.

They are printed with black ink, on heavy hevelled plate paper, 19x24 inches in size, and are sold for the remarkably low price of

FIFTY CENTS EACH.

A few of extra large sizes are One Dollar each.

They have come very generally in use for the adornment of library and parlor walls. There is now a wide variety of subjects, including the masterpieces of Ancient and Modern Art, Religious Pictures, Madonnas, Domestic Scenes, Landscapes, Battle-Pieces, Deer, Dogs and Horses, and many others.

The list includes the choicest and most famous works of Alma-Tadema, Bastien-Lepage, Bouguereau, Cabanel, Makart, Meissonier, Landseer and other modern artists; and Raphael, Titian, Angelo, Guido, Leonardo and other ancients.

No lovelier present can be devised than a pair of these lovely pictures, neatly framed.

Our Books are for sale by all Booksellers, or will be sent, post-paid, on receipt of price. Our regular catalogue, and our 40-page descriptive catalogue of 400 Helotype Engravings, will be sent free to any address.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 22, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

MONDAY next, being Evacuation Day, will be generally observed as a holiday. The parade will be immense. It will be a good day to see New York.

THE progress of affairs in nearly all portions of Mexico is seemingly most satisfactory. As the principal part of this progress is the result of American capital and brain, it is pleasant to note that trade with the United States keeps pace with the internal development. Our Consul at Tuxpan says that the exports from that port to the United States now amount to over \$600,000, against \$64,000 in 1874.

It is plain that much distrust exists in commercial as well as in financial circles. When we seek for the reason we need not look far. It is primarily speculation, particularly that in stocks and grain, and the money changers are the most responsible. Indeed, it is a day of tribulation for the stock-brokers and manipulators of the markets, except, perhaps, for those whose enormous wealth enables them to sweep everybody and everything before them—indifferent alike to the public situation or to the claims of the general community. This want of confidence is painfully evident in stock-jobbing and financial circles, and must, of course, impress itself upon trade. There is no market for stocks, and brokers are despairing of making a living, discharging their clerks and paring expenditures to the narrowest limit. This is something which indicates extremity, for we all know the generally bountiful and extravagant habits of those whose business lies in the "Street" or on 'Change. Some people are unable to account for this difficult situation, but there does not seem to us to be any uncertainty as to its origin. It is the result of recklessness and of making the public—too easily deceived—the sport and spoil of manipulators. The "lambs" are wiser than they were and are now full grown, unwilling to part with pelts as well as with fleeces. The prevalence of speculation is the secret of all distrust, and until something terrible occurs or some revolution happens to ingulf those who have neither morals nor judgment in their business operations, we fear that confidence will not be assured. But there is a business sense, a solid sentiment which, if asserted, can pull through all distractions. This, has its foundation in the true business class of business men—the manufacturers and merchants who will not be led astray by glowing promises or the excitement of prospective large gains upon insecure credits and shaky investments. To this class the work of securing commercial safety is intrusted, and we do not believe that they are indifferent to their duty. Cautiousness and reserve in bestowing credit will have a wise effect in repressing ill-advised efforts to get rich in a hurry or to tempt fate upon hazardous chances, and will defeat fraud in its efforts to cheat and swindle. To this sound business sense and safe judgment let

us intrust the management of commercial ethics and the reassurance of confidence.

ROUNABOUTS.

BY THE TRADE LOUNGER.

Some little spurt in trade this week. The "bargain men" have been holding off, and seem to have made a success of it in some lines. They don't get the choice of the market, however, but have to take up with what is left, sometimes picking up a good thing.

* * * *

Considering this, I wonder whether it wouldn't be just as well to make bargain prices all through the season, and not have an annual clearing out "just to make room for new stock." Somebody will laugh at this suggestion, I know, and ask what sort of a visionary "cuss" I am; but "allege samee," I think it.

* * * *

But, of course, I don't mean to say that I know anything more about the trade than those who are in it and "doing their little grind" every day. I only express my views, which are identical with my practice.

* * * *

Not long ago the "Lounge" had something to say about a pattern of straightforwardness in the milk trade. Just now comes a paragraph from a Springfield paper which has a quiet little suggestion apropos of the former, and is not without its streak of fun. It is as follows:

* * * *

"A Connecticut pump manufacturing firm has issued a circular announcing that it will, after November 20, employ no man who is addicted to the use of liquor. This move is purely a business one, as will readily be seen. The spread of the use of liquor lessens the demand for milk, and stagnation in the milk industry always reacts on the manufacture of pumps."

* * * *

In this I discover another instance of the interweaving—so to speak—relations of all and different lines of business. Of course, the literal reader whose mind is slow to discern, will wonder and perhaps ask, What has this to do with the stationery trade?

* * * *

I may say that I expect just such an inquiry, and would remark that the trade are very much addicted to the use of milk. They are consequently interested with the manufacturers of pumps. If they were not—why, it would be the other thing.

* * * *

The editor of THE STATIONER has handed me a letter from John Holland. He does this because he is too lazy to put it in the paper himself or for some other reason. Perhaps he thinks that people would rather read what I say than what he writes. If so, his head is level. How's that?

* * * *

But, of course, you are all on tiptoe of anxiety to know what John Holland has to say. I shall condense. He says that a "certain James J. Walker" is traveling around the country making drafts on him and certain other manufacturers. W's business in this line for the past two months has been in the South. Kind-hearted members of the stationery trade have been cashing Mr. Walker's drafts. Now, Mr. Holland wants it to be understood that he never employed Walker and doesn't owe him anything.

* * * *

You will recollect that THE STATIONER

had something to say, not long ago, about the mysterious disappearance of this same Walker. He left his wife in New York, and, judging from what she says, she wants to stay left. Some other manufacturers have disclaimed Mr. W., notwithstanding that he has been understood to be their representative.

From all this the trade will gather that Mr. W. is N. G., so far as Mr. Holland is concerned.

Just on the heels of this comes another bit of a communication which that editor thinks I might as well utilize. He tells me that I might as well make myself useful as nonsensical. What do you think of that, boys? If he was as useless as I, where would he be?

But this bit of a note says: "We understand that the man, James J. Walker, reported by your journal as having left his home suddenly some weeks ago, has turned up quite recently in Texas, and that *en route* he has made drafts on Northern firms that have not been paid, thus victimizing his friends and those of merchants and manufacturers here. This man should be handed around as a deceiver, surely. The stationery and kindred trades know him well, and his last victims are among well-known substantial jewelry firms. Show him up."

There, I have put that in verbatim. The editor can't be any lazier than I, when I've a mind to be. Seems to me that the showing up business is complete.

Looking over some recent decisions of the Treasury Department, I find some which are of interest to the trade. Among these are the following, stripped of all verbiage:

Certain leather purses with metal clasps were charged with duty as manufactures of iron. The Department rejects this classification and says that the purses are dutiable at the rate of 35 per cent. ad valorem—coming under the head of pocket-books.

Whist markers, however, made of paper and brass or of paper, leather and brass, come under the head of merchandise not specially enumerated, and the brass being the most important and valuable feature, subjects the markers to a duty of 45 per cent. ad valorem. This is something a little in the other direction.

Wafers, intended to be used as trade-marks or labels, were assessed for duty on the ground that they are not the ordinary wafers of commerce, but it is decided that they come in on the free list.

Silk stockings for dolls are dutiable at 35 per cent. ad valorem, being "essentially parts of dolls, and as such, toys for the amusement of children."

But we are met with another adverse if not queer decision. Photograph albums, plush covered, not being specified by name in the tariff, are decided to be liable to duty on the component material of chief value. This material being silk, fixes the duty at 50 per cent. ad valorem.

Next Monday is our "hoodoo" day. I

expect to air my fancy clothes. Come and look at me—all of you.

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, November 21, 1883.

THE MONEY MARKET.—The money market continues without new feature, call loans on stock remaining $2\frac{1}{2}$ per cent. The condition of the stock market may be concisely expressed as dull but steady. The most encouraging feature, perhaps, is the large investment in railroad mortgages, indicating as it does the confidence of investors in an improvement in the value of such properties. Government bonds show an advancing tendency, which, with the low rates of interest, cuts into the profits of national bank circulation; hence the gradual contraction of the latter. Railroad bonds were fairly active and irregular. Sterling exchange is in light supply, and rates have further advanced, while Continental remains steady.

THE PAPER MARKET.—Although business generally among our city dealers cannot be said to have made any improvement since last week, there is withal a fair trade doing, even if prices are lower, and profits more slender than a year ago at this time, the increased volume of sales going far toward making up the deficiency in this respect. With possibly one or two exceptions prices remain steady and even firm, most manufacturers being fairly well engaged on orders. Although several weeks have elapsed since the drought was broken, the increase in goods coming into the market has not had any perceptible effect on prices, and it is thought that there will be no change for the remainder of the year. Writings hold their own very well. Book and news, while very low in price, retain the same steady position as for some time past. Manillas are very firm and in fairly good demand. Straw boards and wrappings are slow to move, with prices weak and nominal. Binders' boards are steady, but dull.

THE STATIONERY MARKET.—A little better feeling prevailed in the trade this week than was indicated last week. Business has somewhat braced up. The cold wave seems to have acted as a sort of tonic. At any rate there has been more backbone among buyers since its advent. The improvement is in the local and near-by trade. The character of business is what may be called the late trade. A large class of dealers, in order to get the benefit of a natural decline in prices, put off the bulk of their orders until the close or near the close of the fall season. In staple goods generally there has been a more brisk demand. Gold pens, charms and other novelties are commanding a good share of business. Orders come in thick and fast, and manufacturers have to work night and day to fill them. In Christmas cards, also, the trade is very fair. There have been more orders for these goods than there were a few weeks ago, but for small quantities only. Dealers report a better trade in plush goods this week, as a result of the late trade. In steel pens the demand is steady and uniform. The envelope trade is about the same as heretofore, and prices remain unchanged.

GRAPHITE.

The recently published "Mineral Resources of the United States" contains a short but interesting account of the graphite industry in this country. As a mineral, graphite is widely distributed in the United States; as an ore, it is found in but few places in sufficient quantities and purity to be profitably worked. In the older rocks of the Appalachian chain from Alabama to Canada it is of frequent occurrence, while several discoveries of it have been reported from Michigan. It is also found in various parts of Colorado, Wyoming and Dakota. The deposits of Pennsylvania, New Jersey, New York and Canada are of the crystalline or foliated variety, are the best known, and are the only ones which are at present being worked. The deposits occurring in Alabama, North Carolina and Virginia are of the amorphous variety. They are of such a nature that purification is economically impossible. The Western deposits are still undeveloped. Graphite is now generally conceded to be of organic origin—the result of the metamorphism of some of the products of destructive distillation of vegetable tissue. It occurs in veins, beds, and disseminated through strata (graphitic schists). The veins occur principally in New York, Canada and the far West. They are true fissures in gneissoid rock. The vein graphite is usually associated with calcite and quartz. The only place in the United States where graphite is now mined successfully is at Ticonderoga, N. Y. This vein deposit has been worked by the Dixon Crucible Company to a depth of 600 feet. Numerous attempts have been made to work the similar deposits of Pennsylvania and New Jersey, with only partial success. In 1882 the output of the Ticonderoga mine was 400,000 pounds. The outputs from the other mines have been so spasmodic that it is impossible to give them accurately. Probably 25,000 pounds would cover them all, making a total output in 1882 of 425,000 pounds.

The estimated output for 1883 is 525,000 pounds. The average spot value may be stated at 8 cents per pound. Commercially graphite is known as German black lead, Ceylon plumbago, and American graphite. German black lead is a product of Bavaria. It is of the amorphous variety, and is dressed chiefly by washing. Its price depends on its percentage of graphite and the nature of its impurities, varying from \$1 to \$10 per hundred-weight in cargo lots. It is used in the manufacture of pencils, stove polish, and foundry facings. Ceylon plumbago is mined at Travancore, Ceylon, and is shipped from Colombo to all parts of the world. It occurs in immense veins of great purity. It is used for all the purposes of the trade, except the manufacture of pencil leads. American graphite, from the nature of its occurrence, appears in the market only in the dressed condition. Its price ranges from \$2 to \$10 per hundred-weight wholesale, according to purity and fineness. Fineness exercises considerable influence on the price of graphite, on account of the difficulty of pulverizing it. American graphite is used for all purposes of the trade, and excels all kinds as a lubricant. It is the same geologically, &c., as the Canadian.

The properties of graphite make it useful for the following general purposes: The manufacture of refractory articles, lubricants, electrical supplies, pigments and pencil leads. A detailed table of the articles made from it is annexed, with an estimate of the percentage used for each purpose:

Manufactures.	Kinds of Graph'e Used.	pt. ct.
Crucible and refractory articles, as stoppers and nozzles, &c.	Ceylon, American....	35
Stove polish.....	Ceylon, American, German.....	32
Lubricating graphite.	American, Ceylon....	10
Foundry facings, &c..	Ceylon, American, German.....	8
Graphite greases.....	American.....	6
Pencil leads.....	American & German..	3
Graphite packing.....	Ceylon, American....	3
Polishing shot and powder.....	Ceylon, American....	2
Paint.....	American.....	$\frac{1}{2}$
Electrotyping.....	American, Ceylon....	$\frac{1}{4}$
Miscellaneous: Piano action, photographers', gilders' and hatters' use, electrical supplies, &c.....		$\frac{1}{4}$
		100

The growth of the graphite industry has kept pace with the age, each new development in metallurgy and engineering offering some new field of usefulness for graphite. For instance, it furnishes the pots for the manufacture of cast steel, and the nozzles and stoppers used in the Bessemer process. It is used in the manufacture of electrical supplies, &c. Fifty years ago graphite was little known and misnamed. Now it is of constantly increasing importance.

One of the most charming juvenile books of the season is "There Was a Little Girl," by Henry Wadsworth Longfellow, illustrated by Bertha M. Schaeffer and published by R. Worthington, 770 Broadway, New York. This little story in rhyme of "The little girl who had a little curl," is one of the happiest tokens of that genial and simple-hearted temper which made the great poet the most lovable and beloved of men. The artist, in her beautiful illustration, has most fittingly interpreted the "story in verse." The work is finely gotten up, the paper, the text and the beautiful binding in fringed edge, in a box, being of the most tasteful kind.

SILICATE BOOK SLATES,

BLACK DIAMOND SLATING,

REVOLVING BLACKBOARDS,

LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

MONTREAL MINUTES.

[FROM OUR REGULAR CORRESPONDENT.]

MONTREAL, November 20, 1883.

Some considerable time has elapsed since my pen has been dipped for the purpose of giving you a word from our city.

Business up till October was good—in the staple stationery and blank-books, I may say very good. There has been a considerable falling off, though, since that time.

Most of our leading binderies complain of dullness, and some have been discharging hands. Some think, and with a very good show in their reasoning, that the present depression is in great part owing to the N. P. or protection policy of our present Government, and has resulted in an over-production. Certain it is that there are too many goods in the country of all kinds. The cotton trade was the first to have a collapse, the circumstances of which, no doubt, you are fully acquainted with.

As a consequence, the wise and prudent ones are not buying much and are awaiting the issue of things; by the first of the year we shall know the worst or the best, then the weak ones will doubtless drop out and the strong ones will take fresh courage and go on and, if possible, make money.

Bennet & Co., stationers and paper dealers, failed last week, with liabilities of over \$48,000, of which about \$26,000 are direct. Mr. Bennet was formerly in the employ of the Canada Paper Company and started for himself some seven years ago, but has been more or less hampered for want of capital. He lost by the recent failure of John Yule, of Chambly, and finding that prospects were not improving, and some claims pressing, he concluded to secure, as far as in him lay, an equitable division of the assets among his creditors.

Buntin, Boyd & Co. report a fair fall trade, as do McFarlane, Austin & Robertson. The Canada Paper Company is still pushing ahead, with mills going on print, manillas and browns. Wm. V. Dawson, Cowan & Co.'s agent, speaks of fair business. J. B. Rolland & Sons showed me a sample of the first product of their mill out at St. Jerome. It was submitted to your correspondent as a No. 2 print, but looked more like a No. 3, and very bad color at that. However, try again, I say; perhaps the next lot will not be so muddy-looking.

J. C. Wilson & Co., of Lachute Mills, are making a very good manilla—nice color, a good strong sheet and splendid surface. Their bag business still "is to the fore," they have added envelope making to their already largely increased lines. Go ahead, "Alderman;" long may you wave.

Dawson Brothers are in much more commodious and convenient quarters than when I last wrote, and still are keeping ahead in their publishing, book-selling and stationery departments. Their extensive bindery is kept fairly busy, notwithstanding the "dull times."

Morton Phillips & Bulmer report bindery work quiet, the printing office moderately busy, stationery department a steady run of trade, nothing very heavy, but good for the times.

J. Fortier, Drysdale and others all speak much in the same way.

I have just been shown a sample of "grass pulp" made by the St. Lawrence Pulp and Paper Company, of Sorel, in our Province. It is a splendid sample and tough and hard enough to bear writing upon. The company's capacity is three tons in twenty-four hours at present. I will tell you more about it at another time.

G. W. Clarke's mammoth fancy goods and stationery store is fuller than ever of goods. He has the most magnificent display, without doubt, in Canada, and he opened to-day a special room for Christmas and New Year cards exclusively. He has great courage and hope in laying in such a stock of goods for this season.

This branch of trade is complaining very badly of light sales.

Now, Mr. Editor, I may not have struck just the note that your readers like, but I have tried to give you trade facts, and not weather, religious or local gossip, or tried to air my "book-larnin'"!

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

→THE NATIONAL PAPETERIE COMPANY,←

ANSWERS TO CORRESPONDENTS.

E. & C. want to know where to get the new wire stitching machine illustrated in *THE STATIONER*, November 8.

Ans.—W. H. Hasbrouck, New York.

T. N. & S. ask for address of a manufacturer of "paper coating" machines.

Ans.—J. & F. Cavagnaro, 216 Centre street, New York.

H. H. wants address of manufacturer of Miles' patent wall-pocket and luminous match safe.

Ans.—We are told that J. B. Colt & Co., corner Canal and Elm streets, New York, are the manufacturers.

ELECTRICITY IN STAGE ILLUSIONS.

The advantage of electric over other lights for stage purposes is its intensity, which produces sharp outlines to all shadows, and its perfect similarity to sunlight, the most delicate colors being unchanged by its rays. In the "Prophète" the rainbow is most faithfully represented by its aid.

In the second part of "Faust," M. Behrend utilizes incandescence for working a miracle. A bottle is seen suspended or balanced in the air. Suddenly it becomes dimly illuminated, the light gradually increasing to brilliancy, and a human figure is seen within the bottle. This bottle, which is made of gelatinized gauze, is held suspended by two iron wires. An opaque band about the neck of the bottle serves to hide the direct rays of the incandescent lamp, while the downward reflection lights the figure. This last is of rubber, and a wire attached near the middle serves to render it misshapen. By degrees the wire is slackened, and the figure, through its elasticity, rises and assumes a human form.

In the second part of "Faust," a mysterious key is rendered red hot, apparently while in the hand of the actor.

This key, which is quite large, is made with a frame of iron wire, covered with thin mica painted red with a transparent pigment. In the interior of the key are small platinum wires connecting buttons of less resistance. Two flexible conducting wires lead from the battery to two disconnected points in the shaft of the key through the platinum. At the proper moment the actor presses the key, closing the circuit and sending the current through the fine platinum wires, which, by their high resistance, are thus made luminous, and the whole key seems to become suddenly red hot.

In "Der Freischütz" a skull rises from the earth and launches fire from the eyes and mouth. To accomplish this, small bundles of wire are arranged so as to bring them end to end to each other, as if you were to place the brush ends of two brooms together. These are elastic and only in slight contact. From each of these a wire leads to one terminal of the battery. Now, when the head rises with a tottering motion and "solemnly wags," the motion breaks the contacts, and the escaping sparks scintillate at every break-point.

In the "Glass Slipper" the incandescent light is used to render the slipper luminous, and the diadem of the *Queen of Night*, in the "Magic Flute," is lighted in the same manner. So of St Elmo's fire in the "Phantom Ship," and the diamond rocks in the same spectacle, and other gems, are equally well represented by inclosing the lights in mica, glass, or gelatinized gauze. The star in "Faust" is almost of microscopic dimensions, in fact, until illuminated, and the effect produced by a sword combat, where these form the connecting terminals of a heavy battery, is fully as near akin to the marvelous in the spark shower thus produced.—*Chicago Tribune*.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

MERCHANDISE BY MAIL.

The Post-Office Department has issued an order which will hereafter require prepayment at merchandise rates on various articles which have heretofore been allowed to pass through the mails as "printed matter" at the rate of one cent for two ounces. The Postmaster-General recently decided that articles of merchandise sent by manufacturers or dealers are subject to merchandise rates although they bear printing, holding that it was never the intention of Congress to classify matter having no other value than that of merchandise, as printed matter, because of any printing it might contain. He took the view that in fixing a low rate of postage on printed matter, Congress could hardly have designed to discriminate in favor of dealers in such articles of merchandise as might happen to contain or bear printing. It was rather its intention, in accordance with the long established policy of the government, to favor the dissemination of information among the people by admitting reading matter in the form of newspapers, periodicals, books and pamphlets to the mails, at the lowest possible charge, and at the same time to encourage trade and manufactures by allowing unsealed printed circulars, catalogues, &c., soliciting custom, and giving prices and descriptions of goods, to pass in the mails at equally low rates.

An English paper maker has brought out a new "security" for bank notes, bonds and checks. The paper is hand-made and the method of production is at present a secret, but the novelty consists essentially of a square of dark-blue color interwoven into and forming an integral part of a sheet of cream-laid paper. The duplex appearance can be arranged in any shape and in any part of the sheet required, to suit either signature, number, amount, or any other purpose, and in any color or special shade.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platinum alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

— A SPECIALTY. —

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

Correspondence.

LOUISVILLE NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., November 24, 1883.

The course of trade this month has been steady and moderately active, offering very few features for comment. Staple merchandise is having a quiet jobbing demand, while manufacturing report average employment and a fair distribution of product. Of Louisville's specialties, the whisky trade is dull but improving, leather in slow request and prices unremunerative to tanners; plug tobacco firm and animated; furniture active and satisfactory; agricultural implements very brisk; cement moving freely; miscellaneous manufactures in iron and wood a fair average business mainly at light profits. The paper mills are doing reasonably well under a good general demand for manillas, book and news grades.

A special effort is being made to raise a substantial capital for the erection of an extensive cotton mill here, and the project seems to have a favorable outlook.

The clearing-house exchanges of this city maintain the recent high average increase as compared with previous years, and this in face of the fact that the figures of many leading cities show a decline.

In retail trade it has been essentially a weather market of late; business is good or indifferent according as the temperature is seasonable or otherwise. November has given but few days calculated to enliven the sale of winter goods, and the past week has been soft, mild and rainy to a spring-like degree.

Holiday goods are now coming to the front and the booksellers and stationers are already exhibiting fine bindings, Christmas cards, extra leather goods, elegant gilt pieces and other appropriate specialties.

The Southern Exposition was closed on the 10th inst. "in a blaze of enthusiasm and a boom of glory." The actual turnstile register showed the attendance for the closing day to be 31,000, and the total admissions for the season were 771,000. The receipts were about \$225,000; the running expenses for the one hundred days about \$160,000, showing a profit over running expenses of \$65,000. The amount of capital contributed by stockholders to inaugurate the enterprise was \$246,000. The plant (buildings, machinery and appurtenances) cost \$315,000, which now stands, nearly entirely paid for, the clear property of the stockholders after one season of successful operation. The directors are

now working to have a grander exposition even in 1884. The earnings of the Louisville and Nashville Railroad for the period covered by the Southern Exposition show an increase over the same time in 1882 of \$750,000, and the whole people have been benefited by its educational and social as well as its financial influences.

The Exposition committees on awards have made their reports, and medals for the successful competitors are now being made in Philadelphia.

The following awards are announced in group 23: Books, Stationery, &c.—Best display of books, Charles Scribner & Sons, first; D. Appleton & Co., second; John P. Morton & Co., third; best display blank-books, Gilbert & Mallory Publishing Company, first; best blank-book, John P. Morton & Co., first; the most elaborate and artistic finished blank-book, Knöfel, Berne & Co., first; best display of ledgers, Wm. F. Murphy's Sons, first; best display of record paper, Byron Weston, first; best display of plain stationery, John P. Morton & Co., first; Geo. H. Dietz & Co., second; best display of fancy stationery, Curry & Dearing, first prize; best display of holiday books, Charles Scribner's Sons, first prize; D. Appleton & Co., second; picturesque America, D. Appleton & Co., first prize; best display of steel pens, Esterbrook Steel Pen Company, first prize; best display of holiday and birthday cards, George H. Dietz & Co., first prize; John P. Morton & Co., second; best etchings in brass, Williamson Art Metal Works, first prize; best display of etchings, Williamson Art Metal Works, first prize; best display of interior decorations and art castings, Williamson Art Metal Works, first prize; best display lithographic label printing, Louisville Lithograph Company, first prize; Thomas H. Hastings (Compton Lithograph Company), second; Falls City Lithograph Company, third; best display for mercantile purposes, Louisville Lithograph Company, first prize; Falls City Lithograph Company, second; best display chromo lithographs, Louisville Lithograph Company, first prize; best display colored lithographs, Thomas H. Hastings (Compton Lithograph Company), Louisville Lithograph Company, Falls City Lithograph Company; best display of crayon work, Louisville Lithograph Company, first prize; Thomas H. Hastings (Compton Lithograph Company) second; best display of photographs, Frank Wybrant, first; J. Henry Doerr, second; Stuber Brothers, third; best display of interior photographs, Klauber & Co., first; best display of engraving on glass, James M. Ryan, first; best display diamond ink for glass engraving, E. Mechailovits, first; best historical chart, Colby

& Co., first; best display of paper boxes, Gilbert & Mallory Publishing Company, first; best display of folding paper boxes, J. S. Nugent, second; best display of ink, Carter, Dinsmore & Co., first; best display of astronomical drawings, Charles Scribner's Sons, first; best display of botanical charts, D. Appleton & Co.; best display of crayons, J. Henry Doerr, first; best measureograph, National Scientific Association, third; best ventilator, Willis E. Moore, second; best display of paper bags, Chatfield & Wood, second; best display of medical charts, J. O. Burch, third.

Possibly a few clerical errors may require slight changes in the above list.

Comparatively few traveling members of the trade have dropped in lately; Johnnie May of Porter & Coates, Philadelphia, and Mr. Vandagriff, for Scribners, were here last week.

BOURBON.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Nov. 3, 1883. }

Man proposes—the clerk of the weather disposes. We have been enjoying a fortnight of "samples," as your facetious countryman called the meteorological eccentricities which do duty here for a climate. Wind and rain, frost and heat have followed one another in rapid succession, and rung the changes with infinite variety, to the utter discomfiture of all plans formed on the basis of that "small mercy which we are so thankful for," a little settled weather.

Under these circumstances a tour of the Midlands was not to be thought of, so as "Bruin" could wait I thought I would console myself with that favorite resource of the weary Londoner, "a run down to Brighton," assuming, as a matter of course, that the elements would certainly be more propitious there. Brighton is one of the very few English towns possessing no historic interest (unless the disreputable Georgian associations count as such), of which we can be justly proud. Its handsome sea-front, its exquisite cleanliness, its numerous and splendid hotels, its bracing yet balmy air, and most of all its bright, cheerful sunshine—peeping out even when London is lost in fog—combine to render Brighton the glory and admiration of all England. Poets have sung of its delights; novelists have made it the scene of many a love-tale; humorists have found subjects for many a jest in the motley throng of visitors to its gay haunts. All have combined to do homage to charms which, like those of Cleopatra, "age cannot wither nor custom stale."

Brighton has been somewhat under a cloud of

late; indeed, she has not been herself for these last four or five years, owing partly to the increased facilities afforded for visiting Continental watering-places and partly to the depressed condition of trade in London, but chiefly to the libelous statements of the leading medical organ, the *Lancet*, respecting the sanitary condition of the town. The first and last of these causes have now ceased to operate; easiness of access has rendered the Continental resorts "common," while a full retraction of the damaging statements of the *Lancet* places the fame of the "Queen of watering-places" higher than ever. With regard to the other cause, bearing in mind the injunction "never to prophesy unless you know," I will only say that, if there is any improvement in trade, and if money is more plentiful, Brighton will be the first to benefit by the change, for no one would think of practising economy there. No! though the town house may be closed for ten months at a stretch and the country-seat let to Fitz-Abrams (late of Houndsditch), at Brighton one must "go the pace" and "keep up appearances;" so, whatever else may suffer, Brighton, "ever fair and ever young," has least to fear from depression and most to hope from any gleam, however transient, of financial and commercial sunshine.

Of course the trade of Brighton is principally in *articles de luxe*, so far as stationery is concerned, but equally, as a matter of course, that trade is by no means a small one. In every important street there are shops in which splendid displays are made of fancy goods, novelties and tasteful wares of every description. Of late years, indeed, Brighton has been in advance of London in the matter of novelties, and the shops supplying them have increased in number and importance. In addition to such old established houses as Treacher's and Wakefield's, there are numerous more recently established shops which would do credit to Regent street or Broadway. In a kindred line of business, such as pictures, old china and *bric-a-brac*, generally, there is always business doing, for Brighton is quite a happy hunting-ground for curiosity-mongers and connoisseurs, more or less qualified. It is to be feared, however, that many of the "genuine antiques" of North street and St. James' street are of somewhat doubtful origin, and that the supply is kept up by strangely occult means; but that concerns only the enthusiastic buyer and the astute seller, and is satisfactory to all parties as conducing to the welfare of the town.

I did not notice many shops in which the sale of American goods was made a specialty, but in those in which it was, there appeared, as in London, to be good business doing. These shops, moreover, have all come into existence since my last visit two or three years ago.

With regard to London, there is not much to record. Reynolds & Co., Marion, Tuck & Sons, Laurence Brothers and others report good business; so that there may be some ground for the predictions I referred to in a former letter, but all agree on the subject of prices, which are still very low—too low, indeed, for all parties.

W. F. C.

BOSTON ITEMS.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE OF THE LOCKWOOD PRESS,
49 Federal Street,
BOSTON, November 27, 1883.

This is holiday week. Business is very lively for the turkey dealers, but stationers don't seem to profit much by this feasting season. Trade

has slightly fallen off, not very much doing; still, dealers are making very attractive displays of their novelties, and retailers will experience some busy days yet before the year closes. Some few houses there are which will not even admit that there is any dullness just now, as they are kept so busy, but these are the exceptions. The tendency of large dry goods establishments to go into the stationery trade seems very detrimental to legitimate dealers, and although the complaint is loud, there does not seem to be any remedy for the evil, unless the stationers take in a line of dry goods to even up.

Ward & Gay are sending to the trade a very attractive circular, embellished with numerous illustrations of their varied line of novelties for the Christmas trade. Among the novelties offered is a lot of Japanese boxes of various designs and sizes, which are being closed out at low figures.

Cutter, Tower & Co. have arranged with the manufacturer of the Cross patent pocket-case, to handle that article, and are making preparations for introducing it to the trade. The pocket-case is an article of real merit, useful as well as ornamental, and meets with general favor among business men. The facilities possessed by this house, together with its enterprise in pushing a new thing, are all in favor of the pocket-case.

C. E. Stevens and E. L. Manchester have associated together for the purpose of carrying on the stationery business. Stevens & Manchester succeed I. W. Moody, formerly Proctor & Moody, and are located at the old stand on West street. The old stock held by Mr. Moody, which comprised a large assortment of goods, was disposed of to Ward & Gay, and the new firm starts out with a fresh stock of rich and elegant goods. Designing and engraving are to be special features of the new firm, for which a number of artists are employed. Mr. Moody remains with the firm, giving his personal attention to the interests of his business successors.

Knight, Adams & Co. claim that their trade in imported goods has been very large. In the ordinary stationery line business is such as to warrant no complaints. Next week they will open a fresh importation of low-priced goods for the local jobbing trade. These goods will comprise brass novelties and albums.

Something new in the way of letter files is just out. This new device for filing away letters does away with cabinets and drawers. It is certainly quite an innovation upon all previous methods of letter filing. The case, in which are arranged the numerous compartments, is made to be attached to the wall of a room, and can be readily converted into a standing-desk, if desired. When not in use it occupies but a small space. The quickness with which letters can be filed, the convenience of the device and its cheapness, will make the Gilman "Challenge" file very popular. Another useful article for the counting-room or office is the Gilman typewriter. For business men whose correspondence is not large enough for the employment of a skilled typewriter, the Gilman typewriter will be found most convenient. Its price is about one quarter of what is asked for ordinary typewriters. A stock company, for the purpose of manufacturing the letter files and typewriters, is about being formed in this city.

I am a little surprised to find that the trade here are so largely handling the blotting-paper of the Richmond Paper Manufacturing Company. To ship blotting-paper to Boston seems like carrying coal to Newcastle. Within a few miles of Boston is situated one of the largest

blotting-paper mills in the country, and in face of the fact that this paper has for years held this market, the Richmond concern has shown commendable enterprise in pushing its paper right up to the very doors of this New England mill. In view of the fact that the excellent qualities of the New England blotting-papers have secured for the manufacturers an extensive trade abroad, it would seem that the home trade might have been retained. The Boston agents of this New England mill admitted to me that their foreign trade was largely due to the publicity given their blottings through THE STATIONER, in the columns of which journal they ran an advertisement for two years. Their local business was also very extensive, resulting in part from the same cause. I would not have it understood that the house in question is losing trade, for its business is even larger, though it has changed its base a little; but now that a competitor is in the field the company will compete, not by cutting rates, however, but by the quality of its blotting-papers. A. L. D.

A BOOK OF OLDEN TIMES.

A curious and valuable book has recently come into the possession of S. A. Thompson, of Minneapolis, Minn., it being a Danish bible of the year 1583. It was printed at Copenhagen by Matz Bengaardt and is one of the second edition ever used in the Scandinavian peninsula. Its history is known for the past two hundred years, having been in the Svendsgaardt family for that time, and it contains the family record for most of this period. About seven years ago it was brought to this country by L. Svendsgaardt, and after changing hands several times, was recently purchased by Mr. Thompson in Otter Tail County. The book shows traces of its age, both from its worn condition and the style of its binding. The covers are of Norway pine, some five-eighths of an inch in thickness and covered with hogskin. The corners are finished in brass, figured in fanciful shapes, which have been battered and worn till whatever beauty they may once have had has been lost. The work is profuse in its illustrations and is valuable chiefly for these, as being well-preserved specimens of the engravings of three centuries ago. Quaint and curious are some of them. The creation of Eve is one such, the idea being taken from the literal wording of the Scriptures. Adam is asleep, and the Creator is drawing a fully developed woman from his side. A curious thing is that, in the sky, the sun, moon and stars are all to be seen at the same time. Many of the engravings, if not all, are made in accordance with modern rules of aerial perspective, a thing not always done in works of that century. A singular fact is that in the New Testament there are no engravings until Revelations is reached. The life of Christ has not a single scene, and the only representation of him is where he appears to John in Revelation. The value of the book is not far from \$1,000, and Mr. Thompson is in communication with parties East who wish to purchase it.—*Minneapolis Tribune*.

The manner of publishing the works of English authors in the reign of Henry III. was as follows: They were read before a chapter of monks or other judges appointed by the king or hierarchy in church and state, for three days successively; and if they were approved of, copies were permitted to be taken by writers and illuminators, who were almost invariably monks.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

Being Tripl. Sized (a process entirely our own) and Left Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

L. PRANG & CO.'S

1884. VALENTINES. 1884.

IN announcing our line of Valentines for 1884, we can say with confidence that, for novelty of design and artistic merit, it will meet with hearty approval. Pure and chaste in sentiment, the combined work of our best American artistic and literary talent, our line cannot fail to receive the support of the most refined class of buyers.

We have been guided in the preparation of our line by the success in former years, and by the expressed wants of the trade.

The following artists, among others, have contributed designs to our line for the coming season:

Miss L. B. HUMPHREY,
Mrs. O. E. WHITNEY,
Miss ROSINA EMMET,
Miss L. B. COMINS,
Miss ALICE W. ADAMS,

F. S. CHURCH,
HARRY BEARD,
C. Y. TURNER,
H. GIACOMELLI, of Paris,
F. SCHUYLER MATHEWS.

A varied assortment of Valentines by the above-named artists is offered in plain form, and single and double silk fringed.

ENVELOPES are furnished with almost all our Valentines, without extra charge.

BACKS.—We again beg to call attention to the elegantly designed backs on our Valentines, which are a special feature on our cards.

PARTICULAR ATTENTION IS CALLED TO OUR

Satin-Print Valentines,

Besides a number of **FLORAL DESIGNS**, put up in a number of tasty, novel styles, on silk mounts, plush mounts, &c. We call attention, with special pride, to our finest production in this line of goods, to the

"LION IN LOVE" VALENTINE.

This is a rich satin print, on an elegant fancy plush mount. The design is a reproduction of F. S. CHURCH'S important work of above name, which we have purchased for the purpose of the reproduction on satin. The poetry is by J. V. CHENEY. The picture is of the greatest artistic merit, and, on its elegant mount, forms, what we think, one of the most unique, artistic and sumptuous St. Valentine Souvenirs ever offered to the public.

Retail Price, in a neat suitable box, \$10.00.

DESCRIPTIVE PRICE LISTS OF OUR VALENTINES ARE NOW READY.

Besides our Valentines, we call attention to our **NEW BIRTHDAY CARDS**, including Satin Art Prints, New Scripture Text Cards, New Copies for Painting, &c.

Our line of **EASTER CARDS** and **EASTER NOVELTIES** will shortly be announced.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NOVELTIES IN BRONZE INKSTANDS.

Among the latest designs in fancy inkstands are those made of hammered bronze, one of which is shown in engraving No. 1. This article is made of real bronze metal, finished and ornamented in a very elegant manner. A spray of leaves and flowers, as shown by the cut, is arranged in such a manner as to gracefully curve around the bottles, the flowers forming a tasteful ornament, and the leaves projecting from the twig, or support, making a convenient pen rack. The bottles are of the finest cut-glass, ornamented with prism shaped ridges. They fit in a socket, and may be easily removed when it becomes necessary to cleanse them. The design shown in engraving No. 2 is of a fine polished bronze. The bottles are of cut glass, similar to those of the former design. A box in the centre may be used as a pen and stamp box, while the rack in the front is intended for a pen holder. Inkstands made of hammered bronze and polished brass, of which those shown in the engravings are samples, come in many different styles. A novel design has a base fashioned after a large oak leaf, with smaller leaves and flowers as ornamentalions. The leaf is concave, making it useful as a pen and sponge holder. Engraving No. 3 represents what is known as the "Library Inkstand." It is made of solid bronze, finished in old brass. It is in the form of a tray, with a handle on either side. In the centre is an urn-shaped receptacle, containing a glass for the ink. This inkstand is elaborately and tastefully decorated, as will be seen by the illustration, and is quite novel and unique.

—:O:—

NEW PATENTS.

No. 285,757. Slate-Pencil Sharpener.—William P. Kirkland, San Francisco, Cal., assignor to George B. Davis, same place.

A slate provided with a sharpener for pencils on the frame thereof, consisting of a gritty or abrading composition with a central aperture, set in a cavity in the frame, and the holding-plate, secured on either side.

No. 285,794. Book.—Edward L. Burwell, Chelsea, Mass.

A book or block composed of a number of sets or leaves, each set being composed of a bottom thick leaf, a superposed carbon or transfer leaf, and a top writing-paper leaf, connected together.

No. 285,836. Printing-Press.—Thos. McIlroy, Brooklyn, N. Y.

Provides a rest for the gages which will not interfere with the smooth delivery of the sheet to the impression-cylinder.

No. 285,837. Pocket Hand-Stamp.—Pembroke J. Patterson, Chicago, Ill.

A pocket hand-stamp made in disk form, with a segment-cover, carrying the inking-pad, and a hand part provided with an ink-receptacle, the lid and the cover being hinged to the

No. 285,917. Toy for the Production of Loud Explosions.—Bertha Ober, Urbana, Ill.

A toy consisting of a sheet of paper or other suitable material so folded as to produce an explosive sound when suddenly opened, by impact against the atmosphere.

No. 286,019 Check-Registering and Printing Apparatus.—Geo. W. Kendall and Chas. Kruse, New York, N. Y.

No. 286,051. Hand-Rest for Books.—Charles H. Metz, Utica, N. Y.

No. 286,066. Penholder.—Joseph Reckendorfer, New York, N. Y.; Bahelle Reckendorfer, Gustavus A. Goldsmith and William Strauss, all of New York, N. Y., Executrix and Executors of said Reckendorfer, deceased.

No. 286,099. Merchant's Stand for Paper Bags.—James E. Williamson, Berlin, Wis.

In a device for holding paper bags, &c., the combination of an upright standard, provided with an adjustable collar, with a revolving wheel supported on said collar, and bearing hooks or catches and pointed wires for holding the bags, &c., adapted to extend between and be secured by each adjacent pair of the hooks or catches on the wheel.

No. 286,208. Music Sheet for Mechanical Musical Instruments.—Jefferson Bailey, Providence, R. I., assignor to the McTammany Organette Company, Worcester, Mass.

No. 286,111. Blank or Composition Book.—Frank Bowman, New York, N. Y.

A blank-book or composition-book, consisting of a series of sheets and covers secured together at one edge, forming a stiff back, and perforated transversely near said edge, so that the sheets and covers may be readily torn from the back, the sheets and covers having also at a given distance in front of the tearing-perforations a series of eyelet-holes to receive a binding-cord, so that such sheets and covers will be accurately and readily registered in being rebound.

No. 286,112. Tag-Fastener.—Geo. N. Buck, Mattoon, Ill.

The combination, with a tag, of a tag-fastener having two prongs, both of which are passed through the tag, and are provided with pointed ends bent upward in a direction at an angle with the plane of the prongs, and a central loop which is bent upward out of the plane of the prongs, whereby the tag may be

turned to a position parallel with the plane of the prongs, to facilitate the insertion of the prongs into a roll of cloth, and be braced by the loops when pressed against the end of the roll in a position at right angles with the prongs.

DESIGNS.

No. 14,336. Font of Type Ornaments.—Charles E. Heyer, Chicago, Ill., assignor to Arthur M. Barnhart, Alton E. Barnhart and Charles E. Spindler. Term of patent, 7 years.

same pivot-bolt, and held open by a spring-hinge.

No. 285,840. Type-Writing Machine.—Warren R. Perce, Providence, R. I.

No. 285,897. Book, Album, &c.—Howard Hoppin and Arthur L. Brown, Providence, R. I.

A book provided with an additional cover containing one or more openings through which to examine the representations upon the leaves of the book.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

POWER, FOOT & HAND Perforating Machines.

E. B. STIMPSON, 31 Spruce Street, New York.

E. P. DONNELL & CO., Chicago, Ill., Mfrs. of Bookbinders' Machinery and Tools.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

S. P. Mobley, publisher, Grand Island, Neb., has sold out.

P. W. Briton, bookseller and stationer, Montreal, Quebec, has failed.

A. S. & J. L. Bosworth, printers, Beverly, W. Va., have sold out to John Hutton.

An assignment in trust has been made by Timms, Moore & Co., printers, Toronto, Ont.

Carl Huber has bought out the business of J. G. Feuchtinger, publisher, Portsmouth, Ohio.

A dissolution has taken place in the firm of E. Globensky & Frere, bookbinders, Montreal, Can.

The Lancaster Printing Company has bought out J. W. Quimby, publisher of the *Gazette*, Lancaster, N. H.

Powers & Cary, printers, Yarmouth, N. S., have dissolved partnership. Charles Carey continues the business.

E. P. Coby & Co. report a large trade in their calendars, which, as a staple article, have become indispensable to the trade.

Reuben H. Holbrook, proprietor of the Springfield Toy Manufacturing Company, Springfield, Vt., is reported to have left that town.

Lewis M. Castner, dealer in picture-frames, Williamsport, Pa., was recently burned out. Loss, estimated at \$1,200. Reported insured for \$500.

A dissolution of partnership has taken place in the firm of Marshall & Flynn, printers, Newport, R. I. The business is continued by Mr. Marshall.

J. Meyer & Co., importers and wholesale dealers in toys, &c., Philadelphia, Pa., have been damaged by fire and water from \$5,000 to \$8,000. Fully insured.

T. W. Croacher, dealer in picture frames, New Bedford, Mass., offers to settle with his creditors for thirty cents on the dollar. This has been declined, and he has gone into insolvency.

The Powers Paper Company will bring out an entire new line of Easter and birthday cards next week. The designs will be very fine, something new and fresh—just what the trade is looking for.

Hard & Parsons are offering a very extensive line of Easter, birthday, wedding-cards, &c., in new and original designs. These goods are creditable in every respect, and should meet with the attention of the trade they deserve.

Henry Levy & Sons are, so to speak, resting on their oars, having had an unusually busy holiday and fall trade, in which they are experiencing a not unwelcome lull. The firm reports that after Thanksgiving it will offer a fresh line of attractions to the trade.

A copartnership has been formed by Robert M. Patterson with Robert Smith as special partner for \$4,000 cash, in Philadelphia, Pa., for the publication of the *Presbyterian Journal*. The partnership is limited to November 15, 1886, and the style of the firm is Robert M. Patterson & Co.

Geo. B. Hurd & Co.'s reputation for producing novelties in fine writing-papers is further sustained by several new styles which they have just brought out. These are an imitation of watered silk, pebble goat and a new hammered silver pattern, which has larger indentations than the one previously shown by them. Each of these patterns they carry in four tints, and all are well adapted for opening invitations, &c., as well as for correspondence uses. Their new sealed circular, a note and envelope combined, to be sealed when sent through the mail, is evidently appreciated by the advertising public, as they report large sales of them.

The Acme Stationery and Paper Company proposes to improve the appearance of its "Perfect" pencil tablets by a new cover. The present plain cover of the tablet is to be abolished and a cover made of antique paper in old-gold, chocolate, terra-cotta and slate colors, will be substituted. The design and lettering, too, are to be changed for a more striking and elaborate engraving. These tablets come in three sizes, large, medium and small, and they have proved so popular with the trade that 2,000,000 of them have been sold since their introduction.

Charles J. Cohen, Philadelphia, has just received an invoice of mahogany and ebony pedestals and artistic tables. These are of various prices; some are very elaborately carved and ornamented, while others are plain yet very attractive. They are shown with rich bronze urns and figures, as also the new designs in bronze lamps, which are attracting so much attention this season. Altogether they add greatly to the already very elegant display made this season by the house.

Hard & Parsons have made a decided hit in the introduction of their "New York Linen" society writing-papers. These papers are made of pure linen stock, and besides being very heavy, are very rich and "toney" in appearance. The trade have got tired of tinted writing-papers, the demand being mostly for plain goods of a substantial quality and peculiar finish, showing strongly the fibre of the paper and purity of the stock.

M. J. Anderson has just brought out a new line of pocket and office calendars for the coming season of 1884. They come in various styles—card, book, folding, &c., and are finely embellished with fresh designs of lithographic engravings. Intending purchasers should not fail to see them.

Notwithstanding the approaching cold season, the Fountain Ink Company reports a lively trade in Caw's inks, which are bound to recommend themselves wherever introduced. F. C. Brown, the firm's representative, has just returned from a very successful business trip East.

C. E. Stevens and E. L. Manchester have formed a copartnership for carrying on the stationery business at Boston under the style of Stevens & Manchester, succeeding I. W. Moody.

Sibell & Hyer, stationers, New York, have dissolved partnership. F. Sibell will continue the business, under the style of F. Sibell & Co.

The publishing firm of Woy & Flory, Longmont, Col., has dissolved. A new firm has been formed under the style of Woy & Beckwith.

York & Morrison, publishers, Red Mountain, Col., have dissolved partnership. The business is continued by R. Morrison, Jr.

B. F. Beelman, of the firm of B. F. Beelman & Brother, manufacturers of brackets, &c., Cleveland, Ohio, is dead.

J. M. Head, publisher, Sparta, La., is dead.

J. W. Webb, publisher of the *Record*, Lompoc, Cal., has sold out.

W. N. King, printer and publisher, Piqua, Ohio, has been attached.

S. M. Hunt, Jr., paper-stock dealer, Springfield, Mass., has suspended.

Louis F. Brunner, stationer, &c., San Francisco, Cal., died a few days ago.

J. E. Sherrill, publisher, Danville, Ind., has admitted W. T. Henry into partnership.

N. G. Davidson, publisher of the *Record*, Alma, Mich., has sold out to K. W. Ely.

W. T. Dillon and J. W. Wallace have bought out the *Herald* Printing Co., Leadville, Col.

G. A. Hawley has bought out Marion E. Sheldon, bookseller and stationer, El Dorado, Kan.

The style of the firm of Ferris & Alston, printers, Columbus, Mich., has been changed to Ferris & Maer.

An attachment has been issued against Prevost & Brazzancovich, dealers in picture frames, &c., San Francisco, Cal.

Nagle & Co., manufacturers of blank-books, Philadelphia, Pa., have been damaged by fire and water to the extent of \$4,000. Insured.

The Berlin & Jones Envelope Company is preparing to make a fine holiday display of its large and varied line of papeteries and plush goods. The large show-window of the firm heretofore occupied by the envelope machine, has been emptied, and is to be filled with a hundred or more different designs of the firm's goods, arranged in such a manner as to make a very rich display. The trade will do well to see it.

The Kerner stylographic pen has recently been somewhat improved. By a new composition of the flexible tube this is prevented from expanding by the action of the ink or atmosphere. In the manufacture of the pen, moreover, there is now used a new method for smoothing the writing-point of the needle. This is rounded off with the iridium point giving a more perfect and uniform stylus than before. Other improvements will be made whenever necessary.

The November number of *The Journalist*, which has just come to hand, is replete with matter of unusual interest to members of the journalistic profession. The chief feature of the number is a lengthy article on the New York *Herald*, with portraits of Bennett, senior and junior, and other noted journalists who have been identified with it. There is also a great deal of fresh, crisp gossip of newspaper men and others, an article on "Dramatic Criticism" and other matter of a very readable nature.

T. W. & C. B. Sheridan, manufacturers of bookbinders' machinery, have recently been getting up a handsome advertising device in the shape of a framed picture, with the firm's card and representations of the various bookbinding machines made by it. The sign is about two by three feet square. A triangular-shaped space, one point of the triangle touching the lower border of the sign, occupies the central part. It is covered with a design of leaves and flowers, which surround engravings of Sheridan's "Auto," the "Inker and Embossing Press," the "Sheridan Gem Paper Cutter" and the "Book Trimmer," printed on a small white background. The oblique angular space formed on either side of the triangle is bright red, giving to the whole a striking, yet pleasing and harmonious contrast. A handsome border and frame surrounds the picture, which is under

glass, thus making the sign an appropriate ornament for the wall of an office or factory.

Charles Hamilton, printer, Worcester, Mass., has been damaged by fire.

Edward E. Leake, publisher of the *Tribune*, Dixon, Cal., has been burned out.

The December number of "Our Little Ones" has come to hand, unusually full of bright pictures and reading for the children. It is a very pleasing number.

A new writing-tablet is in the market, and it is certainly one of the best things in its line yet produced. The right to manufacture it is offered to parties wishing to purchase. This offer is advertised in another column.

John J. Grauer, St. Louis, has taken Herman Almstedt into partnership, under the style of Graur & Almstedt, and the new firm will continue the business in chromo cards, shape novelties and commercial, at 918 Olive street, in that city.

The Richmond Paper Manufacturing Company has succeeded in producing a beautiful pink color in the manufacture of its "Climax" blotting. This result has been achieved by dint of patient experiment and delicate workmanship, and shows a success not hitherto attained in the manufacture of pink blotting. The company is now putting up "Climax" in a new all-rope wrapper, and has just issued a twenty-paged circular setting forth the claims of its blotting, with fac simile reproductions of testimonials to its character.

Rev. William Mitchell, a newly installed pastor of the Westboro (Mass.) Congregational Church, was arrested in Boston on Saturday last for stealing at book-stores. It is said "he was first noticed at the store of Lockwood, Brooks & Co., where he purchased a cheap book and purloined a more valuable one. He then went to Clark & Carruther's store, and that firm, having been warned by a clerk from Lockwood's store, watched him play the same game, and when about to leave he was arrested. He offered, it is stated, \$1,000 to have the matter kept quiet."

French & Choate are doing a brisk business in their specialties. The blackboard erasers made by this firm have taken so well with the trade that the firm will enter much more largely in their manufacture next season. One of the most popular articles in stationery is Beach's writing tablet, which is manufactured by French & Choate. The tablet consists of a finely polished black-walnut board, 12½ and 16 inches in size and ¾ of an inch in thickness. This is provided with a spring clip (to hold and carry the paper) moving freely in a groove on the left side, and adjustable clasps holding a piece of heavy blotting-paper on the right edge of the board. The use of this tablet is obvious, and to one who has much writing to do it soon becomes a necessity. By its use the paper is held just where it is wanted and a uniform arm-rest is furnished.

The following named out-of-town tradesmen were in town during the past week: R. T. Moir, Schenectady, N. Y.; A. T. Miller, Hudson, N. Y.; C. A. Sheffer, Wellsville, N. Y.; Mr. Maxwell, of Maxwell & Co., Louisville, Ky.; Thomas Groove, of Thomas Groove & Co., Boston, Mass.; Mr. Auld, of the Burlington Press Association, stationers, &c., Burlington, Vt.; Mr. Stirling, of Stirling & Mosher, Watertown, N. Y.; R. G. Wyncoop, Syracuse, N. Y.; Mr. Morse, of Preswick, Morse & Co., Elmira, N. Y.; Charles Gessel, Dubuque, Ia.; Samuel Hobbs, Boston, Mass.; William B. Rogers, of Rogers & Tuley, Louisville, Ky.

J. E. Linde seems to be indefatigable in getting out shape goods. He has just issued "Knight in Armor," "Washington Crossing the Delaware," "Rocking Horse," and several others. His list has been revised and corrected, and the trade should send for new list, all other lists being revoked.

Harrison Brothers, publishers, Table Rock, Neb., have sold out.

Samuel O. Dunbar, manufacturer of ink, Taunton, Mass., is dead.

William J. Wilson, bookbinder, Boston, Mass., will settle up his business in insolvency.

A. H. Smythe, Columbus, Ohio, has issued an illustrated descriptive catalogue of artists' materials and art novelties. It is a very full and complete list, and deserves attention.

George W. Cross, lately in the blank-book business at Saugerties, N. Y., is now making his headquarters in New York, and can be found at the Grand Union Hotel by appointment. He will give due notice of his future movements.

The illustrated Christmas number of the *Publishers' Weekly* is out, and it is, as usual, a Christmas present of itself. It contains 176 pages, inclosed within the usual decorated cover, and is full of illustration and interest.

COLORED PHOTOGRAPHS ON GLASS

The exceedingly delicate colored photographs on glass, says an engineering paper, which have come into fashion somewhat of late, are produced by fixing a paper photograph upon a cushion-shaped glass with transparent cement, and when it is dry rubbing away two-thirds of the thickness of the photograph with sand-paper. The thin film left is then rendered transparent by soaking in melted paraffin-wax, after which transparent colors are applied, which appear softened down when looked at from the front. The background and heavier portions of the picture are then painted in body-color upon the face of another cushion-shaped piece of glass, which is afterward fixed behind the first one. An improvement in this process has just been made by Mrs. Nelson Decker, daughter of the late C. F. Varley, F.R.S., and the first of the young members of his family to have produced a scientific novelty. She has just discovered that the second sheet of glass may be abolished, a better artistic effect produced and the picture rendered more permanent by being protected from the action of the air and deleterious gases by being wholly embedded in paraffin. She does this by quickly dipping the photograph in paraffin a second time after the transparent colors have been applied, and painting the heavier colors upon the back of this second coat. A third layer of paraffin is then applied, and the background painted upon that; this third coat may be finally protected by yet another layer of paraffin. Some practice is necessary to acquire the "knack" of doing this efficiently. It must be done quickly enough not to re-melt previous layers, and the plate must, after each dipping, be quickly tilted on end in such a manner that the paraffin does not run into ridges and thickened lines, but forms an even coating.—*Pottery Gazette.*

WORN-OUT STEEL PENS.

The Germans are remarkable for practical economy. Hitherto they have accomplished great things by collecting cigar-tips, and disposing of them for the benefit of poor children. Now comes a suggestion from the Saxon Industrial Society concerning the collecting of cast-off steel pens, to be disposed of for the benefit of workmen's children by procuring them in-struction of various kinds. Steel pens are, as we all know, made of the best of steel, which suffers little by use. Instead of throwing away old pens, these might be preserved and gathered, and many millions of marks saved by converting them into watch-springs, fine knives, &c. Steel filings are carefully saved; why not steel pens, which represent a much greater value? If for nothing else, they might be profitably used in the manufacture of ink.

The *Arte della Stampa* states that a large deposit of lithographic stones has been found near Monte Subiaco, province of Umbria, Italy. The great scarcity and the rise in price of the Solenhofen material caused the Italian Government some time ago to "prospect" for similar stones in their country, and the result has been the above discovery. No reports as to the quality of the stones are to hand, but a company has already been formed to work the quarries. The price in Italy will be about half that of the Solenhofen stone.

Happiness is not confined to any sphere of life.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, NOVEMBER 29, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE STATIONER has directed attention to the trade advantages likely to follow upon closer intercourse with Mexico. These benefits will doubtless be mutual, and, lest they should be too long delayed, it is desirable that the pending commercial treaty with the adjacent republic shall be ratified as speedily as possible. When this ratification is made, and with an all-through rail connection from the extreme north of the United States to the interior of Mexico, it will be strange if our exports to the sister republic do not double within the next two years. Of course this is largely dependent upon the enterprise of our merchants and manufacturers, who must do their share in promoting commerce and help to show that the labors of our capitalists and legislators have not been vainly directed. If the path for our mercantile and industrial classes is thus made easy, we hope that it will not be unsought or neglected. We presume that those who are so much concerned in the advantages suggested, will be alive to them, but it is better to anticipate and prepare to realize the benefits that may accrue than to wait and lose the first chance for securing them. Much has been said and written about the necessity of increasing our trade, since the International Exhibition of 1876, whose effects have been sufficiently pronounced to warrant us in recalling them. It will be strange if in the light of that experience the press shall be compelled to constantly urge and push merchants and manufacturers in a direction so plain that it can scarcely escape the attention of those who are least concerned in following it.

GREAT interest is seemingly taken in a national bankrupt law, but, withal, this interest is not exerted in the most effective manner. There was a meeting of bank presidents the other day in Boston, at which it was resolved that the law is a necessity, and an approval of the Lowell bill was expressed. All this is very good, so far as it goes, but it does not reach very far. Something more than formal expression of opinion is necessary, and if bank presidents or other business men want to secure an effective law they must talk less and do more—in fact, turn in and work to secure its passage. The urgency of such an enactment has had practical illustration in more than one instance of late. Chicago merchants dealing with Dakota firms have been discussing the exemption laws of Dakota, which are said to be particularly favorable to fraudulent debtors. The Chicago *Tribune* says: "Several cases have occurred recently in which Chicago merchants have suffered heavily, while the parties owing them have retired with a liberal holding, no small part of which was open to the suspicion of having been secured by using the money of the Chicago creditor. Also, the fashion set in this city of selling out under difficulties seems to have found considerable favor farther West. One case was reported yesterday in which a 'merchant'

sold out the next day after receiving a consignment of about \$8,000 worth of goods from a house in this city, the quantity being at least double that of any of his previous purchases, and the party who bought him out had given a semi-indorsement to the merchant here. Yet the latter by no means feels sure that he can recover." Such complaints can be avoided if we have an efficient law. There can be no confidence in trade if suspicion constantly underlies business transactions, and we know that merchants realize it; but, realizing it, fail to do what they ought to apply the remedy. If you want a bankrupt law, take measures to agitate it and press its passage. Work must be done with coats off.

ROUNDABOUTS.

BY THE TRADE LOUNGER.

I believe that I had something to remark about Evacuation Day, didn't I? Yes! I haven't so much to say now. I was there. I did my little piece of the ceremony, and it was damp, not to say uncomfortable work.

But we were all there! Were we not? The crowd was immense! Everybody knows what it was, and so there's no use of saying anything more about it. As a final relief to my feelings I merely want to say it was a "big thing!"

The event was useful as well as otherwise interesting. A great many people came to town and they didn't go away directly, but stayed over and looked around, bought some things and made trade quite lively. In going around I have heard of a number of stationers being in town, who had held off to make their purchases and take in the show. This is as it should be, making people happy on both sides.

New things keep coming out. Seems as if the season doesn't make much difference. I have seen some new designs in celluloid paper-knives which are certainly very pretty. These are made in various colors with beautifully devised handles. They are also ornamented in gold. I don't see them advertised anywhere, and I wonder, therefore, how the makers expect to sell them.

Window shows are good things, if properly managed. One way in which the dry-goods dealer in stationery gets trade away from the "legitimate" is by making up a gorgeous window. Macy, for instance, has got a "show" that is sure to draw a crowd. The dolls which form part of the exhibit are splendid. The scene, as I recall it from a hurried glance, is a circus and menagerie in which the animals go around a ring and the dolls, representing the audience and attendants, are perfectly got up. Now, if stationers and toy dealers would devise similar novel attractions, they would draw crowds and customers.

One firm is making something of a window display in the papeterie line. It is the house which has been in the habit of ornamenting one of its windows with a young lady and an envelope machine. Of course, any greater attraction than the young lady could not be of-

ferred; but then she is bespoken, and so the new display will serve to mitigate disappointment.

The Philistines who war upon the trade have been reinforced by a prominent grocery house, the heads of which inscribe "anti-monopoly" on their banners. I have an advertisement before me in which, in combination with sugar and molasses, pickles and vinegar, soap and soda, jellies and sardines, one can buy an "assorted case" of toys. The list of toys includes dolls, tops, "elephants" and other animals, including mules, mechanical locomotives, &c., &c. I presume that this firm is thus trying to practise what it preaches and doesn't want the stationery trade to monopolize anything. I expect that it will next strike into the book trade. Now, we may expect to hear a howl from the wholesale stationery trade, for here is where this innovation cuts this time. I shall expect to see the thing much worse in another season.

I haven't seen many Xmas cards yet. I presume that there are numerous new designs, but I haven't really had time to go and see them. A Duane street house has some nice things in this line, chaste and well-suggested.

Still they come! New forms in shape goods. Of course, there is room for an unending round of new things in this line, but, for all that, I can't but wonder when the end will come. These productions are not inferior to those which have gone before; they are, if anything, better.

I would like to know what that big smoke-pipe means sticking up in the rear of that blank-book factory on Reade street. I have heard it insinuated that it contains a spiral stair-case, up which a prominent member of the trade expects to take daily exercise, and on reaching the top thence to survey the paper and stationery dominion o'er. The smoke-pipe extends very high into the air above the tops of the adjacent seven or eight story buildings. The person who undertakes to surmount it must be bent on having a "high old time."

ANSWERS TO CORRESPONDENTS.

H. L. S. wants to know who make "Cahinet" ink-stands illustrated in THE STATIONER of November 22.

Ans.—We have advised the manufacturers to send you price lists.

OBITUARY.

EDMUND HARRISON.

Edmund Harrison, salesman and traveler for J. B. Lippincott & Co., died suddenly on the morning of the 15th inst., at his home in Philadelphia. He was born near Petersburg, Va., October, 1844. While completing his education at the University of Virginia, he, with all the members of his class, entered the army at the breaking out of the Civil War. He served in Pickett's Division during the whole war, and was among those who surrendered with Lee at Appomattox Court House. After the war he entered the bookstore of Wilkins & Barbour, of Petersburg, and remained with them until the early part of the year 1863, when he went to Philadelphia and accepted the position which he filled at the time of his death.

Mr. Harrison was well known and highly respected by the trade in the South and West, where he was accustomed to travel, and his genial and gentlemanly manner brought him a

host of friends at home and among the trade wherever he went. He leaves a wife and one child.—*Publishers' Weekly*

EBONY.

Ceylon ebony, so much used for veneering and in the making of various articles, is regarded the best, because excelling in uniformity and intensity of color. It grows in great abundance in some of the flat parts of Ceylon, the trees being so large that many heart-wood logs are obtained that are two feet in diameter, the length usually running from 10 to 15 feet. There is a good quality of ebony in Coromandel, and there are several Indian species of excellence. Certain species found in India and Ceylon, such as calamander wood and cadooberia, are highly valued for their beauties of grain, being of different color from the distinctive ebony, the prevailing black of the wood being striped with a rich yellowish brown. In density and durability it is far inferior to ebony, which is universally notable for its hardness, heaviness and deep black color. The heart-wood designated as ebony is obtained from various trees, and belongs to the same genus which produces the date-plum and other fruits. Ebony of very good quality is obtained from a tree growing in Mauritius and Madagascar. Ebony, supposably obtained from India or Madagascar, was frequently used by the ancient Greeks and Romans, principally for inlaying with ivory, to produce a striking con-

trast of color. In the Scriptures it is mentioned by Ezekiel as an article of Tyrian commerce. It has a rather pungent taste and possesses certain medicinal properties, having been at one time used as a laxative and sudorific. The name ebony is sometimes applied to the dark woods of trees very different from those of the genus *diospyros*, to which ebony really belongs. An Abyssinian tree called muzzungba, for instance, produces a heavy and black wood much resembling ebony. West Indian or American ebony is of a greenish brown color rather than a black, is very hard and durable, takes a good polish, and is much sought after by makers of musical instruments. It is extensively imported from the West Indies to Great Britain. The tree, however, is of a small size, seldom more than twelve feet high, with a trunk that is only a few inches in diameter.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, November 28, 1883.

THE MONEY MARKET.—No change can be reported in the loan market, which continues easy and plentifully supplied with funds. Call loans on stock collateral were 2@2½ per cent. The stock market continues lifeless, what little business there is in railway and miscellaneous shares being almost wholly confined to the room traders. Prices remain quite steady, the gains of one day being generally lost the next, or *vice versa*. There is a continued good demand for the better class of railway bonds, and even in the purely speculative kinds there seems to be a strong tendency to higher prices. Government bonds continue strong and moderately active. Foreign exchange is unchanged and dull.

THE PAPER MARKET.—The observance of Monday as a holiday, and Thanksgiving Day occurring to-morrow, have been causes which have circumscribed city trade within narrow limits during the past week. While our city dealers have felt this interruption to business, manufacturers generally experience no falling off in the number of orders for goods to be made up. The apprehension felt early in the fall that if the mills were allowed to run to their full capacity to the end of the year, without any further hindrance, prices would further decline, has been dissipated to some extent. Although there is another month remaining before the year closes, the chances are that the winter freeze-up will occur before then, which will keep out of the market a considerable quantity of goods and tend to strengthen prices. There has been no decline in prices since the drought was broken, but, on the contrary, manillas are selling at an advance, and other grades have held their own. The condition of the manufacturers in the East must be better than at the West at the present time, judging from the closing down of a number of the Western straw-wrapping mills for a period of two months. Although the straw wrapping branch in the East is far from being in a flourishing condition, the surplus of goods on the market is comparatively moderate.

THE STATIONERY MARKET.—Trade has been more lively this week. The imposing ceremonies on Evacuation Day brought many buyers to town from various parts of the country, who on account of that occasion had deferred coming to the city sooner, in order to combine business with pleasure. Dealers anticipated this some weeks ago, and hence were fully prepared for it; and in a business point of view their expectations were fully realized, more orders being taken in one day than are ordinarily taken in two. Sales, however, were small, but in such numbers as to impart to trade a very perceptible briskness. The trade in staple goods is very fair and an improvement is looked for after Thanksgiving. Orders have somewhat fallen off in fine stationery, but prices remain firm. Notwithstanding the approaching cold season, inks are commanding a very satisfactory trade, the shipments to near-by points being numerous and large. There is a decline in orders for steel pens, but the trade in gold pens is very active. The envelope trade is hardly as good as usual and little is doing in it.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platinum alloyed with Iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

CINCINNATI GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, November 27, 1883.

Christmas is coming again. How very punctual! What if debtors were like Christmas in this matter! We should not need much money in such an event. Only a little would be needed now and then to square up accounts. But, you know, Christmas has had nothing else to do since he was born but to be punctual. In fact, he could hardly help himself with three hundred and sixty-five days in the procession pushing him along. Then there is the force of habit for now nearly two thousand years. And how his dawn is welcomed! Wonder what sort of cards they had on the first Christmas. That was before Prang commenced to print. That was at a time in the world's history when a sort of inquest was held over a new-born babe to see whether or not it was to live or to be food for fishes. That was before there were asylums for the blind, the aged, the poor. That was when women were held in contempt, so to speak. It was before an age of chivalry was possible. After the first Christmas, in long procession, followed a great multitude of things new to the world, every one of them warm, bright and beaming with love to man. To this day, the world seems unable to get over that first Christmas. It has been a day of joy to millions for now nearly two thousand times. To art it has proved an unceasing inspiration—art for the pleasure of childhood that was so little respected in the infancy of the world—that is so cruelly neglected now in parts of the world where Christmas is not yet known.

"Christmas cards will not be the thing this year," said society early in the season. "No such thing. We shall have our Christmas cards if they will only give us fresh, true, noble ones," answered the great common-sense public, who don't care a fig for the petty code which that vain, fickle little clique that arrogates to itself the title "society" may choose to make on this or any other subject. The fact is, we are going to have Christmas cards. We have had them already—we have them still and we shall have more of them. Here in Cincinnati the sales commenced a full month earlier than they did last year, and they have kept up. Houses have been compelled to duplicate their orders. One house in Cincinnati that only five or six years ago sold in one season only ten dollars' worth of these cards, last year sold over two thousand dollars' worth, and this year will realize nearly a thousand dollars from the sale of them. That is only one house, mind you! There, now, Society, what have you to say on the subject?

General trade is dull, but then the weather has been unseasonable. In fact, it has been summer-like. The stationers are doing well on Christmas goods, and booksellers are likely to realize handsomely. Jewelers complain that the demand for diamonds and jewelry is next to nil for Christmas, and books always go well when that is the case. Besides, you know, Cincinnati is an intellectual sort of place, and that makes it run to books. It gives tone to book-buying, you know, and makes it the style to buy books rather than jewelry.

By the way, we are going to have a ten-story printing house here. Van Antwerp, Bragg & Co. are going to enlarge their building, and not stop till they put ten stories on their present immense structure. They have just ordered half a dozen best stop-cylinder presses for the best kind of work. Here let me tell you a secret. Don't tell anybody, for the world! Here it is. Don't miss it. They are (look out,

now)—they are actually going to quit making blank-books and the like, and are going hereafter to stick wholly and devotedly to making books that have nothing blank about them—books that talk to the young millions and shape the hearts and minds of the artificers of the future American republic; books that are to inspire the defenders of the flags in the hereafter of this nation, and all which that means. It is a grave responsibility, but someone must undertake it.

In a short time the Strobbridge Lithographing Co. is likely to be paying \$500 salary weekly to two artists. Matt Morgan's contract at \$200 per week has just expired. They are not likely to let him go, and they have just got the best man money could buy to come from the old world here to work for them. Look out for new lines of business when that firm gets under headway in its new house.

Russell, Morgan & Co. are doing wonders in their immense building on Lock street. You will hear more of them shortly.

John Holland's business during the year, closing with this autumn, is very much greater than that of the previous year, closing at the corresponding time. The increase of his trade in staple goods—that is, in gold pens—is something marvelous. He has just got out "a propel and expel pencil, No. 625," which pushes out and draws in the lead with equal facility.

W. B. Carpenter & Co. have just shipped to California an installment of envelopes made to order.

Snider & Hoole have been filling government orders to Washington for straw-board. By the way, this firm has been filling orders recently to Augusta and Savannah, Ga. With characteristic enterprise, it is taking an interest now in artificial leather for bookbinding, and at present is casting about for a vehicle and process for making this artificial leather take impressions in gilding. This firm is considering several other novelties.

Manufacturing stationers are moderately busy but not overwhelmed.

Here I must say something about the Globe Files Company. Over a year ago I told you about the birth of their music file, a thing of beauty. You devoted a paragraph last week to a description of it. I am no prophet if it does not improve on that in the way of making it more beautiful before another year rolls round—improve upon it in a way that will amaze you. It is none of your sleepy concerns, that company isn't; so keep looking out for something new from it every once in a while.

Traveling men have been skipping in and out of Cincinnati at a pretty lively rate. Here is a list, some of whom have not skipped out yet. From New York: J. B. Gunn, of E. Faber; Geo. Freeman, of American Pencil Company; Mr. Hyman, of Eagle Pencil Company; D. J. Saarbach, of Chas. T. Bainbridge's Sons; W. Filmes, of Friedman & Lauterjung; N. C. Reville, of J. G. Shaw Blank Book Company; Jas. T. Watkins, of American Lead Pencil Company; T. Aikenhead, of John Gibson; Mr. Stern, of C. E. Bridgman. From outside of New York were: W. A. Taylor, of Byron Weston, Dalton, Mass.; C. C. Hall, Syracuse, N. Y.; Mr. Barden, of Crane Brothers, Westfield, Mass.; Arthur D. Geannini, of Craighead & King Manufacturing Company, Ballardvale, Mass.; R. C. Chapin, of Judd Paper Company, Holyoke, Mass.; Daniel Alexander, of Smith Paper Company, Lee, Mass.; T. S. Buck, of Lambertville Paper Company, N. J.; G. W. Willey, of Burd & Little, St. Louis.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

SHELF BOXES.

Anything intended to save time and add to the convenience, particularly of the business man, will always command attention from consumers, and, as a natural result, from the trade, which seeks to supply the commodity. One of the latest devices calculated to save the time and labor of the business man is the shelf box. The utility of this box is apparent at the first glance. A thorough test of its merits has already gained for it the confidence and patronage of a very large class of consumers.

The accompanying engraving shows the design of a series of new shelf boxes intended for the use of stationers. The boxes are made to contain, more particularly, writing paper of various sizes, octavo, commercial note, pocket note, letter, long bill, foolscap, extra size cap, &c. Each box is made of extra quality tar board, neatly covered with dark, glazed paper and is strong and durable. As will be seen by the engraving, the end-piece opens and closes, being held in position when closed by a triangular-shaped lid, which fits over it closely, and yet is easily lifted when it is desired to get at the contents. A ring or handle on the front part of the box enables it to be pulled from the shelf quickly and with the greatest convenience. The box is dust-proof, and, altogether, is an article which must command attention from the trade.

ON MARKING BOOKS.

The true book-lover is not always best adapted to getting from books the best service. His very fondness for his library often makes him treat it with a certain deference and consideration which interferes with its usefulness; while some rough book tyrant, who rides rough-shod over his volumes, will wring from them an amount of help and support of which the bibliographer has neither experience nor conception. The man, for instance, who really respects his books, treating them as friends if not as superiors, would regard as nothing less than sacrilege the means by which certain tough-skinned readers help themselves to the ends they desire. It would be as impossible for him to dog-ear the leaves, pencil the margins, break the backs or make a scrap-book of the blank pages, as to "peep and botanize upon his mother's grave." He could no more deflower with foul marks the fair white pages of the volume whose guest he became, as it were, by being allowed to peruse it, than he could bring dishonor upon the house of his human entertainer, whose salt he had eaten and whose wine he had drunk. The reader who scores the passages which attract his attention is to him a Goth, a Vandal, or whatever outer barbarian may be even worse than these redoubtable destroyers. He sees with a shudder such an one take up a volume, and has for every book in the destroyer's library the same profound pity which the captive man and brother excited in the sensitive soul of the ardent abolitionist.

Without examining the matter from so ex-

treme a standpoint, we still seem to find good and sufficient reason why the marking of books is a needless and senseless one. Allowing that a book is made for use, and that the student must consider himself before he does his books, it may still be granted that, other things being equal, a method of use which defaces the book is not so desirable as one which does not; and for a dozen obvious reasons if one wishes to make usable references to the books he reads, nothing is so practical, so tidy and so simple as a system of slips arranged like a card index. The student is very little better off for having pencil marks against passages which have pleased him at first reading; he has simply indulged a childish desire to express his gratification, and might

Genuine bookmen, to quote John Hill Burton, "like printers, have a sort of instinct, sharpened by training and practice, the power and acuteness of which astonish the unlearned;" they read with their fingers, getting more from simply turning over the pages of a tome than the ordinary reader could gain by the most laborious study. The wise student will not allow himself to depend upon his pencil, but will cultivate this scholarly instinct; what is worth finding in a volume, he will discover by its means without extraneous aid.—*Boston Courier.*

WORKING AND POLISHING IVORY.

As a material to be worked by the mechanic, ivory stands midway between wood and brass, and is turned and cut by tools having more obtuse angles than those employed for wood, and yet sharper than those used for brass. It may be driven at a fair speed in the lathe, and is easily sawed by any saw having fine teeth. The tools used for cutting and turning ivory should have their edges very finely finished on an oilstone, so that they may cut smoothly and cleanly. Turned works with plain surfaces may in general be left so smooth from the tool as to require but very little polishing, a point always aimed at with superior workmen by employment of sharp tools. In the polishing of turned works very fine glass paper or emery paper is first used, and it is rendered still finer and smoother by rubbing two pieces together face to face; secondly, whitening and water as thick as cream is then applied on wash leather, linen or cotton rag, which should be thin, that the fingers may the more readily feel and avoid the keen fillets and edges of the ivory work, that would be rounded by excessive polishing; thirdly, the work is washed with clean water, applied by the same or another rag; fourthly, it is rubbed with a clean, dry cloth until all the moisture is absorbed, and,

lastly, a very minute quantity of oil or tallow is put on the rag to give a gloss. Scarcely any of the oil remains behind, and the apprehension of its being absorbed by the ivory and disposing it to turn yellow may be discarded.

Putty powder is sometimes used for polishing ivory work, but it is more expensive and scarcely better suited than whitening, which is sufficiently hard for the purpose. The polishing of irregular surfaces is generally done with a moderately hard nail-brush, supplied with whitening and water, and lightly applied in all directions, to penetrate every interstice; after a period the work is brushed with plain water and a clean brush, to remove every vestige of the whitening. The ivory is dried by wiping and pressing it with a clean linen or cotton rag, and is afterward allowed to dry in the air, or at a good distance from the fire; when dry a gloss is given with a clean brush, on which a minute drop of oil is first applied. It is better to do too little polishing at first, so as to need a repetition of the process, rather than by injudicious activity to round and obliterate all the delicate points and edges of the work, upon the preservation of which its beauty mainly depends.

SHELF BOXES.

as well clap his hands or stamp his foot as to dab a black scratch down the clean margin of the page before him. Of the hundred people who mark books, it is safe to say that 95 per cent. have no purpose in the custom beyond such an outbreak of pleasure or dislike. We are not speaking now of the sentimental young ladies, whose underscorings are so much in the nature of a personal revelation that the novels they read are better fit to be burned as private diaries than for after circulation, but of really thoughtful and studious men; and of the 5 per cent. we have excluded, at least half never achieving any practical results by their annotations. They have a vague intention of sometime referring to a choice passage, but that is generally the end of it, especially as it is difficult to see how a pencil mark in some shut book standing among a shelf-full of others would help him find it if he remembers it when the occasion of use presents itself.

There is another point. The use of a crutch produces lameness. The man who treats his books rightly will be rewarded by the growth of a sixth sense in handling them. They will come half-way to meet his inquiring intelligence.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,497,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

OUR LEADING INKS are all bottled in them except French, Extra Copying and Carmine. We also use the same style with wide, trumpet mouth, in 4 oz., for Carter's Mucilage and Arabin, the latter a new product, from which all waste matter has been removed, so that every single particle will stick.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the foregoing, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Each sheet is water-marked with name and date.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 23. NEW YORK, DECEMBER 6, 1883. WHOLE NO. 441.

Correspondence.

BOSTON GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE OF THE LOCKWOOD PRESS,
49 Federal Street,
Boston, December 5, 1883.

December has come, and with it the long looked for holiday trade is beginning to open up. The novelties of the season are everywhere attractively displayed, and every indication points to a large volume of business for this month. Shop windows are taking on their holiday attire, and the daily journals are filled with the special announcements of the various tradespeople. Buyers are becoming more numerous, and the stores are crowded. Almost every one I meet upon the street or in the cars is carrying a bundle or two. I have begun to wonder from whence "my bundle" is coming. It will not do in a gala season like this for even a newspaper man to be seen entering his humble home every night empty handed. Methinks I'll bundle up a few copies of THE STATIONER and carry them; 'twill give an air of prosperity and opulence.

The stationer, the card dealer, the publisher and the fancy-goods people, are now smiling all over, for the harvests have been gathered, thanks and prayers have been given, and now the feasting season is coming on. The holiday trade has opened up a little later than common, but dealers don't look for any falling off in the season's trade; in fact, a larger amount of business is expected than last year, and heavy stocks are found everywhere from which to make selections.

Ward & Gay are well stocked up with everything in the stationery and card line, among which are many attractive novelties specially prepared for the holiday trade. This house has built up such a large trade in cards that Mr. Gray has been forced to devote his entire attention to this department. A visit to the firm's sample-room found displayed a collection of cards that can hardly be surpassed anywhere. Cards of every description, in endless variety of styles, plain, fringed, frosted and satin cards for Christmas and New Year greetings. A very choice lot of imported fringed cards put up in boxes of a hundred are being jobbed at five and ten dollars a hundred. Special bargains are also offered in the very best of cards. Samples of these cards, to which are attached prices, are very neatly arranged upon the walls of the room, giving a bird's-eye view of the stock, and enabling buyers to make quick selections. Upon tables in the centre of the room are found dis-

played large assortments of fringed, frosted and satin puffed cards. These frosted cards are quite unique, and, giving a sparkle to the various Christmas scenes presented, are suggestive of the winter season. A number of new calendars for 1884 are also displayed, one of which, the "Leap Year" calendar, is very unique and pretty. In compliment to the fair sex, this calendar is in the shape of a heart, upon which sports Cupid, with his mischievous darts. Instructions in his artful ways are poetically given for every day in the year. Any lady having this calendar cannot fail to make "a leap" during the year, unless she is to be "single bound." A very instructive one is the American calendar, compiled by Delia W. Lyman, and edited by Prof. Henry P. Johnson. For each day is given appropriate extracts from history, by learning which one may, during the year, become quite familiar with American history. These calendars will no doubt have a big run.

The Dennison Manufacturing Company is offering a new line of plush and leather goods of its own make. The designs are new, the best material is used, and the finish shows artistic workmanship. The line is quite varied. Ladies' plush cabinets for jewelry are meeting with extensive sales. A stock of English tissue paper in endless variety of colors, for decorating and for making paper flowers, is displayed, as is also a lot of Japanese napkins, which are having a run this season. Election stickers are in big stock, and the house is prepared to furnish them to every candidate in the county, irrespective of party principles.

"Those Dreadful Mouse Boys," published by Chas. H. Whiting, is being well received, and the trade are handling the book quite extensively. The entire edition will be soon worked off. Trade in general is very good with this house.

John A. Boyle, manager of the Boston School Supply Company, reports that a very large amount of business has been done during the year in general school furnishings by his establishment. Educational books of all kinds, maps, globes, charts and everything else needed in the school-room or college, can be supplied by this house. In the line of maps, this company is presenting a wall-map of the United States which can hardly be equaled for artistic work, splendid printing and beauty of color. These maps are printed from copper plates by the great London publishers, Philip & Sons. They are mounted on strong cloth, with rollers, and varnished. The school committee of this city, after carefully examining the various maps presented for public school use, decided upon

"Huges" series of maps as the best for school instruction. Other cities have followed Boston, and the demand for these maps is on the increase. Nothing like a good article, if it's only a "trade journal."

A. L. D.

CINCINNATI ITEMS.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, December 3, 1883.

Here comes Christmas. Old St. Nicholas, with his twinkling eyes and gray beard, comes all muffled in furs, brisk, bustling, cheery and heavy laden, but not weary. How are you, old friend? "May you live long and prosper." What is the good of such a wish? Isn't St. Nicholas immortal? Is his beard any grayer than it was last Christmas? Isn't his step as brisk and elastic; isn't his smile as bright as it was last year—nay, ten years, twenty years, fifty years, a hundred, two hundred years ago? The fact is, his load is bigger and his assortment is larger than ever before. Really, isn't it increasing every year? Heaven bless the old fellow!

He deserves heaven's blessing; for whose step the dearest angels on this earth listen so eagerly! But he isn't going to grow older or die or quit coming, or anything of the sort. On the contrary, he means to keep on sowing his crop of joy once a year while the world stands. We might as well make up our minds to that without more ado. So come on, Mr. Prang, with your Christmas cards. Go on, young artist, training your fingers, eyes, brain, and heart in unison, for old St. Nick will want the best you can get out of all the powers and opportunities which God has given you. Clear the way for St. Nicholas! he is almost here. You can't stop him. His habits are fixed and he is too old to change them, and all mankind is on his side.

St. Nicholas has already begun here to lay in his stores. He drops in every day at Robert Clarke & Co.'s, at Pounsford's, and Peter Thompson's, and—shall I go through the whole list? No, I won't do it. Yes, but I must mention the Globe Files Company. St. Nicholas has got into the habit of calling there. The music files take his eye, and the shiny, pretty cabinets. No one keeps abreast with the times in matters of taste more punctiliously than he. John Holland, too, gets regular calls from him; so does George Stevens. But, let us see. Will he find anything on Walnut street, south of Fourth? Yes, at Woodrow's he will linger awhile, and at the Dawson Manufacturing Company's he will revel. Charles Stewart & Co. will receive a brief call. At W. B. Carpenter & Co.'s he will peep into the window and pass on, and so he will at J. R.

Mills & Co.'s. At Louis Snider's Sons, at Ross & Robbins', and at Snider & Hoole's he will toss up his dumpy little nose and whisk by. But this thing must stop right here.

St. Nicholas deals with the mint—he never works in the mine. Chatfield & Woods, and Stewart & Co., and Louis Snider's Sons, and Ross & Robbins, and Snider & Hoole, and all such places furnish the material, the ore, so to speak, which the mint stamps into forms of beauty. If we go back farther we shall find ourselves beside the ragged, wrinkled, ugly old woman grubbing rags out of the garbage barrel or the street dump. When you see a pretty thing glorified by art adorning a drawing room, don't trace its pedigree too far back, if you don't want to find yourself amid unsightly surroundings.

This complex thing we call business, or trade, is in an awkward predicament here just now. It is so sensitive to all sorts of influences that it is very hard to predict what its to-morrow will be. Now, the weather is affecting it queerly. Trade here is, in a sort of way, benumbed, and people say the mild weather is the cause of this condition, and that it will require a cold spell to limber it up and make it active. Sometimes dry weather troubles it, and much wet weather is sure to disturb it greatly. Something has happened, or is happening, to keep trade in all branches here very quiet. Pork packers are not buying hogs much because the weather is not cold enough, and the money has not gone out from them to the farmers. The wheels of business move slowly. Still, everybody says there is a good time coming, and it's not far away. A great many workmen are out of employment, but in some lines of business this is the yearly dull season, when such things are to be expected. Workmen in the shoe factories are on half time, and in the carriage factories very small forces are employed. Only let the conditions for "movement" in trade appear and there will be a change.

One thing which is certain and at the same time cheering, is that consumption goes on at about the usual rate, and since production in many sorts of business has stopped or is going slow, it follows that there will be, as a necessary consequence, a corresponding briskness when the reaction—that is, "the good time coming"—gets here. In view of these considerations, nobody is downhearted. There are unmistakable signs that there will be a good Christmas trade, no matter what sort of weather we may have; but if the weather should turn cold now the Christmas trade will be "just splendid."

To-day there arrived the artists A. C. F. Rimonaczy and his son, Otto, both of London, and Robert Germon, of Berlin, who have been secured by the Strobbridge Lithographing Company, under a three years' contract. The company has just renewed a contract for five years with Matt Morgan. The salaries paid these four artists are simply enormous, but they are making immense business for the firm. Rimonaczy and his son are famous for portrait drawing in black and white. Germon is a master in figures, and Matt Morgan may be called a master in everything, and for endurance and speed he has not his match. With this equipment in brains and skill, the company will within a month go into its immense new building on Canal, near Elm street. This building was made large to enable it to avoid night-work, but orders have already so accumulated on it that it will be compelled to keep up two establishments and run day and night. It has established

offices and depots in New York and also in London, England. Its success is a shining example of what that daring enterprise which secures the best talent and the best facilities that money can buy will accomplish. PRINCE WILLIAM.

ROCHESTER BITS.

[CORRESPONDENCE OF THE STATIONER.]

ROCHESTER, N. Y., December 3, 1883.

I promised something for the "Holidays." They are approaching, and here I am. Preparations among the trade are active and business is good.

Allings & Cory have nearly completed their large paper warehouse on Exchange street, and will soon move into it. This is a model establishment.

Scranton, Wetmore & Co. have added a temporary "annex" adjoining their store on State street, and filled it with holiday goods and books.

Steele & Avery make a fine display, as usual, in their fine store.

O. D. Grosvenor, of the American Tract Society, is loaded up with appropriate religious books.

W. J. Wilcox has removed to 17 East Main street.

R. M. Myers & Co., paper dealers, have enlarged their facilities and handle their increasing business easier than before.

C. E. Morris, collector of the "Port of Genesee," is radiant with Christmas goods, as well as staple stock.

The Rochester Paper Company reports an undiminished production of print paper.

E. Danow & Co., with their new store at 103 East Main street, are making a better display than ever of holiday stock—Christmas cards, "golden florals" and fine books.

Clague, Wegman, Schlicht & Co. are crowding the manufacture of the Shannon file, as advertised in THE STATIONER.

Williamson & Higbie, in addition to law books, make a good showing of holiday stationery.

All of the four daily papers have reduced their price to two cents, giving plenty of reading at the lowest rates.

W. Mark, in addition to his German stock, has a general supply of stationery.

E. R. Andrews is printing the large editions of the Co-operative Law Publishing Company's works, keeping his presses busy.

E. Danow & Co. announce the Ontario County Directory, also the Monroe County Directory, with map. GENESEE.

SHEARS.

In one of our exchanges we find the following account of shears, both ancient and modern, from the facile pen of Call Smith. We commend it to the attention of our readers, notwithstanding the fact that tinner's shears or snips are not mentioned, and no attention is paid to the introduction of power shears, without the use of which many modern industries would be at a standstill:

Mythology represents Atropos, "the unalterable," eldest of the Fates, as armed with the "abhorred shears" for severing the threads of destiny. These were of the sheep variety, with the bowspring at the junction of the bladed handles, and this form prevailed in ancient times and also among the early Britons and Anglo-Saxons. The distinction of inventing shears was claimed by the Greeks, but they have been found in Egyptian tombs dating back to a pe-

riod ages before the Greeks commenced to invent anything—even fictions. These Egyptian shears are of bronze, with handles formed in the shape of the Sphinx, and differed none in principle from those now in use. Shears are also referred to in Genesis, and Delilah must have had a pair when Samson was shorn. The common form of shears, with looped handles for the fingers and thumb and pivoted on a rivet, are of later date, but even these date back beyond the fifth century, where they are mentioned by Isadore as in common use by barbers and tailors. They were also in use in this form in ancient Rome for shearing animals of all kinds.

About the only important improvements in shears which later days have developed lie in the curving outward of the blades in such a manner as to touch at only the riding and cutting points, thus giving a more effectual cut than when the blades were perfectly parallel, and in the better adjustment of the lengths of the handles with reference to the pivot, in order to obtain the proper leverages for the various cuttings. The riding point above referred to is usually in the form of a slight bevel immediately behind the pivot screw. Attempts have been made to substitute a spring pin for the riding point, so arranged as to bear upon the shank of the blade just behind the rivet, but this improvement is of very doubtful value, and has not met with much favor. Great progress has been made, however, in the manner of manufacturing shears, in the advantageous distribution of the metal in them, and in superiority of workmanship and finish. The cutting edges of shears for ordinary use have a bevel of about 40°, which is increased to 50° in garden shears, and even more than that in those for cutting metals, while in the finer grades of shears and scissors it is reduced to 30°. Tailors' shears until recently had only the blades made of steel, the handles being made of iron, and in early times only the edges of the blades were of steel. Steel out of which shears are made and known to commerce as "shear steel," is made by welding together several bars, which are then drawn out and heated, rolled and tilted until the quality is as desired, and in the better grades the bar is cut, fagoted, reheated and retitled, the operation being repeated several times. The steel is then drawn into bars of suitable size. After being cut into the proper length, the end of the handle or bow is, when the shears are made by hand, flattened, and a small round hole punched therein, which is gradually enlarged on the beak of the anvil to the proper size, and the rest of the blade formed by hammer, punch and swage.

Of late years, however, the bulk of the shear blades have been stamped out in blanks by machinery. The blades are then smoothed by filing and grinding, after which they are matched in pairs and made to properly conform to each other. They are then tempered, ground and riyeted together, after which they receive the finishing touches by being rubbed with oil and powdered emery, fine ground, glazed, polished, whetted and burnished. Shears are made in almost endless variety both in style and size, all of which are familiar to the reader and need no description here. They have been much neglected. The sword has been immortalized in verse and prose. The pen has been enthroned above the sword, and yet as the emblem of destiny the shears were, mythologically at least, mightier than either in olden days, though it is doubtless an undeserved slur upon modern journalism to give currency to the report that they are now the chief editorial assistant, and mightier than the pen.—*Metal Worker.*

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SUPERB VALENTINES FOR 1884.

PURE and chaste in sentiment, the combined work of our best American artistic and literary talent, our line of Valentines for 1884 cannot fail to receive the support of the most refined class of buyers.

We have been guided in their preparation by the success in former years, and by the expressed wants of the trade.

The following artists, among others, are represented:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS ROSINA EMMET,
MISS L. B. COMINS,
MISS ALICE W. ADAMS,

F. S. CHURCH,
HARRY BEARD,
C. Y. TURNER,
H. GIACOMELLI, of Paris.
F. SCHUYLER MATHEWS.

A varied assortment of Valentines by the above-named artists is offered in plain form, and single and double silk fringed.

ENVELOPES furnished with almost all our Valentines, without extra charge.

BACKS.—We again beg to call attention to the elegantly-designed backs, which are a special feature in our cards.

SATIN PRINTS.

Besides a number of FLORAL DESIGNS mounted in a variety of novel styles, special attention is called to our finest production in this line,

THE "LION IN LOVE" VALENTINE.

This is a rich satin print, on an elegant fancy plush mount. The design is after F. S. CHURCH'S important work of above name. The poetry is by J. V. CHENEY. The picture is of the greatest artistic merit, and, on its elegant mount, forms, what we think, one of the most unique, artistic and sumptuous St. Valentine Souvenirs ever offered to the public.

Retail Price, in a neat suitable box, \$10.00.

DESCRIPTIVE PRICE LISTS OF OUR VALENTINES ARE NOW READY.

Besides our Valentines, we call attention to our NEW BIRTHDAY CARDS, including SATIN ART PRINTS, NEW SCRIPTURE TEXT CARDS, NEW COPIES FOR PAINTING, &c.

Our line of EASTER CARDS and EASTER NOVELTIES will shortly be announced.

ENGLISH HAND-MADE PAPERS

ORIGINAL
EYNSFORD
MILLS,

F

WATER-MARK:

E

L

L

L

L

L

S

KENT,

ENGLAND.

These papers, made from the purest fibre, without any foreign admixture, each sheet separately formed by hand in a mold, couched by vertical pressure and slowly dried by air, possess a toughness, hardness and strength unapproachable by any machine-made papers. For Legal use, for Scrip or Bonds, and for all purposes demanding great durability, these hand-made papers are invaluable.

The heavier sorts are double sized, and they will bear repeated erasure and constant handling beyond all other makes, so that for Ledger and Account-Book purposes none can compare with them.

Proprietor : JOSEPH ARNOLD, Eynsford Mills, KENT, ENGLAND.

Trade Novelties.

[We will be glad to receive samples of all novelties issued in the trade, and will notice all such which possess merit free of charge. It is desirable to accompany descriptions with cuts whenever possible.]

NEW PATENTS.

No. 286,118. Plaque.—Horace Craighead, New York, N. Y.

In a plaque, the combination of a piece or shell of glass, a picture or design applied to the back, a backing of paint or like ornamental substance for the portion of the piece or shell of glass surrounding the picture or design, a covering of sheet metal extending over the picture or design and backing, and a frame surrounding the whole.

No. 286,143. Paper-Fastener.—George W. McGill, New York, N. Y.

A metallic T shaped fastener having a folding head provided with indentations to hold the blades of its double shank in close parallel contact with each other, in combination with a metal cap closed upon the folded head.

No. 286,152. Hymn and Music Book.—Robert d'Shiell Robertson, Columbia, Tenn.

The combination, with a succession of hymns and pieces of music bound independently of each other under one cover with a space between said hymns and pieces of music, of one or more buttons or hooks secured to the lid or lids and projecting inwardly therefrom.

No. 286,159. Blank for Checks and Other Negotiable Papers.—Clarence H. Uhler, Lebanon, Pa., assignor of one-half to J. Clement Uhler, New York, N. Y.

A check, draft, note or other negotiable instrument, having printed thereon the names of the correspondents of the bank through which said check or instrument is collectable.

No. 286,161. Type-Writing Machine.—A. H. P. Stuart Wortley, London, County of Middlesex, England.

No. 286,172. Stencil Plate.—Saml. T. Berry, Cleveland, Ohio.

No. 286,177. Spinning-Top.—Thomas Claery, Greenbush, N. Y.

No. 286,186. Muffled School-Slate.—George Gray, New York, N. Y.

No. 286,254. Bookbinding.—William I. Blackman, Columbus, Miss.

No. 286,262. Toy.—Elisha S. Chapelle, Pembroke, Me.

No. 284,237. Apparatus for Making Paper Felt, Wadding, or Lining.—Clark Fisher, Trenton, and Edward R. Soliday, Lambertville, N. J., assignors to the Union Mills Paper Manufacturing Company, New Hope, Pa.

No. 285,312. Carl-Holder.—Paul Ruffani, Dresden, Saxony, Germany.

No. 286,337. Printing Press.—William B. Shedd, New York, N. Y., assignor, by direct and mesoe assignments, of three-fourths to John Metz, Jersey City, N. J., and S. C. Forsaith & Co., Manchester, N. H.

No. 286,313. Method of and Means for Finishing Photographic Pictures.—Nathan L. Stone, Potsdam, N. Y.

No. 286,352. Ticket-Distributing Box.—Samuel B. Whitehead, San Francisco, Cal.

No. 286,363. Paper Box and Lid of Boxes.—Arthur G. Wilson, New York, N. Y.

No. 286,379. Toy.—Matthew C. Bogia, Philadelphia, Pa.

No. 2 6382. Ruling Machine.—Henri A. Brissard, Paris, France. Patented in France September 13, 1872, No. 96,574; in Belgium, September 11, 1872, No. 31,200; in Austria-Hungary December 26, 1872, and in England May 3, 1873, No. 1,755.

No. 286,345. Mechanical Puzzle.—Wm. J. Decker, New York, N. Y.

No. 286,402. Apparatus for Waxing Paper.—Jas. B. Duke, Durham, N. C.

No. 286,403. Method of Waxing Paper.—Jas. B. Duke, Durham, N. C.

No. 286,422. Picture-Mat Cutting Machine.—Edward L. Gaylord, Bridgeport, Conn.

No. 286,430. Price Tag.—Zachary T. Hall, Philadelphia, Pa.

No. 286,434. Imitation Stained Glass.—F. Benedict Herzog, New York, assignor to Eugene E. Oudin, same place.

No. 286,447. Photographic Camera.—Benjamin W. Kilburn, Littleton, N. H., assignor to the Scovill Manufacturing Company, Waterbury, Conn.

No. 286,455. Toy Pistol.—Henry S. Lockwood, South Norwalk, Conn., assignor to the Lockwood Manufacturing Company, same place.

No. 286,467. Twine-Cutter.—William Miller, Boston, Mass.

No. 286,469. Calipers and Dividers.—William H. Mitchell, Boston, Mass.

No. 286,496. Seal Press.—R. Hale Smith, Springfield, Mass.

No. 286,535. Machine for Breaking or Cutting Up Sheets of Celluloid and Other Compounds of Pyroxyline.—John Everding, Newark, N. J., assignor to the Celluloid Manufacturing Company, New York, N. Y.

No. 280,560. Autographic Registering Apparatus.—James C. Shoup, St. Louis, Mo., assignor of six-tenths to Joseph Franklin and George M. Wright, both of same place.

No. 286,570. Combined Bat and Ball.—Wilbert L. Sweeten, Camden, N. J.

No. 286,997. Sliding Bearer for Beds of Printing Presses.—Andrew Campbell, Brooklyn, assignor to John McLoughlin and Edmund McLoughlin, New York, N. Y.

No. 287,022. Calendar.—Henry S. Hack, Taunton, Mass.

No. 287,030. Portfolio.—Jabez W. King and Seth W. Goodwin, Toledo, Ohio.

No. 287,045. Depositor's Bank-Book.—Edmund T. Moulton, Providence, R. I.

An improved depositor's bank-book, constructed, primarily, in two parts, viz.: one part a suitable cover provided with a self-binder attachment, and with leaves for containing the entries by the bank of sums deposited, and the other part a body of detached leaves, intended to be temporarily in the custody of the bank, for containing the entries of sums withdrawn by the depositor, such detached leaves being of proper form and size and adapted to be ultimately assembled one by one within the cover, so that the two parts, when brought together, shall compose the complete book.

No. 287,060. Fountain Pen.—James H. Shields, Boston, Mass.

No. 287,032. Machine for Perforating Music Paper for Automatic Musical Instruments.—Roswell T. Smith, Nashua, N. H.

The combination in a perforating machine of a double rank of perforators, the members of one rank alternating with those of the other, a double series of selecting and operating devices having a like alternate arrangement, and two separate and independent stencils or patterns, each representing alternate lines of cuttings to be formed in the paper sheet.

No. 287,035. Toy Horse and Cart.—Francis W. Carpenter, Harri-on, N. Y.

No. 287,114. Bag or Satchel Lock.—Robert Flocke, Newark, N. J.

No. 287,123. Book-Clasp.—Alfred C. Hafely, New York, N. J.

No. 287,192. Calculating Machine.—Ira E. Tallman, Paterson, N. J.

No. 287,239. Automatic Cutting and Feeding Attachment for Printing Presses.—Chas. E. Clement, Nashua, N. H., assignor of two-fifths to Charles W. Hoyt, same place.

No. 287,251. Slate and Window Cleaner.—John B. Deeds and William Mack, Terre Haute, Ind.

No. 287,281. Calendar.—Henry Horatio Ham, Jr., Portsmouth, N. H.

A calendar composed of a face-card bearing the names of the months of the year, and figures designating the days in the shortest month of the year, and provided with parallel slots arranged, respectively, above and below the figures, a movable back card divided into equal spaces, each of which bears the characters designating the days of the week, and the numbers which, taken with those on the face-card, make the full number of days of each month, and a pointer or index directly connected with the rear card for moving the same and registering with the names of the months on the front card.

No. 287,290. Interest Indicator.—Homer E. Jenne, Ben Lomond, Cal.

No. 287,331. Mask for Base-Ball Catchers.—Alexander K. Schaap, Richmond, Va.

No. 287,352. Game Apparatus.—Thomas Henry Ward, Tipton, County of Stafford, England. Patented in England June 8, 1883, No. 2,870.

No. 287,381. Slate and Blackboard Eraser.—Milo E. Ingram, Alleghany, Pa., assignor of two-thirds to John A. Gilleland and Christian Steffen, Jr., both of same place.

No. 287,383. Printing Machine.—George W. Kendall and Charles Kruse, New York, N. Y.; said Kendall assignor to said Kruse.

No. 287,400. Pencil-Holder.—Lewis O. Hull, Fort Wayne, Ind.

TRADE-MARKS.

No. 10,650. Writing-Paper and Envelopes of all Kinds.—Z. Crane, Jr., & Brother, Dalton, Mass.

"The representation of a deer above a shield."

No. 10,654. Paper Boxes.—George W. Plumly & Son, Philadelphia, Pa.

"An annular figure representing a buckled belt."

No. 10,622. Base-Balls.—A. J. Reach & Co., Philadelphia, Pa.

"The words 'American Association Ball.'"

No. 10,663. Base-Ball Bats.—A. J. Reach & Co., Philadelphia, Pa.

"The word 'Special' on a red polished band encircling the bat."

DESIGNS.

No. 14,340. Font of Script Printing Type.—William W. Jackson, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place. Term of patent, 14 years.

No. 14,316. Font of Printing Type.—Carl Müller, Chicago, Ill., assignor to Marder, Luse & Co., same place. Term of patent, 14 years.

NEW PROCESS OF ENAMELING METALS.

Dr. Gebring has recently patented in Germany a process of enameling metal or alloy articles while they are being cast, the enamel, &c., being applied to the sand mold. The German patent records give the process in detail, which can be condensed as follows: The mold while yet damp is painted with finely pulverized charcoal; when thoroughly dry it is again carefully painted with a mixture of pulverized charcoal one part, and three parts pulverized pumice-stone well wet with petroleum. This forms the "isolating layer." When dry the enameling fluid is painted upon this layer; it consists of thirty grains sulphate of magnesia, mixed thoroughly with twenty grains of burnt white magnesia, in a litre of soft or distilled water. The enameling stuff is then spread carefully upon this enamel receiver while it is still damp, after being pulverized as fine as possible. The mold is then carefully dried, when it is ready for use, unless colored enamel is required. In that case the enamel colors are wet with gum arabic water and applied to the mold upon the enameling fluid, which should be perfectly dry.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

POWER, FOOT & HAND

Perforating Machines.

E. B. STIMPSON, 31 Spruce Street, New York.

E. P. DONNELL & CO., Chicago, Ill.,
Mfrs. of Bookbinders' Machinery and Tools.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

H. Hunter, paper-stock dealer, Parkersburg, W. Va., was burned out on November 27.

Thomas Shanley, bookseller and stationer, Mitchell, Ont., has sold out to R. O. Smith.

Baird & Parsons, publishers of the *Ontario Observer*, Port Perry, Ont., have been burned out.

An assignment has been made by Spiegel, Huber & Co., picture dealers, New York city.

Schneider & Gsell, manufacturers of window-shades, &c., Newark, N. J., have dissolved partnership.

J. H. Bufford's Sons announce their intention of bringing out a new line of Easter goods on January 1.

An attachment has been issued against the *Fair*, published by Toney Rosenbaum, Eau Claire, Wis.

George L. Myers, printer, Philadelphia, Pa., was advertised to be sold out by the sheriff on the 4th inst.

J. W. Orchard, dealer in wall-paper, Nashville, Tenn., has been damaged by fire and water. Insured.

The establishment of Weaver & McChesney, publishers of the *Albany Vindicator*, Albany, Wis., was burned out a few days ago.

S. B. Simpson (Mrs. J. J. W.), bookseller and fancy goods dealer, &c., Shelburne, Ont., has sold out the fancy goods and book business to Henry Bretz.

The firm of Dodge Brothers & Shreeve, stationers, &c., San Francisco, Cal., has dissolved. Samuel T. Shreeve retires, and the business will be continued by Dodge Brothers.

Edward Herrman, paper dealer, New York city, has admitted Moses Henry Herrman to partnership, and the firm will do business under the style of Edward Herrman & Son.

Brunston & Phelps, publishers of the *Independent*, Stockton, Cal., have dissolved partnership. C. W. Brunston has retired from the firm and R. M. Wood has been admitted to membership.

Mr. Downs, of Ogden & Downs, Ilion, Ill.; Thomas Wilcox, Harrisburg, Pa.; J. D. Wallace, Williamsport, Pa.; Mr. Pratt, of J. L. Fairbanks & Co., Boston, Mass., were among the out-of-town tradesmen who were in the city during the past week.

J. E. Linde is indefatigable in his efforts to surpass himself. He has added seven new numbers to his list of shape novelties. The "Cat in Window" is particularly good. The others are "Christ in the Manger," "Child Feeding Dog," "Rabbit," "Rocking Horse," "Knight in Armor," and the "Arbor." He has a new thing known as the automatic "Shut-the-Door" sign.

Now is the time when plush albums are in great demand for holiday gifts. The line manufactured by the National Publishing Company, Philadelphia, is very extensive and embraces beautiful and attractive styles. The company uses only the best silk plush, and all of the albums have extension clasps. The paper used for the face cards is white and of the finest finish, and a new process of manufacture prevents the wrinkling so common in other albums.

George W. Arms & Co., manufacturing stationers, Philadelphia, made an assignment last week for the benefit of their creditors. The firm confessed judgment for \$3,375 in favor of three different firms for money loaned. The liabilities of George W. Arms & Co. amount to \$5,000, and the assets to \$11,000. It is expected that the creditors will be paid in full by selling the goods at auction, which sale will take place in a very few days. C. E. Arms, son of George W. Arms, will continue the business with ample capital furnished by a number of friends. The name of the new firm will be C. E. Arms & Co.

A fire broke out in the office of the *Chicago Evening Journal* on Dearborn street, between Madison and Monroe, on Saturday last. The flames made rapid progress. The working outfit of the paper, with the exception of the presses, which were damaged, was completely destroyed. The *Evening Journal's* loss, which approximates \$75,000, is very nearly covered by insurance. The J. B. Jeffery Printing Company, which occupied part of the building, suffered a loss of \$130,000; insured for \$80,000.

The fine-colored tissue papers made by James R. Crompton, of London and Manchester, England, are superior goods, and the demand for them since their introduction has been steadily maintained. They are used for making artificial flowers and many other purposes requiring a paper of fine quality. They come in all popular colors. These goods are handled by George J. Knaf and also by the Dennison Manufacturing Company.

A fire broke out in the stationery establishment of C. Jourgensen, No. 98 Maiden lane, New York, on Friday night of last week. It originated in the upper portion of the building from some unknown cause. Timely discovery, however, together with prompt efforts of fire men, extinguished the flames before much injury was done to the stock. The damage to the building, which is owned by Mr. Jourgensen, was about \$1,500. The stock was only damaged about \$75.

Geo. B. Hurd & Co. show a very handsome and useful variety of elite engagement cards, elite correspondence cards, and an elite engagement and correspondence calendar for 1884. These cards are designed for ladies' use in keeping a record of their engagements, correspondence, calls, &c., and are furnished with frames in canvas, plush, velvet and alligator, and make a very acceptable holiday present.

The *Phrenological Journal* for December contains an interesting sketch of Professor Nicholas, the eminent French naturalist; an article on "Foot Prints in Ancient Sandstone," embodying an interesting description of several curious geological discoveries in the Rocky Mountains; sketches and portraits of Monsignor Capel and King Cetawayo, and other readable matter.

The firm of Paul & Carey, bookbinders and paper rulers, Philadelphia, Pa., has dissolved. Stacey F. Carey, general partner, and George Barrie, special partner, retire. George Barrie and John M. Paul have formed a new firm under the style of J. W. Paul & Co.

From a fire which broke out at 51 Crosby street, on Thursday morning, November 29, and which extended through to 196 Elm street, the stock and machinery of H. A. Deckrath, manufacturer of paper boxes, was damaged to the extent of about \$10,000.

The Bishop Brothers Printing Company, Burlington, Ia., has recently been burned out. Loss, \$15,000; insured for \$14,000.

H. Jenkins, bookseller and stationer, Huntingdon, W. Va., has failed.

Flory & Woy, publishers, Longmont, Col., have sold out to E. F. Beckwith.

Ellis & Roberts, printers, Utica, N. Y., have been partly burned out. Fully insured.

D. Levi, of the firm of D. Levi & Co., paper-stock dealers, &c., Cleveland, Ohio, is dead.

The West Point Paper Mill, West Point, Neb., has been advertised to be sold at sheriff's sale.

J. J. Holland & Co., dealers in wall-paper, &c., Denver, Col., are closing out their business.

The sheriff has taken possession of the book and stationery store of John Morrish, Chatham, Ont.

Frank Edgerton, bracket manufacturer, Lindsay, Ohio, has made an assignment to H. J. Kramb.

Prevost & Co., dealers in picture frames, &c., San Francisco, Cal., are advertised to be sold out by the sheriff.

The firm of Davy & Battle, paper-pulp manufacturers, Niagara Falls, N. Y., and Thorold, Ont., has been dissolved.

Joseph W. Hyer, late of Sibell & Hyer, will continue business as stationer and printer at 138 Fourth street, Brooklyn, E. D.

The *Globe* Printing Company (incorporated), Toronto, Ont., has sold out its job department to the *Grip* Printing and Publishing Company.

The Compressed Paper Box Company, Bridgeport, Conn., has been succeeded by a joint stock corporation of the same name, with authorized capital of \$10,000.

A dissolution has taken place in the firm of Jaffe & Co., paper-stock dealers, San Francisco, Cal. M. S. Jaffe will continue the business under the style of Oppenheim & Jaffe.

The Berlin & Jones Envelope Company is offering a line of New Year card-envelopes in different sizes at low rates. The company also carries a large stock of envelopes for all varieties of Christmas cards.

Forsyth & Wilson, booksellers, stationers, &c., Kingston, N. Y., are intending to change to new quarters, and will remove on January 15 to a large and handsome new store in the Ulster County Savings Bank building.

Paul Mende has lately originated several new styles of card fringes, tassels for dance orders, and a most select line of silk cords for plush goods, papeteries, &c. Mr. Mende carries a full line of card fringes, tassels, silk cords, &c.

F. H. Loss, Jr., comes out this week with a novelty in paper shades for lamps. These are imported goods in a variety of designs, such as floral decorations, variegated colors, &c. Though of a fine quality they are remarkably cheap.

C. F. H. Hinrich's establishment presents a busy scene just now. Purchasers of toys and other holiday goods are very numerous, and, if business improves very much more, Mr. Hinrich will have to make another addition to his already large emporium of holiday novelties.

Holway, Wright & Rich, who are sole agents in the United States for Chase's glue, report large sales in that article. This glue has superior adhesive qualities, and will "stick" well wherever introduced. It is put up in a shape especially convenient for families, as well as business men.

On Thursday morning, November 29, a fire in San Angela, Tex., consumed Kibbe & Robinson's bookstore, causing a loss of \$25,000; uninsured. The *Times* building, Vicker's printing office, and other property, were also destroyed.

the aggregate loss amounting to \$16,000; insurance, \$7,000.

Frederick L. Perine, stationer, &c., Flushing, N. Y., has sold out to Geo. A. Smith.

Neil C. Gibbons, newsdealer, stationer, &c., Wilmington, Del., has sold out to G. A. Davis.

G. W. Wilson, publisher of the *Lacon Banner*, Ocala, Fla., has been burned out. Loss, \$2,500; insured for \$1,800.

The firm of Beatty & Forst, lithographers, 44 West Broadway, New York, was dissolved by mutual consent, November 15, and a new firm was formed by James B. Beatty, Charles Forst and John De Yough, under the style of Beatty, Forst & De Yough.

In the case of Isaac W. Heysinger, Christian H. Hershey and J. Loren Heysinger and Geo. W. Heyl against James P. Crawford, a decree has been rendered in favor of the plaintiffs. The suit was brought for an infringement on Heyl's novelty paper fasteners.

R. R. Watson, 51 Nassau street, New York, has in preparation his new catalogue of "Stationers' Specialties" for 1884. He has added several new and desirable articles, and the trade will do well to send for a copy of the catalogue before making purchases for spring trade.

Henry Levy & Sons report a busy trade this week. This firm is constantly on the lookout for attractive novelties in fancy goods of every description, and its stock is so large and varied that it gives great latitude to the tastes of intending purchasers when making selections.

Daniel Boyle, for about ten years in charge of P. P. Mast & Co.'s printing office and stationery department, at the Buckeye Works, Springfield, Ohio, has resigned that position to become superintendent of the St. Louis Stationery and Book Company's establishment, at St. Louis, Mo.

A CREDITORS' MEETING.

A meeting of the creditors of Culver, Page, Hoyne & Co., of Chicago, was held at the rooms of the Stationers' Board of Trade, on Wednesday, November 5. The meeting was called at the solicitation of the firm, which was represented by H. C. Culver, its senior member, G. M. Culver and a Mr. Smith, their attorney. Mr. Horton, of Chicago, represented Mr. Hoyne, who, though a member of the late company, stands in the position of a creditor, having been a stockholder of the corporation. About fifty creditors were present. They were the New York and Eastern creditors generally. Among the New York creditors were Henry Levy; Wm. C. Horn, of Koch, Sons & Co.; Mr. Von Auw, of Liebenroth, Von Auw & Co.; Mr. Keuffel, of Keuffel & Esser; George L. Pease, of Boorum & Pease; Phil. Hake, and representatives of Samuel Raynor & Co., Turner, Harrison & Co., and French & Choate. W. T. Pratt, Chairman of the Finance Committee of the Stationers' Board of Trade, presided.

Mr. Young, chairman of the committee ap-

pointed at a meeting of the Stationers' Board of Trade to take action toward collecting the claims of the Eastern creditors, reported that practically nothing had been done in the matter beyond inducing Culver, Page, Hoyne & Co. to call the present meeting.

Mr. Smith then made substantially the following statement on behalf of his clients: Culver, Page, Hoyne & Co. was a corporation under the laws of Illinois. The liabilities of the firm amounted to \$753,000, of which \$317,128 88 consisted of judgment notes held by Culver & Co. and the Union National Bank, of Chicago. The judgment notes had been liquidated by the proceeds of the sale to Morris, and a balance of about \$14,000 was left. The judgment notes were for money loaned to H. C. Culver on behalf of the firm, and for paper handled by the Union National Bank. The merchandise accounts owed by the firm amounted to \$145,000.

H. C. Culver stated that they had acted conscientiously and honestly. They had made mistakes, but they were more due to erroneous judgment than an intention to do wrong knowingly. The sale made to Morris was absolute. Prior to the sale he believed that the firm could be carried along and meet all its indebtedness, and borrowed money from his brother, who was of the firm of Culver & Co., a commission house in Chicago, to keep the corporation afloat.

Mr. Horton said that he represented the largest creditor of the company by odds. Mr.

Hoyne's claim amounted to \$100,000. It was for money loaned the corporation and for collaterals given to H. C. Culver as security on which to borrow additional funds. "I have investigated the matter," continued Mr. Horton, "and have been deliberating whether it is best to attack the sale as a stockholder or as a general creditor. I have an idea that a creditor stands in a different relation than a stockholder in attaching the sale of a corporation. I take it that the Board of Directors of the corporation who made the sale were the agents of the stockholders. As a general creditor, I do not see how I can break that sale to Morris. As a stockholder, Mr. Hoyne has a far better opportunity of doing so; but I don't see what would be the advantage. I believe that that sale to Morris is more than the property is worth. If I were John Morris I would give you \$50,000 to take it off my hands."

After some further discussion, Messrs. Young, Von Auw, Butler, Meyer, Levy, Keuffel and Horton were appointed a committee to confer with the representatives of the firm and their lawyer for the purpose of determining what proposition they could make, if any, in the nature of a settlement or compromise of the claims of the Eastern creditors. Pending such conference, the meeting was adjourned until the following day at 2.30 P M.

The only jewel which will not decay is knowledge.

Foley's Patent Improved Stylographic Pen.

Great reduction in price: No. 1, \$1.50; No. 2, \$2.00; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

ANTICIPATIONS OF ST. VALENTINE.

There are few kinds of art productions in which there is greater room for the exercise of delicate and refined sentiment than those pretty and often elegant souvenirs called valentines. The artist has not only to pay great regard for the execution of his work, but there must also be much taste exercised in choosing a design by which to convey the sentiment. L. Prang & Co. have just added to their line of valentines a large number of entirely new designs for the season of 1884, which, for execution, appropriateness and elegance generally, make them superior to anything hitherto brought out by this house, so well known for its excellent productions in art works. The new styles are too numerous to mention in detail. Chief among them is a large, elegant card, copied from the painting of F. S. Church's "Lion in Love," which was only a few months ago brought out and placed on exhibition in the Academy of Design, where it took the place of honor. This card is about 12x14 inches square. The subject represents a lion couched at the feet of a beautiful maiden. The royal beast, who "bendeth gently with a chain of flowers," is charmed by the picture of beauty before him, as well as bereft of his accustomed fierceness. The scene is laid amid a picturesque bower of leaves and vines, such as is met with in a dense forest. This production alone is, perhaps, the finest thing of the kind ever seen in this country. Like every beautiful work of art, it is impossible to do justice to it by a brief description. The design is printed on cushioned satin, surrounded by a white plush border.

No. 302 of the smaller cards embraces six designs by Mrs. O. E. Whitney. It is a small, square card, handsomely fringed and altogether very pretty. Mrs. Whitney has also produced in No. 303 four very pretty designs. This card is a little longer than the former. It represents floral scenes, the features of a lovely child being in the centre, thus suggesting tender sentiments. The coloring is very rich and natural.

In No. 304 Mrs. Whitney has also displayed excellent taste. There are four "shape cards," each representing a bouquet of choice flowers. A delicate satin card with tassels is tied around the stem of the bouquet, adding to its novelty, while the appropriateness of the card is shown by an inscription in verse.

No. 307, two designs by L. B. Comins, represents children in the act of love-making, thus being emblematical and highly appropriate. Harry Beard has produced two elegant designs in No. 308. They are pictures of Cupid, one representing the little fellow blindfolding an owl. The following lines very neatly express the sentiment which it is intended to convey:

The owl speaks, they call him blind,
They name him wise;
And yet I find, eyes or no eyes,
Cupid can see—
To hoodwink me, even me.

F. S. Church, in addition to the popular piece already mentioned, has also produced two designs on a smaller scale. One represents Cupid seated at the feet of a love-sick maiden, and amusing her by playing upon a harp. The card is of a large, oblong shape and is handsomely fringed and gilt bordered. The line throughout is exceptionally fine.

Ambition is a good thing; energy is a good thing; industry is a good thing. But restlessness, fretfulness and worry—these tend to insanity and death.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY---\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 6, 1883.

Advertisements cannot be received for insertion in the current week later than 12 M. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

CONGRESS has met and the President has addressed to it his annual Message.

SPEAKING from a business standpoint, we are impressed with the plain, business-like character of the President's Message. There is no attempt at rhetorical flourish, and what has been said will attract attention. There are some things which the Chief Executive recommends that deserve consideration.

THE financial exhibit of the country is shown to be satisfactory. The question is raised whether the extinction of the national debt should be conducted as rapidly in the future as in the past. This is a subject on which there is wide difference of opinion. Aside from its treatment as a political issue, there is, perhaps, no reason why we should not move more slowly in the extinction of the debt; but, on the other hand, as a matter of national pride, we should rejoice to become "free and independent" of all money obligations. The chief point to be considered is whether a reduction of taxation can be made which will enure to the benefit of the people. We do not think that the excise duties are a burden upon the country. The cry on behalf of the "poor man's tobacco and beer" is one of the demagogic arguments that the country can afford to disregard. Were these two consolations cheaper, the poor man would not be likely to be any better off. He would only consume more tobacco and beer—perhaps to his detriment.

REDUCING taxation is discussed. This reduction, so far as the national government is concerned, relates to the customs and internal revenue duties and the tax on the circulation and deposits of national banks. We have already given our views as to internal revenue. As for the customs, it may be possible to make some modifications, which should not, we think, derogate from the principle of encouraging our industries and fostering their growth. That there are anomalies in our tariff which need remedy is apparent. One of our troubles has been that tariff legislation has generally been badly or hastily framed, and without detail and symmetry to simplify it and render it least inconvenient. To make radical changes in the tariff would not, we think, be desirable if they were so sweeping as to hand our home markets over to the control or easy competition of foreigners. The tax on the banks and on their circulation could be easily dispensed with, and the proposition to allow the banks to emit notes to the extent of 90 per cent. of the average market value of their United States bonds for the year preceding such issue, is a fair proposition and one that ought to be acceded to.

THE reduction of postage and the postal telegraph are touched upon by the President. The recommendation of the Postmaster-General that "drop" letter postage at free delivery offices should be reduced to

one cent is concurred in. We think that this is a change which ought to be made. Indeed, we may say that we favor generally every proposition looking to lower postage, believing that the growth of the postal revenues will be so rapid and great as to compensate for any temporary falling off or probable temporary deficiency. On the subject of the postal telegraph we are not so fully in accord with the views of the President, who dissents from the recommendation that the government should assume that control over the telegraph routes which it exercises over the mail. We have been confirmed in our belief of the necessity of government supervision of the telegraph lines, and cannot reconcile the method of delivering telegraphic dispatches with the laws relating to the delivery of mailable matter. Why the telegraph companies should enjoy an immunity which others are unable to secure is not plain to us, and their frequent errors and careless disregard of obligations to the public seem to us to warrant the establishment of telegraph facilities by the government. But we do not advocate the purchase of existing lines. It would be preferable to construct new lines and then reducing the cost for the transmission of messages, still aid the postal revenues to an appreciable extent. The belief expressed by the President that some sort of supervision over inter-state telegraph communication should be had by the government, is only introductory to the main proposition, which could better be put into effect at once than be made a matter of experiment. There are some other things which we think might have properly been suggested, such as the desirability of a bankrupt law. Among the other matters with which his message deals are our foreign relations and our treaty rights with different countries. The advantages of a closer commercial union with Mexico are averted to, besides other things affecting our foreign trade; other public interests are also discussed. Altogether, the Message, as we have remarked, is a plain, business-like document which deserves the perusal of business men.

ROUNABOUTS.

BY THE TRADE LOUNGER.

Remark was lately made in THE STATIONER of the handsome Xmas number of the *Publishers' Weekly*. Now, the trade will admire the *American Bookseller* for Christmas, 1883. Beautifully printed, profuse with illustration, and with a stylish cover, it is one of those things which people will want for "keeps."

A paper company in Holyoke is making a manilla writing which is taking very well. One of its latest products is a manilla paper for checks. Samples shown are sufficiently attractive to warrant this mention of it.

A water-color exhibition is going on at the store of Charles T. Bainbridge's Sons. It is said to comprise one hundred and seventy pictures, executed by artists of the French Acad-

emy and the leading art-schools of Paris. These pictures are not for sale. It is very kind of our friends to present such a show. Visitors to the city should not fail to take it in. All are invited.

A paper out in Milwaukee regularly prints as reading matter a notice of a "dime museum." The paper in question claims to be a "trade" journal. Hadn't it better come out particularly as an organ of the ten-cent shows?

Some of the pretty window displays seen this week deserve remark. One was a bank of artificial flowers, whereon was a mechanical toy representing a young man and a maiden engaged in the old, but ever delightful, game of courting. There was also a toy representing an ape riding on a velocipede. The show was placarded: "This is a souvenir of 1883." A well-known toy dealer on Broadway is responsible for this.

A little store on one of the avenues, where local repute only obtains, makes a very nice window. Looking at the components of the exhibit in detail the connoisseur will discern that there are many cheap and comparatively few goods displayed, but there is a diversity, and the arrangement is such as to make people pause. This is taste—art, in fact.

Among some new things seen this week was "a cheap and novel pencil," so called. It has features which would induce buyers to purchase; but how are the makers going to sell it if they don't advertise.

One of our commercial bodies is sending around an analysis of the Lowell bill, intended to provide a uniform system of bankruptcy proceedings. This is the bankrupt law once before, and now again, presented for Congressional action. Those of the trade who have not read this analysis ought to do so.

It is to be hoped that the trade will read the communication of the President to Congress. It has points which concern all business men. The message is not any fancy document, but it is common sense in its style, however much difference of opinion may prevail as to its suggestions.

A correspondent of a Boston paper wants to know how to disgust a rat. He wants to prevent the rodent from eating paste which is used on leather. Mix jalap with the paste, and if that doesn't answer the purpose, use a dynamite cartridge.

The *American Journal of Otology* reports the following: "A doctor of extensive practice suffered from a crackling noise every night just after going to bed. He happened to mention his sufferings to one of his lady patients, who told him of a case she knew where the noise was found to be due to maggots in the pillow. The doctor examined his own pillow when he got home and found plenty of maggots, the pillow having gone far toward decay. A new pillow cured him."

This seems to be something new, or, at least, a new way of expressing it. In some localities they would suggest "snakes."

♦♦♦♦♦

God has placed the genius of women in their hearts; because the works of this genius are the works of love.—*Lamartine*.

ANSWERS TO CORRESPONDENTS.

P. H. S. wants to know where to get wire cork-screws.

Ans.—They are made by the Clough Manufacturing Company, Newark, N. J.

R. & R. ask: Who manufactures the shelf-boxes illustrated in *THE STATIONER* of November 29.

Ans.—Globe Files Company, Cincinnati, Ohio.

Q. E. D. wants to know where the Judd Manufacturing Company is located.

Ans.—Wallingford, Conn.

F. L. P. desires to be informed where Breed's scrap-book (made up of envelopes) can be obtained.

Ans.—We don't know. It was made by Boorum & Pease, who state that the manufacture has been discontinued.

ANCIENT BRONZE WORK.

In the gardens of the Vatican, says an exchange, there is preserved a colossal cone or pineapple in bronze, which evidently surmounted some building in ancient Rome. In looking at some of the paintings by Alma Tadema, in which the society and surroundings of ancient Rome are depicted with such scholar-like knowledge and minuteness, one can almost feel the enervating influence of that soft Italian climate and realize how grateful the shade of those stately porticos must have been, when one could watch the throngs, as on pleasure bent, they paced with sandaled feet and clad in ample

toga or loose-flowing lawn the polished surface of those costly mosaic pavements, flecked with alternate light and deep shade cast by columns of the rarest marbles; and the eye, dazzled with the motley throng, would seek relief by looking upward to the massive beams and coffers of the paneled roofs, refulgent in the reflected half-light with gilded bronze, or would turn to wondrous statues of ancient art, lifted high above the moving mass on their richly decorated pedestals, calmly majestic, masterpieces of Praxiteles, Polycleus or Phidias, of the purest Parian marble, or the burnished bronzes of Myron, ethereal in their beauty, the spoils of captured provinces; then turning to the outside, the eye would have seen distant domes of gilded bronze shimmering in the haze, and, towering above all, the gilded capitol and colossal statues of the same material reflecting the sunshine. Wherever you turned in ancient Rome you would see bronze, either left in that exquisite natural tone of green oxidation or resplendently gilt.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, December 5, 1883. }

THE MONEY MARKET.—A better inquiry was shown for money and call loans ranged $2\frac{1}{2}$ @ 3 per cent. on stock collateral, but loanable funds are still abundant and an easy money market is looked for until after the end of the year. Speculation on the Stock Exchange was irregular at a general decline. A heavy pressure to realize depressed the market from the opening, prices being further weakened by the operations of professional traders. Railroad bonds were active and irregular. Foreign exchange was very quiet and lower, without much pressure to sell. The demand from remitters is small and the supply of cotton and security bills fair.

THE PAPER MARKET.—Thanksgiving Day, besides the period covered by our review, being about the last of the month, have been causes which have circumscribed trade among the city dealers within narrow limits. While dealers have felt this interruption to business, manufacturers generally have no falling off in the number of orders for goods to be made up. With the exception of the weak feeling ruling in straw wrappings and straw boards, prices continue to rule with considerable steadiness. As usual at this time of the year, there is a good demand for tissue manillas, and, like other good grades of manillas, these are firm in price, due more to their increased cost than to demand. Print papers continue to maintain a very steady position.

THE STATIONERY MARKET.—The condition of trade this week is quite satisfactory. There is no extreme activity shown, but the market for staple goods is fair and steady. While out of town orders have fallen off somewhat, the local demand is good, with a tendency toward improvement. The near approach of Christmas and New Year has enlivened trade in holiday goods considerably, and dealers generally report a very active business, mostly of a local character, in which, notwithstanding great competition, prices remain firm. In fine stationery there is shown a fair demand, perhaps equal to that of any corresponding period in previous years. Much business is coming in in the shape of reorders. Blank-books do not show any increase in demand, but trade is normally active. In envelopes there is little doing and prices are very much cut up, leaving a very small margin of profit. The trade in school stationery is very fine, better than it has been for some months. The close proximity of the holiday season has infused new life in the trade in Christmas and New Year cards, and there is every probability that dealers who have been predicting a poor season in this line will find at the end of the year that they have passed through a really profitable one. Dealers in plush goods report a good business, and it is probable that they will be more busy next week. The novelties offered in this line this season are much superior to those of previous years, and the great competition has brought these goods down to a low figure.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

THE NATIONAL PAPETERIE COMPANY,

MANUFACTURERS OF

PAPETERIES, FRAMES, MIRRORS, AND FINE ART BRONZE GOODS,

SPRINGFIELD, MASS.

TRADE NEWSPAPERS.

There is now and then a person so stupid as to believe that advertisements in trade newspapers are not generally read, and that money expended in advertising this way is practically wasted. Then there is another class, who, if a map or poster is presented to them, will readily give their advertisement to form a frame around the same. Also, when the "Directory" man comes around, they must have a card at the top of the page, or perhaps a full-page advertisement, and they are willing to pay a big price for this class of advertising. What good does it do him? None whatever; for it is not seen, and does not reach the class they desire.

Now, a good trade journal, published directly in their interest, goes directly to the class of trade they wish to influence.

If a hundred men of polite address, of fluent speech and ready wit, were to call, weekly or monthly, each upon a hundred others and get the attention of each long enough to say John Smith has made a great improvement in such and such a machine, or that Jones or Brown, at such a place, have a complete and full line of wood-working machinery, we will readily concede that the services of this one hundred men would be of great service to Smith and Jones, and great advantage to the party to whom the statement was made. The hundred men could not be employed to go from place to place—some small and distant places—and make this statement to five or ten thousand people, at less than a cost of several thousand dollars each trip. All this is done by the trade newspaper, at a cost of a few hundreds at the most, and the visits are made weekly or monthly, as the case may be. The messenger who travels addresses himself to the ear, and takes the party addressed when he may have his thoughts absorbed in business or other matters; but the trade newspaper reaches the party sought through the eye when the reader has his thoughts solely fixed upon the paper before him. But those who affect to believe that there is little use in advertising urge, as an objection, that advertisements are not read. They can easily be convinced of their error in this respect by making inquiry. Let them insert an advertisement, offering to purchase some article that is tolerably plenty in the market, and they will be flooded with offers to sell before the ink of the advertisement is dry. An enterprising trade newspaper, with an extensive circulation, is in a position to do the advertiser great good. In its sphere, the trade newspaper is worth a dozen New York *Heralds* or *Tribunes*, with their circulation of hundreds of thousands, to an advertiser in whose interest the trade journal is published. A man's sign offers a mute invitation to those only who pass his place of business; his circulars can only reach those to whom particular attention is given; but his advertisement in a trade newspaper goes into the highways and byways, finding customers and compelling them to consider his argument.

Advertisers sometimes say: "Well, I cannot afford a large advertisement, and a small one won't do me any good." Now, our advice is: Don't be afraid to have a small advertisement by the side of a larger competing one. The big one can't eat it up.—*Journal of Progress*.

A new industry in Japan is said to be that of lacquering plaster in a way which causes it to resemble marble. On a basis of clay this lacquer work is especially novel. The clay is baked after the fashion of porcelain, and the hardness and ring of the material combine with the skill of the lacquerer to produce a result only distinguishable by the expert from marble itself.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

NEW LIST AND DISCOUNTS OCTOBER 1, 1883.

THE PNEUMATIC COPYING PRESS.

WE take pleasure in calling the attention of the trade to our improved Copying Press. It has many advantages over the "Screw Press." No separate stand is required. It can be operated on any desk, table or chair, being perfectly portable.

The rubber legs prevent its marring the finest table.
One-half the time and three-quarters of the labor saved.

The great beauty, together with the portability of the Pneumatic Press, especially adapts it for use in handsome offices and residences.

Send for Illustrated Catalogue.

LIBERAL DISCOUNTS TO THE TRADE.

A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY WILL SEE BY EXAMINING THIS MAP THAT THE

CHICAGO, ROCK ISLAND & PACIFIC R.R.

By the central position of its line, connects the East and the West by the shortest route, and carries passengers, without change of cars, between Chicago and Kansas City, Council Bluffs, Leavenworth, Atchison, Minneapolis and St. Paul. It connects in Union Depots with all the principal lines of road between the Atlantic and the Pacific Oceans. Its equipment is unrivaled and magnificent, being composed of Most Comfortable and Beautiful Day Coaches, Magnificent Horton Reclining Chair Cars, Pullman's Prettiest Palace Sleeping Cars, and the Best Line of Dining Cars in the World. Three Trains between Chicago and Missouri River Points. Two Trains between Chicago and Minneapolis and St. Paul, via the Famous

"ALBERT LEA ROUTE."

A New and Direct Line, via Seneca and Kankakee, has recently been opened between Richmond, Norfolk, Newport News, Chattanooga, Atlanta, Augusta, Nashville, Louisville, Lexington, Cincinnati, Indianapolis and Lafayette, and Omaha, Minneapolis and St. Paul and intermediate points. All Through Passengers Travel on Fast Express Trains.

Tickets for sale at all principal Ticket Offices in the United States and Canada.

Baggage checked through and rates of fare all ways as low as competitors that offer less advantages.

For detailed information, get the Maps and Fold

CHICAGO.

PAPER-HANGERS' PASTE.

First heat water to boiling, then add flour, with constant stirring; to prevent the formation of lumps the flour may be passed through a sieve, so as to insure its more equal distribution. Agitation is continued until the heat has rendered the mass of the desired consistency, and, after a few moments' further boiling, it is ready for use. In order to increase its strength, powdered rosin in the proportion of one-sixth to one-fourth of the weight of the flour is added. To prevent its souring, oil of cloves or a few drops of carbolic acid are added.

LUMINOUS PAINT.

According to Dr. Macgowan, the art of making luminous paint was very early known to the Chinese, and that three centuries ago the tradition of the art had not died out. Popular works on natural magic contain several formulæ, but these may have been obtained from European sources. The tradition is that the Emperor Tai Tsung, who flourished toward the end of the tenth century of the Christian era, was presented with a picture which at night represented a cow lying down within a fence, while during the day the cow browsed outside. The explanation is that the night picture was painted with a paste made of South Sea pearls, mixed with a pigment luminous at night, while the day picture was produced by powdered reef stone.

He who would eat the kernel must crack the nut.

Erie Chicago Line

PASSENGER ROUTE.

THE SHORTEST, QUICKEST, AND SAFEST ROUTE to all points EAST. Two trains to the East daily, leaving Chicago at 5.40 P. M. and 11 P. M. The only route running PULLMAN PALACE HOTEL COACHES between

NEW YORK and CHICAGO,

LEAVING CHICAGO AT 5.40 P. M.,

Returning leave New York at 8 P. M.,

Making direct connection at Chicago for all points beyond.

You should travel by the E. & C. LINE,

BECAUSE its trains run through from New York to Chicago, avoiding the dangers of transfers, the risks attending the changing of cars, and the possibility of missing connections.

BECAUSE the PALACE HOTEL COACHES run in connection with its trains, furnish Meals as good as can be had at any first-class hotel, and allow passengers to eat with as much comfort as at their own homes.

BECAUSE not one passenger has been killed or even injured on its trains since the opening of the line five years ago. Nor has an accident of any kind occurred.

BECAUSE the great variety of scenery on this line renders the journey pleasant and profitable.

BECAUSE provision has been made for running the trains from Mansfield, "Special" to destination, whenever they arrive after departure of train forming regular connection. This insures a continuous passage between New York and Chicago.

A. E. CLARK, Gen'l Passenger Agent,
Cleveland, Ohio.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

DISCOVERY OF LITHOGRAPHIC STONE.

An important and valuable discovery has recently been made by a well-known California artist. He was out on a sketching tour in Kern County, near Tehachapi Pass, and becoming absorbed by the wild and magnificent scenery, he wandered on from hill to hill, from peak to peak, until he found himself completely lost. His artistic eye was attracted by a bold, white cliff of rock standing out boldly and sharply against the blue sky. He made a sketch of it and decided to take a nearer view. On close examination it proved to be composed of a stone with which he was quite familiar, and had often had occasion to use in the pursuit of his calling. This stone is only found, so far as known, in the celebrated quarries of Solenhofen in Bavaria, not far from Munich.

He tested it with his knife and found it to have the requisite hardness, of the same color and fineness—in fact, a genuine lithographic stone for which France had offered so large a reward to anyone who would discover a substitute. He at once recognized the value of his find—there being but one other known quarry in the world of this peculiar stone. He came to the conclusion that, though he had lost himself, he had found a valuable mine.

He selected pieces of the several varieties and soon found his way to camp. He went to San Francisco, thoroughly tested the stone and found it the genuine article, and then returned to his quarry and located the land in conformity with the laws of the United States. On his return to San Francisco he carried slabs which were tested by competent men. The Solenhofen quarry produced annually on an average 13,100 cubic yards of lithographic stone at a cost of \$1,000,000, which sells for \$10,000,000. The importation and consumption of the United States for the year 1880 was an average of 13¼ tons per day.

This quarry is extensive enough to more than supply the United States and add another important link to our industrial resources.

BRONZING CASTINGS.

The following has been recommended for bronzing castings: Dip the articles in a bath composed of hydrochloric acid, 6 pounds; sulphate of iron, half a pound; white arsenic, half a pound, until black. Then wash in hot water. Dry in sawdust, polish to suit with plumbago, and brush and lacquer. The following is recommended in Spon's "Workshop Receipts:" Take one pint of methylated finish, add 4 ounces of shellac and ½ ounce of benzoine; put the bottle in a warm place, shaking it occasionally. When the gum is dissolved, let it stand in a cool place two or three days to settle, then gently pour off the clean mixture into another bottle, cork it well and keep it for finest work. The sediment left in the first bottle, by adding a sufficient quantity of spirits to make it workable, will do for the first coat or coarser work, when strained through a fine cloth. Next get half pound of finely-ground bronze-green—the shade may be varied by using a little lamp-black, red ochre or yellow ochre; let the iron be clean and smooth, then take as much varnish as may be required and add the green color in sufficient quantity, slightly warm the article to be bronzed, and with a soft brush lay on it a thin coat. When that is dry, if necessary lay on another coat, and repeat until well covered. Take a small quantity of the varnish and touch the prominent parts with it; before it is dry, with a dry pencil lay on a small quantity of gold powder, and then varnish the whole.

CARTER, DINSMORE & CO., BOSTON and NEW YORK.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot,
Each sheet is water-marked with name and date.

LOCKWOOD PRESS, 74 Duane Street, New York.

The American Stationer

A JOURNAL DEVOTED TO THE INTERESTS OF THE STATIONERY & FANCY GOODS TRADES

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 24. NEW YORK, DECEMBER 13, 1883. WHOLE NO. 442.

Correspondence.

BOSTON BRIEFS.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE OF THE LOCKWOOD PRESS,
49 Federal Street,
BOSTON, December 11, 1883.

Unless the weather changes within the next two weeks we will have to postpone Christmas. No one ever saw Santa Claus driving out in a hack or clad in a linen duster. It isn't his style. Snow-capped roofs, hanging icicles, and a frost-laden wind are all essential to the full enjoyment of a Merry Christmas, and for these are we sighing. So "blow ye winds and let the storm-king rage."

All of the change observed is in the retail trades, and there I see a great deal of change dropping daily into the tills. Overcoats are being marked down "in red figures," with no takers; but the figures on holiday novelties are going up, and plenty of buyers.

Dropping into the aristocratic establishment of H. H. Carter, up near Beacon Hill, to get a "point on trade," I could but nod my head to the genial proprietor, whom I could just about discern in the background. To get near him was impossible, so I stood for a moment watching the people. How anxious they looked, fearing that the stock of cards and novelties would run out before they got at 'em.

Stevens & Manchester, the new firm, are displaying an extensive stock of rich stationery, cards and holiday novelties. These gentlemen are very well pleased at the flattering success of their business venture, and they trust that after the holidays are over they won't have to work on Sundays.

The Forbes Lithograph Company has purchased the spacious building in Chelsea, which was built some two years ago by the Globe Manufacturing Company, but never occupied. The building will be fitted up and occupied at as early a day as possible. All of the machinery, presses, &c., now in use at the present establishment on Devonshire street will be removed to the new building. A Boston office for the transaction of business will be retained.

Charles K. Wadham & Co., manufacturers of blank-books and card albums, report that trade has been very good for the past month or two, but it is a little dull just now. The blank-book makers will have their turn later, after the new year sets in. In card albums, this house was just about able to squeeze through in filling its orders. Hundreds more could have been sold, but the house did not dare push business in this line.

The volume of trade in card albums was much larger than anticipated, and very few manufacturers will have anything to carry over in this line. This house does quite an extensive jobbing trade with the West and enjoys a good local trade throughout New England, both of which are yearly increasing.

The holiday catalogue issued by F. Trifet should be in the hands of every stationer in the country, for the house offers some special bargains in a variety of lines, which will have ready sale even after the festive season is over. Toys, albums and choice publications, popular vocal and instrumental music, artists' materials, &c., are among the articles offered.

George F. King & Merrill are obliged to put in night-work to keep even on orders. They are doing a pretty big business in staple goods for this season of the year. King's office pens are meeting with greater success than was expected, and orders are received from every State in the Union. Every mail brings a dozen or more orders. And what do you suppose some of the correspondents write the house by way of introduction? Now, don't give it away. Somebody might "catch on." Well, they say: "Our attention has been called to your pens by your advertisement in THE AMERICAN STATIONER."

In the fire of last Saturday morning on Federal street, Mr. Lawrence, printer, had his establishment totally destroyed, losing about \$6,000, upon which he had only \$3,000 insurance. With the stock destroyed was a number of valuable plates belonging to Mr. Charles H. Whiting, which were lost, upon which Mr. Whiting had an insurance of \$500.

Charles M. Thacher, manufacturer of picture frames, have a large stock on hand for the holiday trade, valued at \$18,000, all of which was entirely destroyed. Insured for about \$6,500.

George Coleman, bookbinder, suffered to the extent of about \$3,500; fully covered by insurance.

A number of other business concerns were also considerably damaged, some of them very seriously. The Standard Paper Bag Company loses property to the amount of some \$50,000, upon which the company has about \$40,000 insurance.

E. G. Robinson, manufacturer of twine, lines and paper, estimates his loss at \$5,000; partially insured.

The Exeter Machine Company and the Page Belting Company also suffered some damage. The entire loss is estimated at about \$100,000.

A. L. D.

Learn to control your temper.

COMBINED FOIL AND FABRIC PAPER.

In order to render the highly-ornamental tin-foil of commerce capable of use for inclosing and covering articles of manufacture and goods put up in small packages, it has long been the practice to protect it from rupture, and the articles and goods it covers from injury, by combining with it a lining of paper, which latter was depended upon for the necessary strength to retain the foil in place and resist any tendency to tearing, rupture or abrasion likely to result in ordinary use, thus enabling this foil, capable of receiving beautiful surface-finish, to come largely into use wherever its water-repellent or ornamental qualities were desirable. This method of protection was improved by the discovery of a means of uniting the thin foil—whether plain, embossed, printed, frosted, rendered dead-white, or otherwise ornamented—directly with the paper backing, so that the two became a compound or united fabric. Such a fabric has become a product largely used, especially where strips of it require to be attached to goods, or sheets of it are formed into envelopes that require frequent opening. Practically it has been found, however, that where raw edges of this compound or united fabric are exposed, especially when cut into narrow strips, the abrasion due to handling causes the united layers to separate at the extreme edges, which separation, once started, is liable to extend to such a degree as to destroy the strip.

To remove this defect a sheet or strip of compound foil and paper has been devised, whether united by cement or paste or not, with a folded edge which may extend along the two sides of the strip only, or also be provided at the ends. Many forms of the fold may be made.

A practical mode of making these strips with folded or bound edges is had by uniting or associating the two materials in large sheets superposed, then cutting the same into strips of appropriate size, and then, by means of any common folding devices, the edges, to a proper width, are gradually turned up and over onto the body, or vice versa, and then pressed down into place. Properly furrowed rolls will cause the body of the strip to be pressed downward, so that the back surface will be level and the edges protrude on the face side, or vice versa.

It is preferable that the foil shall be embossed to heighten its ornamental effect, and this should be done by passing the combined material between properly-engraved rollers, whereby they are perfectly laid together and given even surfaces.

Where the paper lining is made of a single layer and the foil layer is wrapped over it, the

paper and foil of appropriate widths must, of course, be united in narrow widths. The layers may be cemented together or not, as may be preferred, though in most uses of the combined fabric this is desirable.

Strips made according to this invention present what may be termed "bound edges" that will resist all ordinary wear and use, and their layers have no tendency to separate. They are especially well adapted to be handled in the speedy manipulation required in applying them to packages, as they afford a greater rigidity than can be attained by the union of their layers in any other way. In the special use of such strips in the marking of plugs of tobacco (the strip bearing the graduations for division of the plugs, or trade-marks and the like), the element of great strength is very desirable, as the strips, after being applied to the plugs, are subjected, when a mass of the plugs are packed together in a box, to very great pressure, and when plug after plug is removed from the box the foil surface of these strips will resist all tendency to be pulled off from the paper lining or the whole strip from the plug, which is one of the defects found in the old form of foil strip.

A form of strip having a depressed centre is especially desirable, for the reason that its protruding edges present a comparatively small surface-area to be engaged by a foreign body, and its tender foil surface is thus largely protected, and particularly is this so when the turned-over portion presents a face of paper.

Cloth—such as buckram, sleazy muslin, and like cheap fabrics—whether stiffened or not with sizing, may be substituted for paper.

INDIA INK.

A Chinaman named Chen-ki-souen has written a monograph on the famous Chinese ink, more commonly known here as India ink. The following interesting extracts, regarding its history and preparation, are taken from the *Deutsche Industrie Zeitung*:

Many articles are found in the extensive literature of China written by their learned men about the paper, ink and brushes that they use for writing, but unfortunately very little is said about the technology of their inks. It is quite otherwise in the recent book written by Chen-ki-souen, for he describes every stage of its preparation with great accuracy and in detail.

According to our celestial author, a kind of pigment ink was discovered 2697 to 2597 B. C. It was employed for writing on silk with a bamboo rod. Afterward an ink was prepared from a certain stone (*encre de pierre*), which is still known in China as *ché-héi*. It was not until 260 or 220 B. C. that they began to make an ink from soot or lampblack. The soot was obtained by burning gum lac and pine wood. This ink was made at first in round balls and very soon supplanted the stone ink.

For a while the province of Kiang-si appears to have had a monopoly of ink making. Under the dynasty of Tang, in 618 to 905 A. D., there was a special officer called an inspector, who had charge of its manufacture. He had to furnish the Chinese court with a certain quantity of this ink annually. Some of the factories seem to have been "royal Chinese" factories. The Emperor Hsuan-Tsong (716 to 756 A. D.) founded two universities, to which he sent 336 balls of ink four times a year.

The most celebrated ink factory in China is that of Li-ting-kouéi, who lived in the latter part of the reign of Tang, and is said to have made an excellent article. He made his ink in

the shape of a sword or staff, or in round cakes. The test of its authenticity consisted in breaking up the rod and putting the pieces in water; if it remained intact at the end of a month, it was genuine Li-ting-kouéi. Since the death of this celebrated man there seems to have been no perceptible advance made in the manufacture of India ink.

In the manufacture of lampblack nearly everything is used that will burn. Besides pine wood, we may mention petroleum, oils obtained from different plants, perfumed rice flour, bark of the pomegranate tree, rhinoceros horn, pearls, musk, &c. Nor does fraud seem to have been entirely wanting. According to Chinese authorities, the principal thing is the proper preparation of the lampblack; the best smells like musk, and the addition of musk not only serves to give poor goods the resemblance of fine ones, but really makes it worse.

The binding agent plays the chief part next to the lampblack; ordinary glue and isinglass alone are now used. In old times glue made from the horns of the rhinoceros and of deer was employed.

Good Chinese ink improves with age, and should not be used for a few years after it is made. It is not easy to keep it, as it must be protected from moisture. Some persons, in rubbing it up, make circular movements that soon ruin it. It is better to rub it in straight lines back and forth with the least possible pressure.

POST-OFFICE CHRISTMAS CARDS.

For several years the general post-office in London has sent copies of a handsome Christmas card to all the principal post-offices in the world, from many of which it receives in exchange a similar greeting. In whatever manner this kindly custom began, it has now become one of the pleasantest features of the season in postal circles; and some of the most elaborate cards hail from the remotest points. "A poet at Hong Kong," says the *London Telegraph*, "distinguishes himself with a 'Post-Office Sonnet,' which is quite excellent and interesting in point of theme and workmanship. When Fiji first received the London card it grew quite rapturous, and sent back a long and eloquent letter of thanks, together with the postmaster's photograph. Next year it outdid itself by forwarding a water-color drawing of Fijian scenery. Several other postal stations have sent water-color or pen-and-ink drawings of varying degrees of originality. The London officials, however, take care to maintain their superiority in the matter of art."

According to the *Lancet*, "brain tension is not a proof of strength, but of weakness. The knit brow, straining eyes, and fixed attention of the scholar are not tokens of power, but of effort. The intellectual man with a strong mind does his brain work easily. Tension is friction, and the moment the toil of a growing brain becomes laborious it should cease. We are, unfortunately, so accustomed to see brain work done with effort that we have come to associate effort with work, and to regard tension as something tolerable, if not natural. As a matter of fact no man should ever knit his brow as he thinks, or in any way evince effort as he works. The best brain work is done easily, with a calm spirit, an equable temper and in a jaunty mood. All else is the toil of a weak or ill-developed brain straining to accomplish a task which is relatively too great for it."

The well bred lad has very few wild oats to sow.

ART COUNTERFEITS.

In no city in the world is the falsification of pictures carried on to such an extent as it is in Paris, and, strange to say, there is no law to reach the offenders. There is now sleeping in the Senate a law for the protection of artistic property, but when will it be voted? Probably not until several of the senators find they have Trouilleberts instead of Corots in their collections. The Trouillebert-Corot case has not yet been settled; the officers of justice have not yet been able to lay their hands on the person who substituted Corot's name on the picture bought by M. Alexandre Dumas as a real Corot, but which in reality was a Trouillebert, before we have another case of the same kind. A few days ago a sale of pictures was announced to take place at the hotel Drouot. The list included the names of Corot, Rousseau, Diaz, Jack, Vallon, Charles Daubigny and others. M. Daubigny's son, Karl, having some doubts about the pictures attributed to his father, went to the Hotel Drouot, accompanied by two experts, and made an examination of the tableaux. The result was that out of eight pictures claimed to be painted by Charles Daubigny only one was found to be genuine. M. Karl Daubigny immediately made known his discoveries to the government prosecuting officer, and orders were at once given to prevent the sale. The organizer of this sale is a M. Garnier, a picture dealer. He tries to exculpate himself by saying that the words "attributed to" had been inadvertently omitted from the catalogue, which is a pretty lame excuse. The number of caoûtes that are sold each year to unsuspecting "amateurs" by reason of this "attributed to" is larger than most persons suppose. Corot and Daubigny are not the only names counterfeited. False Diazes are sold by the dozen here every twelve-month, and nobody seems to have thought it worth while to bestir himself to bring about a change in the existing legislation. M. Daubigny has brought an action against the organizer of the sale, but unfortunately there is no precise law against counterfeits in artistic work. There is a law which protects manufacturers' names, but none which applies to artists. In the new bill now before the Senate there is a clause which punishes by an imprisonment of one to five years and a fine of 16 francs to 5,000 francs any person guilty of using the name of an artist or putting the name of an artist on a work not his own or fraudulently imitating a signature or sign adopted by any artist. The effect of M. Karl Daubigny's vigorous action may be to stir up the French legislators and cause them to pass the bill now before the Senate. The traffic in false pictures is one of the most audacious of the many queer industries carried on here, and it is high time a heavy hand was laid upon it.—*Paris Letter in New York Times*.

CHILD'S MONEY-BANK.

This is a beautiful conceit, and certain to delightfully mystify any child seeing it, especially any one owning it. It consists of a small box, shapely and ornamented, with a glass front. In the interior are two small mirrors, placed angularly, so that their ends meet and join at the rear of the box. There is a "money-hole" in the top of the box, and on the bottom is a picture or other ornamentation. Drop in a penny, and on looking into the box through the front glass, it will be found that the angular mirrors reflect and fract the rays so that the money will appear many times multiplied, together with the picture on the bottom. The effect is amusing to old and young.

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD

Being Triple Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

SUPERB VALENTINES FOR 1884.

PURE and chaste in sentiment, the combined work of our best American artistic and literary talent, our line of Valentines for 1884 cannot fail to receive the support of the most refined class of buyers.

We have been guided in their preparation by the success in former years, and by the expressed wants of the trade.

The following artists, among others, are represented:

MISS L. B. HUMPHREY,

MRS. O. E. WHITNEY,

MISS ROSINA EMMET,

MISS L. B. COMINS,

MISS ALICE W. ADAMS,

F. S. CHURCH,

HARRY BEARD,

C. Y. TURNER,

H. GIACOMELLI, of Paris.

F. SCHUYLER MATHEWS.

A varied assortment of Valentines by the above-named artists is offered in plain form, and single and double silk fringed.

ENVELOPES furnished with almost all our Valentines, without extra charge.

BACKS.—We again beg to call attention to the elegantly-designed backs, which are a special feature in our cards.

SATIN PRINTS.

Besides a number of FLORAL DESIGNS mounted in a variety of novel styles, special attention is called to our finest production in this line,

THE "LION IN LOVE" VALENTINE.

This is a rich satin print, on an elegant fancy plush mount. The design is after F. S. CHURCH's important work of above name. The poetry is by J. V. CHENEY. The picture is of the greatest artistic merit, and, on its elegant mount, forms, what we think, one of the most unique, artistic and sumptuous St. Valentine Souvenirs ever offered to the public.

Retail Price, in a neat suitable box, \$10.00.

DESCRIPTIVE PRICE LISTS OF OUR VALENTINES ARE NOW READY.

Besides our Valentines, we call attention to our NEW BIRTHDAY CARDS, including SATIN ART PRINTS, NEW SCRIPTURE TEXT CARDS, NEW COPIES FOR PAINTING, &c.

Our line of EASTER CARDS and EASTER NOVELTIES will shortly be announced.

KEYSTONE FASTENER.

A new tool for setting wire paper fasteners is illustrated. Its size is intermediate of the "Novelty" and the "Original" fasteners, and

it is intended for desk use. The driver is made a permanent attachment to the base, the whole being finished in solid nickel-plate and polished. The tool is provided with an eye for the pur-

pose of hanging it up, and has also screw holes to permit its attachment to the desk, if desired. R. R. Watson is offering it.

NEW PATENTS.

No. 286,572. Candle-Holder for Christmas Trees.—Frederick Arzt, New York, N. Y.

No. 286,583. Combination Game Box.—John W. Boteler, Washington, D. C.

A combination game box for containing a cribbage board, a checker, chess or backgammon board, playing cards, chips, dice and dice boxes, checkers, chessmen, and cribbage pins.

No. 286,615. Crayon or Lead Holder.—Henry C. Hunt, Newark, N. J., assignor of one-half to A. J. Halsey, same place.

A lead or crayon holder, composed of a single tube or case, adapted to contain a lead or crayon, a lead-clamping device or clasp arranged to slide externally upon the tube or case and to automatically clasp, by its own energy, the lead or crayon, and the spring coiled around the outside of the tube and adapted to act in conjunction therewith, and with the clasp to hold the lead or crayon in position when in use.

No. 286,642. Picture Card.—Charles Schwartz, Brooklyn, N. Y., assignor of one-half to John E. Linde, Hoboken, N. J.

No. 286,650. Combination Pocket Case.—Albert L. Talcott, Boston, Mass., assignor to Frederic Robinson, same place.

No. 286,677. Copying and Printing Press.—Frank D. Belknap, Wooster, Ohio.

No. 286,689. Printing Press.—Thomas B. Dooley, Boston, Mass., assignor to John Souther, same place.

No. 286,693. Method of Producing Paper Ornaments.—Joseph Fried, Chicago, Ill.

No. 286,694. Bookbinding.—Landon R. Goodwin, New York, N. Y., assignor to the Adjustable Cover Comp. ny, same place.

No. 286,703. Pocket Inkstand.—Olof Jansson, West Sweden, Wis.

No. 286,757. Play-Bill Holder.—Philip J. Worn and Philip A. O. Kober, Philadelphia, Pa.

No. 286,814. Printing Press.—John T. Hawkins, Taunton, Mass.

No. 286,831. Electrotype Plate.—Stephen S. Hoe, Tarrytown, N. Y.

An improvement in the art of backing electrotype plates which consists in providing the channels at the back of the column-rules with lines of tin or similar metal previous to the application of the backing.

No. 286,834. Type-writer.—Edward E. Horton, Toronto, Ontario, Canada.

In a type-writing machine, a surface for receiving the blow from the type-bars carried by a movable paper-carriage with its face at an angle to the horizontal plane of the machine and in a plane parallel with that of the arc or arcs of a circle or circles to which the type-bars are pivoted, said arc or arcs being also at an angle to the horizontal plane of the machine.

No. 286,868. Game Apparatus.—Charles S. Thompson, Philadelphia, Pa., assignor of one-half to John Wanamaker, same place.

A game apparatus in which the following elements are combined, namely: first, a table in the surface of which are a number of pockets; second, a chamber below the table for containing a number of balls; and, third, devices whereby the balls may be expelled from the reservoir and thrown upward above the table, so as to fall thereon.

No. 286,881. Envelope.—James H. Weaver, Chicago, Ill.

No. 286,884. Hand-Stamp.—Walter D. Wesson, Providence, R. I.

No. 286,893. Can for Ink.—Wm. A. Auble, Chicago, Ill., assignor to Levi H. Thomas, same place.

No. 286,896. Paper Bag.—Geo. O. Blowers, Canajoharie, N. Y.

No. 286,979. Printer's Imposing-Stone.—David W. Whitaker, Roxborough, N. C., assignor of one-half to Robert B. Boone, same place.

LAMPS.

Seventeen houses out of twenty are furnished with chandeliers, the other three using side brackets. Either way, one can have beautiful articles in oxidized silver and old-gold Persian devices worked to the last extremity of fineness. Enamel is also used with exceeding taste. The hammered metals are in every shape, but are more common. The burners generally simulate candles in the drawing-room, and can be made to give light equal to other burners. Shades are of cut glass, producing a delightful sparkle for a parlor, or for a library of soft pink or green glass blown in waves of increasing or diminishing color. Of these last there was only one—a sample—as yet in America. For halls beautiful lamps are made. A large one had four of the glass tiles set in broken brick, and when lighted within produced a soft richness quite indescribable. Another had a new moon, with the points meeting, made of jeweled glass, inclosing a sheet of plain glass with a large enameled spider and his web in the middle. Since a good housewife would not allow a real spider, why should she an artificial one? Brass and silver lamps are much used in libraries and sitting-rooms, and are made very handsome and in very graceful shapes, at from \$25 to \$100. The Pompeian shape is going out, and reservoir lamps take

their place. These can have wicks inserted which last a lifetime, and give twice the light of an Argand burner.

CUTTING METAL.

Mme. De Long, it is announced, is about to introduce into England the metal-cutting machinery of her invention which has for some time been in use in France. She first conceived the idea of her wonderful apparatus nearly twenty years ago, when paralysis of the right arm forced her to abandon the trade of a jewel worker. She has now perfected machinery, worked by steam-power, which cuts with the utmost precision the hardest and softest metals, in any design. By it she can cut out a gold lace pin or a steel castle portcullis from the solid metal, without any molding or filing. And all her apparatus and operations are of the simplest description. She divides her industry into four general branches. The first is the production of gates, doors, balcony fronts and other architectural metal work, without casting. She has cut plates of brass a foot thick into lattice work at a single operation. The second branch is the making of lattice metal work filled in with glass, to supersede the ordinary leaden framework for church and other ornamental windows. The third branch comprises the inlaying of plush and ebony jewel cases, cabinets, &c., with red and yellow copper, silver, steel and other metals. The fourth department comprises the working of picture frames, baskets, crests, monograms, &c., turning them out of the solid metal fully finished without a single operation not performed by the steam-driven machinery. In recognition of her services to art and industry, Mme. De Long received in 1867 two medals at the Paris Exposition, the great gold medal at the Paris Exposition of 1878, the gold medal of the Paris Artistic Exposition of 1880, numerous other gold and silver medals, and, finally, the first laureate crown ever offered to one of her sex by the Society of French Architects in Paris.

An interesting collection of articles, designed for the Calcutta Exhibition, and manufactured in Webster's aluminium metal, was recently shown in London. The production of this metal is an entirely new industry, the process of manufacture having been perfected by Mr. James Webster. Works have been started near Birmingham, where the output in ingots, plates and wire is about twenty tons weekly. This metal combines strength and lightness with elegance of appearance and general utility. The source of the alumina is potash alum, which is treated in a special but simple and rapid manner, the result being a metal which will stand a very high tensile strain, and is not subject to oxidation. The metal is of two kinds, white and yellow, the former being used for cutlery and other table requisites where silver and plated goods are now employed, and for every kind of metallic fittings, lamps, harness and carriage furniture, chains, wire and wire ropes, and in fact for every purpose where a non-oxidizing bright surface is a desideratum, strength also being kept in view. The yellow metal is adapted and used for guns, screw propellers, engine bearings, tubes and all the various details of machinery where gun-metal and other alloys are now used.

Experience shows that success is due less to ability than to zeal. The winner is he who gives himself to his work, body and soul.—Charles Buxton.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

PATENTED.

REFERENCES: { Gibson, Miller & Richardson, Omaha,
Acme Stationery and Paper Co., N. Y.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles buckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

CELEBRATED "CLIMAX" BLOTTING PAPER,

The "CLIMAX" possesses the following advantages:

- 1st, *Full weight*, as marked in figures on bundle.
- 2d, Absolute uniformity as to quality and color.
- 3d, It will not harden with age.
- 4th, It is of absolutely *unrivaled* quality.
- 5th, Cheapness, in view of its excellence.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Richard Wilder, paper-stock dealer, Philadelphia, Pa., is dead.

Sayer Brothers, stationers, Ottawa, Ont., are closing up their business.

J. D. King, publisher of the *Transcript*, Paris, Ont., has been burned out.

George M. Downes, of the Downes News Company, New Haven, Conn., is dead.

E. G. Zeiro & Co., publishers *L'Independent*, San Francisco, Cal., have been attached.

Thomas F. Peterson, bookseller and stationer, Baltimore, Md., is closing out at auction.

Martin N. Nixon, dealer in paper bags, &c., Davenport, Ia., has sold out to Smith & Hughes.

Charles M. Thacher, manufacturer of picture frames, Boston, Mass., has sustained a loss from fire.

W. H. Scott & Brother, publishers of the *Valley Record*, Monongahela City, Pa., have sold out.

Shankland & Brooks, publishers, Jamestown, N. Y., have dissolved partnership. The business is continued by Shankland.

Robert W. Macgowan, printer, New York City, advertises that he does business under the style of Macgowan & Slipper.

A dissolution has taken place in the firm of Alvey & Jackson, publishers, Watrous, N. M., J. M. Alvey succeeding the firm.

Powers & Barksdale, publishers of the *Clarion*, Jackson, Miss., have recently dissolved partnership. J. L. Powers succeeds to the business.

Adams & Terry, paper manufacturers, &c., Monroe, Mich., have been succeeded by the Monroe Manufacturing Company (incorporated).

James G. Hyde, New York, has got out four new designs in show cards, of which complete sample sets can be had on application. He will also send sample sheet of New Year cards, &c.

The Dunham patent combination tag and envelope is finding favor wherever it is introduced, and orders are enlarged and duplicated. It can be had of Jos. T. Dunham & Co., who will send samples on application.

Van Antwerp, Bragg & Co., publishers, Cincinnati, Ohio, have lately brought out an entire new line of school books. It is said at the New York branch of the firm that the company is meeting with success in the introduction of these books.

The Plimpton Manufacturing Company, Hartford, Conn., is making a patent gummed envelope, illustrated in an advertisement in another column. This envelope is gummed in a peculiar way and the sealing flap is said to be sure to stick. It deserves the attention of the trade.

Fire broke out from some unknown cause, on Thursday evening, December 6, on the top floor of No. 33 Warren street, New York, occupied by M. J. Hearfield & Co., printers. The flames were confined to that floor: The printing firm's stock and machinery was damaged \$2,000. Brown & Sanson, stationers, have the fourth floor. They sustained a loss of \$3,500 by water. The building was damaged \$500.

The failure of B. J. Kopperl, stationer, Austin, Tex., is announced, and is considerable of a surprise to the trade. Mr. Kopperl came to New York in July and bought heavily from jobbers and leading dealers, on time. He was well known, having been in business for several years, and was thought to be sound, financially. Among the New York creditors are Boorum & Pease, \$1,000; Althof, Burgmann & Co., \$900. The firms of Koch, Sons & Co., Leroy Fairchild, A. S. Barnes & Co., and Eberhard Faber, are creditors in amounts under \$500. Kopperl stood well with business men, and was only last July rated by Bradstreet as being worth from \$10,000 to \$20,000 and credit good. The liabilities are said to be about \$34,000, with about the same amount of assets in unconvertible property. The failure is said to be due principally to ill-health with Mr. Kopperl, whose character has never been attacked. Counsel employed in Austin on behalf of the New York creditors has telegraphed that there is a probability of recovering the full amount of claims. Kopperl is on his way to New York, and is expected here in the course of two or three days.

The Bangor News Company, Bangor, Me., has had an "opening," which from local account seems to have been very attractive. This company's stock is extremely varied, and its store is a bazaar. Each visitor during the opening days received a coupon, which was exchanged for a souvenir.

The firm of E. Darrow & Co., Rochester, is the firm of which the correspondent "Genesee" made mention in his letter in last week's *STATIONER*, and the misprint must be attributed to one of those queer phantasies which the types are wont to take at odd times.

Seaman Jones, Jr., and Joseph J. Yates, composing the firm of Seaman Jones, Jr., & Co., dealers in paper hangings, at No. 1201 Broadway, New York, made an assignment on December 6 to Joseph Hardcastle, giving thirteen preferences, for \$6,726.

The shell boxes manufactured by the Globe Files Company can be had of the New York agent, C. M. Ward, 28 Bond street. This company has also a new file for newspapers, which is illustrated in its advertisement in another column.

Hard & Parsons have concluded to change their base of operations. After February 1, prox., their office and salesroom will be removed from the present location in Duane street to the corner of Beekman and William streets. Their factory will be at No. 160 William street.

The Xmas number of the London *Graphic* is accompanied by two large colored plates, entitled "Mother Hubbard" and "The Order of the Bath." It can be had of the International News Company.

The right to manufacture a new form of blotter tablet is offered for sale in another column, and parties interested are invited to investigate.

Thomas Groom & Co., Boston, have issued a handsomely-printed pamphlet, giving a partial list of their varied stock of stationery goods.

The creditors of Hubley & Co., paper stock dealers, Worcester, Mass., have filed a petition to place the firm in insolvency.

J. A. Cheely, publisher, Evans, Col., has recently been burned out. Loss, \$3,000; partly insured.

George Coleman, bookbinder, Boston, Mass., has been damaged by fire.

The *Silverton Democrat*, Silverton, Col., has been sold at trustee's sale.

Stephen G. Mapes, wholesale dealer in toys, &c., New York City, is dead.

H. O. Hoffmann, publisher of the *Independent*, Bloomington, Ill., has sold out.

An assignment has been made by Miller & Umbdenstock, printers, Chicago, Ill.

The fancy-leather works of James W. Vaters, Pittsburg, Pa., have been closed by the sheriff.

The stock, &c., of Bennett & Co., stationers, Danville, Quebec, is advertised for sale by tender.

C. C. Hubbard, publisher of the *Sunday Globe*, Hartford, Conn., has sold out to Allen Willey.

Henry Levy & Sons are very busy this week and expect to do a rushing business for the remainder of the year.

The *Lynchburg Sentinel*, published by W. A. Frost, Lynchburg, Tenn., has been burned out; loss, \$1,200; insured for \$600.

Carter, Dinsmore & Co. were lately awarded, by the Louisville Exposition, the highest prize for the best inks and mucilage.

A. Pelkey, who bought out the Rockville news company, Rockville, Conn., a month ago, has been unable to stand the confinement of the business, and has sold it to N. A. Crane, who took possession on Thursday last.

The firm of Willy Wallach has recently removed from No. 78 Chambers street to 33 Warren street. The firm has discontinued supplying the retail trade direct, and will henceforth deal exclusively with the wholesale and the jobbing trade.

John B. Davids & Co. will have ready for the trade, on January 1, next, a superior jet-black writing fluid. This ink will be the result of much careful experimenting. If equal to the other productions of this firm it will be a thing that the trade will be eager to handle.

The entire stock of George W. Arms & Co., Philadelphia, was sold at auction last Monday, for the benefit of their creditors. The sale was not very satisfactory, as the prices were very low. The figures will be given in full in the next issue of *THE AMERICAN STATIONER*.

A sensation was created in Montreal on December 10, when a winding-up order on Mr. Riddell, secretary of the New York *Graphic* Company, with its head office at Montreal, was served in a suit brought by D. L. Borne, of New York; C. E. Brown, of Chicago; M. H. St. John, of Orange, N. J.; John Stover and C. T. Davenport of New York. These parties are creditors to the extent of \$91,000. The petitioners allege that the company is insolvent and unable to pay its debts; that its assets are only \$40,000, while the liabilities are \$779,500, leaving a deficiency of \$739,500.

The Russia Cement Company, Gloucester, Mass., which manufactures Le Page's liquid fish glue and mucilage, has deservedly won another victory at the Southern Exposition lately closed at Louisville, Ky., having received the highest award for the excellence of its products. Le Page's liquid glues carry off high awards whenever put into competition, and as a natural consequence of their merit they command large sales. Since these glues were brought into notoriety at the Fisheries Exhibition, at London, England, and were awarded the gold medal, their sale throughout the United Kingdom and on the continent of Europe has greatly increased. In this country there is a steadily

and constantly growing demand for Le Page's glues and mucilage.

John Willyoung, bookseller and stationer, Detroit, Mich., is dead.

Marsh & Desha, publishers, Chillicothe, Mo., have been burned out.

Charles W. Beach, publisher of *The Miner*, Prescott, Ariz., has sold out.

S. H. Farley, publisher, Waldron, Ark., recently sold out his business.

The Continental Printing Company, St. Louis, Mo., has been damaged by fire.

Edward Biggins, printer and publisher, Sault Ste. Marie, Ont., has been burned out.

The Standard Printing and Publishing Company, Rapid City, Man., has sold out to D. McCa. Henderson.

Purchase & Carey, printers, Philadelphia, Pa., have dissolved partnership, the business being continued by J. B. Carey.

Wildman & Clark Brothers, printers, Danbury, Conn., have dissolved partnership, Wildman & Clark succeeding the late firm.

The Brooklyn Board of Education has passed a resolution to make books and school stationery free to pupils of the public schools after January 1 next.

A stock company with \$20,000 capital is talked of at Bath, Me., for the manufacture of patent letter paper that may be mailed independent of envelopes.

A dissolution has taken place in the firm of Schall & Vanderbeck, printers and lithographers, Philadelphia, Pa. George H. Vanderbeck succeeds to the business.

A fire broke out on the 8th inst., in the five-story building Nos. 46 to 50 Federal street, Boston, owned by B. Boardman & Co. The principal occupant was the Standard Bag Company, which had a large amount of raw material stored in the basement, and an equal amount of manufactured stock in the fourth story. It also occupied the fifth floor for manufacturing purposes. The stock and machinery on the two upper floors were entirely ruined, and that in the basement is worth but little. The firm, it is stated, carried about \$200,000 worth of stock, and its machinery was valued \$50,000, and had a total insurance of \$37,500, which is probably the entire value of the plant. The total loss of the company is said to be about \$75,000. E. G. Robinson's stock of paper, twine, &c., was damaged to the amount of \$6,000, by water; insurance, \$3,000. The Exeter Machine Company lost \$1,500. C. M. Thatcher, second floor moldings and picture frames, lost his entire stock, valued at \$5,000; insurance, \$2,000. R. F. Lawrence & Co., printers and stationers, suffered a loss of \$10,000; insured for \$3,000. George Coleman, bookbinder, lost \$10,000, which is the full value of stock and machinery; insured for \$3,500. The building was damaged to the extent of \$30,000.

The novelties offered by the New York Silicate Book Slate Company should not be overlooked by the trade. The new blackboard and easel for children is meeting with an extensive sale. The design is very attractive and takes with children of all ages. The company manufactures two sizes—No. 1 is 16x25 inches square, 3 feet high, and is made of ash and provided with a good silicate blackboard, which will last for years. No. 2 is 19x24 inches square, and 4 feet high. These are the best silicate blackboards made. The prices are low, being only \$1 and \$1.50.

"A Week Spent in a Glass Pond," by Juliana Horatia Ewing, very finely illustrated in colors by R. Andre, is the story of an aquarium, or an attempt to make one, by a little boy and girl, and it purports to be told by one of the most interesting of the specimens collected—namely, the great water beetle. The book is a very pretty little quarto and has a much greater value than most books of its class. It is published by R. Worthington.

W. M. Christy's Sons, Philadelphia, report a very good trade for their Waggener's improved trial balance books. The large amount of orders which they have received lately have compelled them to increase their facilities for manufacture, and they have procured one of Hickox's latest improved ruling machines, which is now working, and enables them to fill their orders.

It has been reported to Turner, Harrison & Co., Philadelphia, that some one is infringing on their trade-mark of the "Moheta" pen. They offer a reward of \$100 for the detection of the infringer, as will be seen in an advertisement elsewhere.

Leroy W. Fairchild, as usual, is very busy this week. The various novelties in gold pencils, charms, whistles, &c., manufactured by Mr. Fairchild, are things that no enterprising tradesman can do without.

Alvah Bushnell, Philadelphia, is said to be meeting with success with his easel calendars for 1884. He will supply the trade at low prices for assorted choice designs in lots of 500.

W. H. Speaker, late part owner of the *James-town Capital*, Jamestown, Dak., has sold his interest in that paper to M. J. S. Saul. Hereafter the paper will be run by Burke & Saul.

John B. Jeffrey, printer, &c., Chicago, Ill., has been burned out.

Tanzey & Elliott, publishers, Austin Tex., have dissolved partnership. P. H. Tanzey continues the business.

The Pneumatic Copying Company has removed from 628 Broadway. The janitor in charge of that building could not tell where the company had removed to.

A fire broke out in the Drake Block, St. Paul, Minn., on Wednesday morning, and the buildings were destroyed. Among others who suffered loss was the T. S. White Stationery Company.

"The Air We Breathe and Ventilation," is the second number of a series of little works prepared by Dr. Henry A. Mott, Jr., New York. This is a hygienic treatise which will commend itself to the attention of everyone interested in the protection of health. It is profusely illustrated.

Stationers who desire to carry a full line of staple goods should see that they are supplied with the popular calendar pads manufactured by E. P. Coby & Co. These pads are printed in two colors, on fine paper, and with or without the purchaser's name. They also can be had in sheets or mounted complete.

Students of hygienic living may draw suggestions from Susanna W. Dodds', M. D., cook-book, "Health in the Household." There has been a great run on cook-books of late years, and in this instance the author sets forth the principles of good dieting and gives explanations which show that she is earnest in her ideas of what practical and healthful cookery should be. The book is published by Fowler & Wells, New York.

The Globe Files Company has obtained another recognition of the excellence of its productions. It came in the shape of a certificate from the Louisville Exposition, setting forth the superiority of the Globe files. The Globe file cabinet received especial attention from the judges. This is the third award that this company has received within the past year or two. In 1882 it carried off the palm at Cincinnati, and was afterward successful in competing for the prize at the Milwaukee Exposition in 1883, and recently it scored the victory at Louisville.

CULVER, PAGE, HOYNE & CO.

The adjourned meeting of the creditors of Culver, Page, Hoyne & Co., Chicago, was held on Thursday afternoon last. Among the parties present were representatives of Hastings, Todd & Co., L. Prang & Co., H. Griffin & Sons, Turner, Harrison & Co., Mabie, Todd & Bard, Keuffel & Esser, Wyckoff, Seamans & Benedict. The meeting was presided over by Mr. Pratt.

Mr. Young, chairman of the committee appointed at the last meeting to confer with the representatives of Culver, Page, Hoyne & Co. and their attorney, made a verbal report embodying a statement of the condition of affairs similar to that presented at the previous meeting. In other words, that the liabilities were \$753,000, of which about \$155,000 were for merchandise debts. The liquidation of the judgment notes out of the proceeds to John Morris still left \$312,000 of indebtedness entirely unprovided for. All that was left over and above the amount used to satisfy the judgment notes was between \$10,000 and \$15,000. Mr. Young stated that G. M. Culver, of Culver & Co., had made a proposition to buy all of the outstanding claims against the corporation at 12½ cents on the dollar. Mr. Horton, the representative of Mr. Hoyne, had agreed to accept this proposition, provided that creditors to the amount of \$220,000 would sign an agreement to the same effect. Mr. Young stated that it was the unanimous opinion of the committee that 12½ cents on the dollar was all that the creditors could possibly realize out of the property, and it recommended the acceptance of that amount. A resolution was passed to accept 12½ cents on the dollar. The following agreement was then drawn up, and copies of the same were directed to be sent to each creditor:

"We, the undersigned, agree to sell our respective claims to G. M. Culver upon the payment of 12½ per cent. of the value thereof, in cash, within thirty days."

The meeting then adjourned.

The creditors are said to be generally accepting the compromise offered.

PATENT-LEATHER SUBSTITUTE.

This invention has for its object the production of an article which resembles patent-leather and possesses properties superior to those existing in the substance known by this term; and the invention consists, first, in taking sheets of leather—such as are technically called "splits," or those which are formed from the sides of leather which have been subjected to the splitting process—and applying upon the surface of the same thin sheets of zylonite or a similar substance of a proper color, and which is applied by partially dissolving the surface of the zylonite, or its equivalent, by any of the well-known solvents of such substances, and then subjecting the same to pressure, as by a pair of rolls or any gradually progressing compressing surface, by which the leather and the zylonite will be united, and then partially dissolving or applying a solvent—such as collodion—upon the exterior surface of the sheet of zylonite, and progressively passing it between a pair of rolls or compressing surface in contact with a plate of glass or other similar surface, by which the exterior surface of the zylonite will be as finely polished as the surface against which it has been compressed. A convex surface beginning at the centre of the split and gradually extending out to each end, in the case of such articles as are formed from sides of leather, will be found to be the preferable method of applying the pressure.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 13, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

THE initial movement in Congress toward a general bankrupt law has been made. Among the bills introduced on Tuesday was one which is said to be quite voluminous. A section of this bill regarding involuntary bankruptcy provides that among other acts for which a debtor may be adjudged a bankrupt, any person who has stopped or suspended and not resumed payment of any of his debts made in the course of his business may be so adjudged, but a written demand to pay must be made on him by the creditor, not less than twenty days after the debt shall mature. In order to protect persons from being harassed by creditors, a clause is inserted requiring the creditor to file a bond of not less than \$500, which amount may be increased by the court upon notice that the penalty of the bond is not adequate or that the sureties are not responsible. Another important section is that relating to exemptions, which provides that in no case shall the amount expended exceed \$1,000 in value, anything in the statute of any State to the contrary notwithstanding. The bill also prohibits any creditor from voting for an assignee who is related to the bankrupt, nor shall the claims of such relatives be counted in determining the amount or number necessary to a choice of an assignee. Still another section provides that no assignee shall retain in his possession more than \$250 under a penalty of 20 per cent. interest on all sums in excess of that sum. Any person proving a false or fictitious debt shall forfeit three times the amount so proved for the benefit of the State. Under the section relating to the examination of witnesses it is provided that where a witness refuses to answer any proper question the Register may commit him as for contempt of court. The composition section provides that not less than 30 cents on the dollar shall be paid to a creditor; otherwise he is not entitled to a composition. Where security is given it must be approved of by the court, and any person proving a false or fictitious debt under this section shall be punished by a fine of not more than three times the amount so proved or by imprisonment of not more than two years, or both, thus making it a penal offense. The penal section has a new and very strict clause. It provides that any person who, in contemplation of bankruptcy, purchases any goods or chattels which have been purchased on credit and which remain unpaid for shall be punished by imprisonment for not more than three years. The words, "in contemplation of bankruptcy," are inserted to meet the decision in the well-known case of the United States against Fox. Registers in Bankruptcy are given power to issue orders to show cause why debtors should not be adjudged bankrupts. Without a full knowledge of the provisions of the entire bill it is impossible to form a correct opinion of its merits generally, but the features above noted seem to be sound, and if we shall be given

a law which shall be effective in preventing the contraction of debts "in contemplation of bankruptcy," the mercantile community will have a sense of relief that they will gladly experience. We are glad to note, too, that it is proposed to avoid "ten cents on the dollar" compromises. With this and all other suggestions for a bankrupt law, merchants should have considerable to do, and the convention of commercial organizations which is called for next month can do good work in promoting the success of the measure, if it will provide the material aid necessary for keeping the question alive.

ROUNDBOUTS.

BY THE TRADE LOUNGER.

The busy scene presented just now on our principal streets is very pleasing. The shop windows are surrounded, stores are thronged and the itinerant venders of toys and cheap Christmas novelties give an air of excitement which shows that it is expected to keep holiday. And the promise is apparently good, for people seem to be anxious to buy. I have remarked a surprisingly large number of cheap novelties, and many things seem to me to be offered at low prices. Yet there are those who are too poor to buy even the cheapest and most inconsiderable gifts. People will exclaim: "God help the poor!" It will be more practical to try and help them ourselves.

* * * *

Walking up Broadway is fine amusement at almost any time. It is more particularly so now. Fourteenth street, too, must be a pandemonium of trade. One dealer on Broadway has a window full of mechanical figures, dressed up in the extravagant French costumes of 1617.

* * * *

Among some of the taking novelties are miniature shape goods. What a run there has been on shape novelties! Of course, the readers of THE STATIONER can trace such devices to their fountain heads and sources of inspiration.

* * * *

In one house the show cases are covered over and the firm jealously guards their contents. The idea is to keep prying eyes from studying samples and securing information whereby imitations may be created. These show cases are henceforth to be locked and no one will be permitted to open them other than one member of the firm. The goods must be "treasure galore." This incident reminds me of the dungeon wherein a William street house keeps its samples.

* * * *

Not long ago one of your correspondents asked if a transfer pulled some years ago from a copper plate could be transferred to stone. Apropos to this, it is announced that Mr. Lott, of the firm of Lott & Gerber, Vienna, has patented a process for the preparation of transfers from typographic and lithographic printing, to be made on cheap and common paper, which may be kept for years, and then put in working order within a few minutes as well on stone as on zinc, glass, &c. These transfers will serve as well for fine chromo as for common black work, and the process has been already, for a length of time, in use in the inventor's own office and always given the most satisfactory results. As it does away with the necessity for preserving expensive stones, it is easy to guess that much may be saved by Mr.

Lott's invention. A copper-plate transfer will come under the same method.

An Ohio paper makes a rather peculiar, if not startling announcement, which reads as follows: "Holiness envelopes.—We have envelopes printed on both sides with Scripture texts and other impressive reading. They are pronounced very nice by those who have seen them, and just the thing to use in social or religious correspondence. They are good size and firm texture. White, buff, yellow, blue or pink, or assorted colors at 50 cents per hundred, or 15 cents for package of 25. Do good by using them."

Isn't that dealing out "holiness" at retail? It seems to be a queer way of seeking for trade. One can't but think of the money changers in the Temple.

A Massachusetts paper remarks upon the fact that Governor Butler uses Scotch writing paper in his correspondence. This is thought to be severe on the paper makers of the "Old Bay State," which boasts of so many fine writing mills.

Considerable is still said about dating bills ahead. If business men will keep up this injurious practice in order to compete with their rivals in trade, they must not complain if others distrust them. A man who asks for extra accommodation or who is induced to buy goods because he has longer time in which to pay for them, is a weak customer whom it would be better to avoid than encourage. There is a great deal of complaint around about this practice, and even some of those who denounce it think they must grant favors in this way. But it is all wrong.

There is only one conclusion to reach and to act upon—Don't do it.

Special Treasury Officer J. M. Wilson, having discovered that frequent consignments of satin cards were being made from abroad through the mails to dealers, with the supposed intent of escaping the duty of fifty per cent., stopped the delivery on Saturday last of 1,000 Christmas satin cards coming from Germany. They were sent to the Custom House.

ANSWERS TO CORRESPONDENTS.

D. wants address of "North Star Mills."

Ans.—We have given a reply to this inquiry before. There are two or three claimants.

Subscriber asks: Who manufactures perforated roll water-closet paper besides the Albany Company?

Ans.—We don't know. Think that the Albany company holds a patent on it.

C. G. wants the address of the *Decorator and Furnisher*.

Ans.—No. 231 Broadway, New York city.

Market Review.

OFFICE OF THE AMERICAN STATIONER, }
WEDNESDAY, December 12, 1883. }

THE MONEY MARKET.—There is no change in the money market; the supply of idle money increases, and on security that is undoubted it is obtainable at extremely low rates. The stock market continues in a chronic condition of inactivity, and lacks tone and strength. For the better class of railway mortgages there is a good investment demand, with liberal purchases and a steady market. Government bonds continue strong, with a fair demand.

Sterling exchange is again lower, as are also the rates for Continental bills.

THE PAPER MARKET.—Although dull trade is naturally looked for during the last month of the year, business appears to be more than usually quiet in the centres of the paper trade, or among the commission dealers who handle the bulk of the product. There is more dissatisfaction than ever expressed at the slender margins of profit; but, considering that the production has been uninterrupted for nearly two months, values have held their own remarkably well, the chances being in favor of their continuing in this position for some time to come. The consumption of news has gained a little on the demand lately, it is claimed, through the increased circulation of most of the daily New York papers which have reduced their prices.

THE STATIONERY MARKET.—Trade is hardly as active as was indicated last week, orders for staple goods having fallen off considerably. This is due to two causes—the end of the season, when a lull may be expected, and the closeness of the holidays, when dealers usually drop staple articles like hot coals, and grab after fancy goods. In the envelope trade practically nothing is doing and prices have fallen to such an extent as to yield scarcely any profit to the producer. The trade in lead pencils, steel pens, inks, &c., is about over for the season. Blank books are doing fairly. Holiday goods of all descriptions are quickly taken and prices are firm. In plush goods considerable activity is shown, and shipments are still made to distant points. Christmas cards are in good demand, and notwithstanding the overstocked condition of the market, the prospects are that dealers will find their stocks exhausted before December 31. The demand for toys and juvenile books is very great, and the numerous novelties in this line give the retailer much encouragement in handling these goods. The trade in gold pens, watch charms, novelties in gold pencils, &c., also shows considerable activity, dealers being pressed to fill orders. The holiday trade generally is experiencing quite a boom.

STENOGRAPHIC MACHINE.

A new stenographic machine, though well adapted for rapid writing by persons who can see, is more especially intended for the use of the blind.

The alphabet employed is composed of different combinations of eight dots, with a central or index dot, around which the eight dots are arranged in the form of a hollow square, which dots are impressed into the paper, resting on a yielding support, by as many small impression rods or keys, forming the characters in relief on the back of the paper, so that the matter written may be read by the sense of touch or by the sense of sight, as the case may be.

The paper in which the impressions are to be formed by the impression-rods is cut in a long narrow strip and wound on a reel, and from this reel the strip of paper is fed immediately under the pin-points of the impression rods.

The eight letters of the alphabet, a e i o t s n h, which occur most frequently in ordinary composition, are represented by a single dot, along with the index-dot, and the eight next in point of frequency are formed each with two dots, along with the index-dot, the two outside dots being formed by two rods or keys most convenient to each other. The other ten letters of the alphabet and the numerals may all be represented by varying the dots according to the letters required, and without using more than two together with the index-dot. It will thus be seen that the whole alphabet requires not more than seventy impressions, and the eight rods or keys used in producing them are so closely connected that one hand of the writer may cover them all, so that it will be about as easy to press down two keys at a time as one, and in case four dot characters are used but little more effort will be required to form them.

When this machine is to be used by persons who can see, a receiving or paying-off roller will be properly journaled in the frame of the machine, to which will be attached an inking-ribbon which will run in close contact with the paper, and between it and the pin-point of the keys or rods, so that the dots will be printed upon the upper surface of the paper, and the movement of the paper will be reversed—that is, it will move from left to right.

When used by the blind, the machine will be arranged to cause the paper to move from right to left, and the writer will reverse the combination of each group of dots which form the letters of the alphabet, so that upon reading the raised characters from the back of the paper the combinations will come in the proper shape.

It will be seen from the above description that about one-third of the letters used in ordinary composition will be represented by two dots—the index-dot and one other—and that not over two-thirds will require three dots—two with the index-dot—and it will be understood that four dot characters may be used, if desired, for indicating punctuation-marks, and that various combinations may be used to indicate whole words, if desired.

Instead of using a long narrow strip of paper to receive the writing, the machine might be provided with a revolving and longitudinally-moving roller, so that the writing might be done on sheets of paper, if desired.

The present hour is always wealthiest when it is poorer than the future ones, as that is the pleasantest site which affords the pleasantest prospect.—Thorne.

THE BOOKSELLERS AND STATIONERS' PROVIDENT ASSOCIATION.

At the last monthly meeting of the Board of Trustees, held at Cassell & Co.'s, 739 and 741 Broadway, New York, the claim of Mrs. L. Miller, beneficiary of the late John Miller, a member of the association, who died November 18, 1883, was presented and ordered paid. The amount is \$520. Assessment No. 13 will be issued by the secretary on the 26th inst.

The secretary announced, as required by the by-laws, that he had erased from the roll the names of sixteen members who failed to pay Assessment No. 12 within the specified time, repeated efforts having been made to reach them without success. It is very necessary for every member in changing his post-office address to promptly notify the secretary of the same.

The following named applicants were elected members:

Geo. W. Graeff, Jr., Phila.	John Glenn, Phila.
Alex. B. Walsh, Baltimore.	Frank W. Hard, New Y ^k
H. T. Rowley, Pittsburgh.	Melvin T. Hard, "
R. Walter Bell, New York.	Wm. A. Hard, "
David C. Bowne, "	Richard Hoepner, "
Jacob Doornbas, "	Wm. T. Kellogg, "
Henry Blackwell, "	J. H. McInnes, "
Harry J. Calvert, "	Lemuel C. Mygatt, "
Francis E. Fitch, "	Ernest Renston, "
Wm. Gramm, "	Herman Schwenke, "
W. H. Sears, "	S. Geo. Wilkinson, "

W. C. Babcock was unanimously elected an Assistant Vice-President for Boston, Mass., and Geo. J. Leary was elected Assistant to the Secretary.

Total membership, 543, of which number 148 have been elected since June last.

J. A. HOLDEN,
Secretary.

SUNDERLIN, TABER & CO.

WATKINS, N. Y.

ENVELOPE MACHINE.

This is an improvement in envelope machines for gumming and folding envelope blanks which have been previously cut to the proper shape, said blanks being placed in a pile upon a suitable feed-table to have one flap gummed while thereon, to be taken thence to the opposite end of the machine, where the gumming of the second flap is performed, and then folded and delivered in complete condition for packing in boxes in the usual manner.

One feature of the invention consists in the combination of horizontal and vertically-operating gummers located at opposite ends of the machine, and acting one after the other upon the blank, to apply the gum thereto upon opposite edges thereof, and for insuring the application

of sufficient gum to the reciprocating gum-roller.

Another feature consists in a novel combination of pick-up and separator devices, and of stop devices to prevent any backward motion of the blanks after having once been started toward the folding-box.

The picking-up, separating, and gumming mechanism of this machine embraces a train or

series of devices which co-operate to remove the envelope blank from the pile thereof upon the feed-table at one end of the machine to the folding-box at the opposite end thereof, and to properly apply the gum to both flaps of the blank in such a way that the latter becomes a completed envelope by such rapid manipulation that no time is lost, and the product of the machine is greatly increased.

A REWARD OF \$100.

WE are informed that some unscrupulous persons are using and branding Pens with our Trade Mark, the word "MOHETA." We again caution all persons against using the same on Writing Pens, it being adopted by the undersigned, and registered in the Patent Office at Washington, D. C., March 25, 1879, and re-registered June 6, 1882. We therefore offer a Reward of \$100 (One Hundred Dollars) to any person that will give us such information as will lead to the detection of any person or persons infringing on the word "MOHETA," as above stated.

December 13, 1883.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platinum alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

LUSTRA PAINTING ON FABRICS.

This art having now passed through the test of public approval may be said to have taken its place among the permanent pursuits of the tasteful. It is like nothing whatever that has preceded it, but it has been said, among other things, to remind one somewhat of old Spanish decorated leather, of ancient illuminated manuscripts, of cloisonné enamel, of Gubbio ware, and, generally, of monkish work and the work of ladies of the mediæval period. It has, moreover, been applied to modern design, to which it gives a peculiar character; refining, and at the time imparting to it a tinge of quaintness. The operation is simple. A design having been chosen, it is transferred, by one of the useful methods, to any fabric—furniture velvet, satin, linen, or cloth. This, as the operator chooses, may or may not have an outline of needlework. The paints are dry powders with a metal basis, which gives the finished work, when viewed in different positions, as decorations always must be, the reflections and varied play of light which metallic surfaces always lend themselves to. There is no one of these colors of precisely the same tone as any artist's color: they have a character distinctly their own and include a very considerable range—greens, blues, reds, browns, golds, purples, silver, yellows, lilac. A little of the color is tipped out into a well-shaped china palette, a little of the prepared liquid medium is added, a stir is given with the brush, and it is ready to lay on. How it looks when it is laid on depends of course greatly on the taste, feeling and discrimination of the painter; the greater the knowledge and skill, the higher the nature of the result in most cases. "In most cases," because this art lays claim, and does so genuinely, to what no other art ever professed to do, namely, that the wholly uninstructed can, merely by the use of their own natural senses, produce results which are not only highly respectable, but will very often successfully compete with the work of a skilled painter. And it really may be regarded as a boon to society that when called upon, as we all often are, to praise our amateur friends' efforts, we are able to say honestly without wrenching our consciences, that they have really produced a handsome piece of work. To accomplish this, however, the amateur must start with a good design, and perhaps it would be the safer ground to go upon, if we were to say that it should not be an amateur design. Not only because there are many chances in favor of the professional design being better, but because those who are fully acquainted technically with the process know of what is capable, and are therefore more competent to produce those designs which are adapted for the purpose. There is scarcely any kind of internal decoration for which this work is not adapted. Wall hangings, curtains, mantel borders, screens, linen, church fittings and dresses can be enriched and intensified in effect by this work when the simple material would fall somewhat flat.—*The Artist.*

The National Publishing Company, Philadelphia, claims to be the only house in the United States that has all of the work necessary for binding quarto Bibles done in its own establishment, which is much larger than any other in the United States. The great advantage of this is that it enables it to give personal attention to all of the details, and as a result it is issuing what it asserts is the most elegantly finished and durably bound line of quarto Bibles in the United States.

PHOTO-PRINTS FROM TRACINGS.

The most important of all photographic tracing methods is the cyanotype of Pellet, a process depending upon the reduction of an organic ferric salt to the condition of a ferrous salt by the action of light, and so far it is analogous to the platinotype. Ferric compounds react with ferrocyanide of potassium to form Prussian blue, while ferrous compounds form a white salt with the same reagent. If the prepared paper of Pellet were introduced into the ferrocyanide developer without exposure, it would become blue all over, in consequence of the uniform deposition of Prussian blue; but should any part have been sufficiently exposed to the light the paper will remain white, owing to the complete reduction of the ferric salt to the condition of the ferrous salt. It will be thus obvious that the Pellet process will therefore reproduce a positive as a positive, and a negative as a negative, this circumstance giving it an especial value for copying tracings or drawings by direct contact printing.

The paper for the Pellet method is supplied commercially by the patentees of the process; but it is convenient for those who wish to practice it experimentally to be able to prepare their own; and the following directions will be found amply sufficient:

A solution is made of

Common salt.....	3 parts.
Perchloride of iron.....	8 "
Tartaric acid.....	4 "

in 100 parts of water, and this mixture is thickened by stirring in 25 parts of powdered gum arabic. The paper should be a well-sized and rolled paper, that known as cream-laid note paper being the most suitable. It is easy to obtain this paper in the original sheets from a wholesale stationer.

The sheet to be coated must be laid on a drawing board, and it is desirable to fasten it down by means of two pins, after which the mixture is applied as evenly as possible with a broad camel's-hair brush. This operation should be performed in a subdued light, and it is desirable to dry the paper as quickly as practicable, in order that the sensitive coating may remain as much as possible upon the surface of the paper. When quite dry, the paper may be stored away for future use.

The tracings from which copies are to be taken should consist of well-defined opaque lines upon a ground of clean tracing paper or tracing cloth, and many prefer to use India ink into which a little gamboge has been rubbed. It is unnecessary for us to say anything with respect to the kind of printing frames suitable for the process; but it may be mentioned that large frames on swing stands are required in establishments where the cyanotype process is carried on commercially, as the drawings to be copied are often as much as four feet long.

In sunlight an exposure of one or two minutes is generally sufficient, and in dull weather it may be necessary to give as long an exposure as one hour. Electric light is often used for work of this character, the time of exposure varying, according to the intensity of the light, from twenty minutes to half an hour. To develop, the print is transferred direct from the copying frame to a saturated solution of ferrocyanide of potassium, but it is not immersed in this, being merely floated upon its face downward. In order to prevent the developing solution reaching the back of the paper, it is usual to fold back the edges, so that the paper forms a kind of dish, and this dish floats boat-fashion upon the developer. In ordinary cases, the development is

complete in less than a minute; and as soon as the paper is once thoroughly wetted on the face, it may be lifted off the bath, as the solution adhering to the face will complete the development. A blue coloration of the ground indicates an insufficient exposure, while weakness of the lines indicates over-exposure.

The development being complete, the print is floated, face downward, upon clean water, and in about two minutes it is plunged into an acid bath containing 8 parts of hydrochloric acid and 3 parts of sulphuric acid, with 100 parts of water. From six to eight minutes is sufficient time to allow for the removal of redundant iron compounds by the acid, and all that is now required is to thoroughly wash the print with water and to dry it. Any blue spots may be readily removed from the finished print by means of a dilute solution of caustic potash, applied with a camel's-hair brush; one part of potash dissolved in 23 parts of water answers the purpose admirably.

When cyanotype prints are to be used in the workshop as a guide to working engineers, it is an excellent plan to saturate them with white hard varnish, as this prevents the penetration of oil and the adhesion of dirt.—*Photo. News.*

THE JAPANESE BRONZES.

In a lecture on Japanese art, G. Richter gives the following description of their bronzes:

The manufacture of bronze appears to have been brought from China, as shown by the use of the word "kara-kana" for metal. This must have been very long ago, for the earliest European visitors to Japan found bronze cannon and firearms in use there.

Japanese bronzes contain copper and tin as their chief constituents, with the addition of a little lead or zinc. In the second half of the fifteenth century, Yuido, a friend of the painter Motorsuba, exerted a great influence upon the development of the manufacture of bronze. He was master of the ornamental art and was celebrated for his great skill in making patterns and models.

The chief objects produced in Japan from bronze are figures, vases with flowers or birds, fishes, animals, dragons, censers, and incense vessels. Very great care is taken in making these, and they cast large dragons and other objects in one piece, which we have not yet succeeded in doing.

The best bronzes are those made for the temples. There is always a vase and a candlestick on the right and left of the god, in the middle is a censer, and below two lanterns or lamps. The old vases and candlesticks were not made in pairs, but single; they are now made in pairs for export. Great care was formerly expended in decorating the swords. The guard especially as well as the dagger and handle were decorated with the finest bronze. The sword guards as well as the dagger handles were made of iron inlaid with bronze.

Shakudo is a bronze of bluish-black color and contains 3 per cent. of gold. Shinbuichi is an alloy of three parts of silver to one of copper, and has a silver gray color.

The art of working iron in Japan has reached a stage that deserves mention. The richly ornamented old swords afford proofs of their skill in this art. Miyochin-Meneharu, who lived in the sixteenth century, was a master of this art. The British Museum possesses one of his works, a unique piece. It represents a sea-eagle standing on a rock with outspread wings, bristling feathers, and claws sprawled out. Every feather is wrought, and the whole is so beautiful and true

to nature that it justifies the use of the term unique.

It is not certain when the art of enameling was first introduced. It is positively asserted to have been known for centuries. In enameling objects made of copper the enamel is put on and made in the shape of a flower or arabesque, and such like. The Japanese are so skillful in this that they first use one color and make everything that is to have that color first, then another color, and so on till the work is completed. Another and more complicated process, called cloisonne, uses gold thread rubbed with the juice of an onion, and this makes it adhere to the surfaces, and the figures are afterward filled out with enamel. In both processes the article is baked in a furnace until the enamel exhibits a lustre or glossy surface. This is a sign that it is melted. The process must be conducted with great care, for if it is over-baked the enamel burns and falls off. It may also happen that in places where the enamel burns it thins, it burns. When cool the roughness is removed by polishing by hand with a fine sandstone, and finally the enamel is polished.

Still another method of enameling consists in cutting figures from the metal. The depressions are filled with enamel and then all treated in the same manner. Plates of metal with raised or smooth enamel are used for inlaying chests and wooden articles.

Both kinds of enamel are applied to porcelain in many colors. Chinese cloisonne was long considered the best, but the Japanese now excel them in the beauty and purity of the colors and the art of decoration.—*Deut. Ind. Zeitung.*

The Stationers' Board of Trade now numbers more members than ever, and is in a more solid shape financially. At the regular meeting of the Board, on Tuesday, the following-named new members were enrolled: Lyman Curtis, J. L. Shoemaker & Son and W. J. Emmerich. George A. Pease was elected a delegate to represent the Board at the national convention of commercial associations, which is to take place in Washington on January 16 next. A variety of matters of importance to business men, it is expected, will be discussed at the convention, but the chief object of the meeting will be to urge upon Congress the necessity of passing a bankrupt law.

Among the visitors in town during the past week was William R. Blodgett, a representative of Horace Dutton, of Boston. Mr. Blodgett returned from Europe on Saturday. There were also in town Howard Hinkle, of Van Antwerp, Bragg & Co., Cincinnati, Ohio; A. W. Rand, Plainfield, N. J., and L. G. Fisher, Jr. of Union Bag and Paper Company, Chicago.

The *Poultry Monthly* for December contains numerous articles of interest to farmers and poultry raisers concerning the care of poultry in winter, improving breeds, treating diseases of fowls, hints on shipping, and various other matters, besides some handsome engravings of fancy stock. The publisher is the Ferris Publishing Company, Albany, N. Y.

A. HANDSOME GIFT.

A recent addition to the treasures of the National Museum, at Washington, consists of a technological collection of Sèvres porcelain, the gift of the French government. This collection represents the manufacture of Sèvres porcelain from the raw material to the completed object the various pieces of which show every phase of the production of this famous French ceramic art. It numbers 75 lots. Eighteen of these lots consist of samples of raw material in every stage of preparation until ready for the molder's hand, fifteen, or thereabout, of molds and other vessels used in firing or baking the clay when molded in shape, and the rest of perfected objects illustrative of the various forms of decoration and colors peculiar to Sèvres porcelain. The following are the principal pieces in the latter division: Three cups and saucers at different stages of firing, showing the process of producing the beautiful blue color for which Sèvres porcelain is so noted; three cups and saucers illustrating the manner of decorating in gold; two small sea-green vases showing the production of white enamel ornamentation. Several cups and saucers, a complete tête-à-tête set, with a coffee-pot, sugar dish, &c., pieces of delicate porcelain as thin as paper, examples of reticulated ware, all more or less ornamental, ordinary plates, cups, fruit dishes and other objects complete this division. Next come the more elegant specimens. These consist of a large blue Tarentum cup with golden flowers, a Chinese vase of varied hues, a "Boizot" vase with a female figure of rare delicacy and beauty, a "Lesbos" vase of peculiar form and hue, a dark blue Florence vase, and another of a red color, all representative of the technological and artistic departments of the Sèvres establishment. In addition to the foregoing there are two examples of "biscuit" ware, one a bust of Mirabeau, and the other a statuette of "La Belle Provençale." The excellence of Sèvres porcelain is found not only in the material used but in beauty of color, design and drawing, when figures or texture are concerned, as well as in the refinement of forms and proportions in every style of work, whether plain or decorated, useful or ornamental. It is in these respects that the collection will be remarkable in educating the eye of the public. This collection, a handsome gift on the part of the French republic, will form one of the most attractive features of the United States National Museum.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—*Ex. U. S. Minister, E. B. Washburne.*

SAFETY!

"5,401,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—*New York State Engineer's Report for 1881.*

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BOX-BOARD.

It is important that box-board should be cheaply made; that it should be of a light color and possess considerable strength. Wood pulp made by simply grinding the wood will produce a board of nearly the same color as the wood itself, and therefore by using wood of a light color, pulp may be obtained of a desirable color for box-board. It will, however, if made from the varieties of wood usually employed, lack the strength which is desirable.

It is well known that if wood is steamed or boiled for a considerable time before it is ground, a pulp is obtained without much increase in expense which will make a much stronger board, but of a darker color, than that obtained from wood of the same kind not so treated.

To secure a gain in strength without the dark color and without much increase in cost, is secured by combining in the process of making the board one or more layers of dark pulp from steamed or boiled wood with one or more layers of light-colored unsteamed or unboiled wood, the latter giving a surface of desirable color, while the former gives a greater degree of strength than has heretofore been secured from ordinary ground pulp alone, not boiled or steamed. These layers are produced from the pulp, and combined together in the ordinary manner of forming thick paper or board, by combining different layers of moist pulp into one sheet upon a "cylinder machine." Where both sides are to be of light color, the layer of steamed or boiled pulp will be laid between the layers of light color; but if only one surface is to be of light color the other surface will be made by a layer of the steamed or boiled pulp.

In a lecture at Glasgow, by Professor Thompson, he stated that the magnetic pole is at present near Boothia Felix, more than a thousand miles to the west of the geographical pole. In 1657 the position of the needle showed the position of the magnetic pole to be due north. It had been eastward before that; it then began to point westward, and this westward variation continued to increase until 1816, when the maximum was attained; it has since steadily diminished, and in 1976 it will again point to the true north. Professor Thompson says that the changes which have been observed, not only in the direction but in the strength of the earth's magnetism, show that the same causes which originally magnetized the earth are still at work; and strangely enough, these changes do not occur at long intervals in the course of centuries, but are going on from day to day, from week to week, and from year to year.

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 25. NEW YORK, DECEMBER 20, 1883. WHOLE NO. 443.

Correspondence.

CINCINNATI NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, December 14, 1883.

St. Valentine's turn will come next. His heralds have been here. Signs of them are to be seen pretty much all over the city by any one looking for them. But there is time enough for valentine news later.

There is a better feeling here in all kinds of business than there was a week ago. The clearing-house exchanges here make not only a better showing for last week than for the week previous, but better than they did at the corresponding time last year.

The readers of THE STATIONER have no doubt observed that the clearing-house exchanges for all the great cities in the country made a similarly favorable showing last week.

In Christmas goods the stationers here are having excellent sales. The purchasing for Christmas began much earlier this year than last year. Good standard books, singly and in sets, are in request, and there is no end of the call for cards. Some stationers are selling beveled glass mirrors for decoration, and are receiving numerous calls for them. That is to be expected in Cincinnati, with its art reputation. Next spring we shall have here a lithographing establishment turning out mercantile stationery with designs from the best artists money can secure. At all events, those who should be in the secret are saying as much.

In the great paper warerooms on Fourth and Walnut streets there is every sign of activity and commercial prosperity just now. In fact, things look much more cheerful than they did a week ago. In front of Chatfield & Woods, on Fourth street, the piles of merchandise going in and out do not comport with dull times. Ross & Robbins are making things look lively on Walnut street below Fourth. Indoors and out, at Charles Stewart & Co.'s immense rooms, the usual bustle is to be seen. Louis Snider's Sons, in their warerooms, now doubled in dimensions, are unmistakably doing a business in keeping with this enlargement of their quarters. Snider & Hoole—why they always have had things pretty much their own way, and, as a matter of course, they do a brisk business. Now, all this doesn't look bad. The outlook was a trifle clouded a week or two ago, but really it is much clearer now.

Things are looking up among the manufacturing stationers. The presses are driving along a little more briskly than they have been doing.

While there has been a season of dullness, there has been no discouragement. Business men look upon the situation as a halt in trade for a season of rest.

John Holland has had no interruption in his trade in staple goods. His pens are going out into new territory, and they are more than holding their ground they have so triumphantly occupied.

C. F. Bradley, W. H. Pounsford & Co., George Stevens, W. B. Carpenter & Co., William Skinner, C. L. Woodrow, Wilstach, Baldwin & Co., Mallory & Webb, and, in fact, all of this class of manufacturers are having a fairly good business. It isn't up to the briskest in the brisk seasons of the past three years, but it is too good to be complained about.

PRINCE WILLIAM.

PHILADELPHIA PICKINGS.

[FROM OUR REGULAR CORRESPONDENT.]

OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street,
PHILADELPHIA, December 18, 1883.

Trade has not been so full or productive this year as last. High-priced fancy goods have suffered the most, and yet the houses J. B. Lipincott & Co. and Chas. J. Cohen have done very well and don't complain much. Louis Dreka has also had a very good market for the costliest goods.

Mr. Gilbert, manager for the Dennison Manufacturing Company, reports a very brisk trade in fine sealing-wax. The same firm has manufactured some rich plush bags for opera-glasses which sell readily. Tissue-paper in all colors is also in great demand.

G. W. Arms & Co. will have another sale at public auction of the remainder of their stock this week. After this sale is completed it will be possible to see clearly how much the creditors will receive. It is expected that after the book accounts are collected, a dividend will be made.

Nagle & Co., Philadelphia, have been more damaged by the fire than was at first reported. All of the tools and machinery of their factory have been destroyed, and the most of their stock is absolutely spoiled. In merchandise only the loss will reach between \$25,000 and \$30,000. The firm is very anxious to rebuild its factory, but is stopped by the delay of the insurance companies to adjust their losses. It is expected that they will be through by the end of this week.

T. Sinclair & Son have just published some very good chromo cards. Among them are to be noted: "What makes the Cat so Sad," one of the best they have ever produced; "The Good-bye at the Gate," a rustic scene; "The

Ship," a political satire, and a fan of rich color, made specially for programmes and dancing cards. The same firm has printed several series of blotters, which have met with great favor. It has lately added to these three series of four each, called "Messages by Mail," "Children at School," and "Musical Couundrums."

J. VIENNOT.

LOUISVILLE GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

LOUISVILLE, Ky., December 15, 1883.

Of course holiday trade is in full blast. The rush was delayed a little by the mild weather, but shoppers came out in big force the past week, and the feeling among tradesmen is now quite satisfactory. A cold wave came down on us yesterday, and indications are that a much needed period of rough weather will prevail long enough to give additional spirit to holiday buying. The Christmas card business is reported excellent for the finer grades, but the cheap varieties are not selling well.

There was not a single business failure in the city of Louisville during the month of November, according to the local report of *Bradstreet's*, and in the present month there has so far been only a limited number.

The official figures of the clearing-house exchanges in the United States for last week showed a decline of 46 per cent. as compared with the corresponding period in 1882, while the Louisville clearings were 14 per cent. greater, or 13 times the increase recorded for any other city doing an equal or larger amount of business.

The banks report money actively employed, but there is no stringency, notwithstanding the present liberal requisitions of the pork-packing, tobacco and whisky interests. Commercial paper is readily placed at 7 per cent., the standard rate, and collateral call loans at 6 per cent. Local securities are firm under a fair investment inquiry.

There are good indications that another great exposition will be held here in 1884, subscription lists having been opened with encouraging success. As to whether it paid to exhibit in the Southern Exposition just closed, it may be mentioned that out of over six hundred car-loads of exhibits which came from the North only about one hundred car-loads were sent back to the exhibitors, the five hundred car-loads were sold during the Exposition, and were sent to the purchasers in the South. All this, independent of the orders taken, and sent home to be made up and shipped direct. The results of the late Exposition to the exhibitors are

therefore certain to draw a greater volume of displays for the next one.

The Board of Trade recently adopted a resolution declining the invitation of the New York Board of Trade and Transportation to send a delegate to the Washington Convention to be held in January next to frame a national bankrupt law. Louisville financiers claim that their losses from bad debts have been smaller since the abolition of the last bankrupt law, and are content to operate under the present State insolvency laws; they remember the heavy fees and tedious delays incurred in the settlements of former cases in bankruptcy, and express but little hope of Congress passing a desirable law on this subject. Louisville is the only large city in the Union that has declared against a new bankrupt law.

The snug store of Jacob Lang, Jr., at 229 West Jefferson street, is bristling with an inviting array of holiday wares and lively with an eager throng of buyers. Besides a pleasing variety of foreign and domestic stationery and picture goods, Lang's is headquarters for wax and paper flower material, and the genial proprietor is pushing these specialties with deserved success.

Curry & Dearing, Fourth avenue, have an elegant stock of fine stationery, art prints, albums, &c.; among the popular holiday volumes this year they report Poe's "Raven," and "The Ancient Mariner," Doré's illustrations.

The holiday circular of John P. Morton & Co. announces exhibits of complete lines of seasonable specialties and novelties, including plush and leather goods, prayers and hymnals and new and choice editions of gift-books, and their extensive stores are really cheerful with the movement of people and goods. Alligator and French and Persian crocodile bindings are meeting with a ready sale. Morton's have issued the third edition of that literary and artistic success, Douglass Sherley's unique volume, "The Valley of Unrest."

Dick & Arnold, manufacturers of tobacco tags, made an assignment to Thomas E. Turner a few days ago. The liabilities are quite small.

BOURBON.

LOUISVILLE, Ky., December 14, 1883.

The Board of Trade held a special meeting last week to consider the question of petitioning Congress for the passage of a National Bankrupt law, and in that connection to take action on the invitation of the New York Board of Trade and Transportation to send delegates to a convention which will be held in Washington on January 6, 1884, to discuss the advisability of a National Bankrupt law.

Two years ago, when the same subject was up for consideration, the Louisville Board of Trade put itself on record as opposed to a law of this kind, and it was the only board in the United States that took this position, all of the other commercial organizations in the country having expressed themselves favorable to it.

At the recent meeting the following resolution was offered, strongly supported and adopted almost unanimously:

Resolved, That, in the opinion of the board, the enactment of a National Bankrupt law in the present condition of the country is unnecessary, and likely to be productive of evil rather than of good to commercial interests; therefore, the invitation extended by the Board of Trade and Transportation of New York city to send a delegate to the convention called for the purpose of advocating such legislation is respectfully declined.

Those opposed to this resolution and in favor of a law suggested that statistics show that over

90 per cent. of the business men fail at some time during their career, and that owing to the difference in the various State laws there should be a national law similar to the one in force in England. Some were in favor of an involuntary bankrupt law, but against a voluntary law; an effort was made to send delegates to the convention, no matter what the sentiment of the board might be; others moved to send representatives to the convention that they might be recorded in opposition to the proposed law, but it was explained that the invitation was given to such bodies only as favored the law, and that opposition delegates were not expected. Besides declining to send delegates, the board appointed a committee to prepare and forward a memorial to Congress, explaining the action and the position of the board.

One of the advocates of the law now publishes a communication, criticising the action of the Board of Trade here, and from his card the following interesting extract is given:

This is a question not only of wise commercial policy, but of humanity. It is a question which is to determine whether the unfortunate debtor class, whose ranks have for over two years been swelled by the addition of over 10,000 assignments annually, increasing at the rate of over 200 per week throughout the United States, shall be for many years or a life time kept under the harrow of pursuing and relentless creditors, and thus denied the poor privilege of giving up all left them in the world and entering the field of business industry for the bread and meat and shelter that might sustain themselves and their wives and children and dependents. There is something horrible in that sort of slow torture through the many years of disappointed manhood, to old age and premature death, which characterizes the cruel pursuit of the debtor class by remorseless creditors in a country that has no bankrupt law—the city of refuge for the unfortunate.

What is the spirit that inspires the creditor who, not satisfied with the surrender of all his assets and the impoverishment of himself by the debtor toward meeting his liabilities, prefers to dog his steps for life-time and torture his sensibilities with ever-repeating cries for more? The relation tempts a man to become cruel and remorseless to his fellow-man.

It is a matter of common prejudice to regard all debtors as dishonestly avoiding their obligations by dissembling and evading payment. This is true of an exceptional few; but the mass of debtors die in the last ditch of effort to pay their debts and preserve their business standing. No mortification is more intense to nine-tenths of the business men than the loss of this, and with it the torturing duns of creditors, the loss of social influence, of business credit, of family prestige, and the impairment of all worth living for, in exchange for the cold charities of the world. The reverse, then, is true. Nearly all debtors go down fighting bravely to the end of all hope, in humiliation. No government of an enlightened and civilized people should be without a standard bankrupt law. Even the Mosaic code, over three thousand years ago, made provision for such a relief law. After seven years the debtor citizen of the Jewish commonwealth went out freed of all obligations of debt under the law. Every fiftieth year there was a universal cancellation of all debtors' obligations by limitation and without process. The refusal "to restore the insolvent debtor his pledge" was put in the same category with extortion by violence, adultery, idol-worship, manslaughter, &c., all severely punished under this divinely sanctioned civil code.

The fact that Louisville stands alone in opposing the law impelled your correspondent to interview some of the leading business men whose influence has contributed to that declaration.

Several merchants and financiers of experience, and having a general trade in different sections, state that since the abolition of the bankrupt law in 1878 their losses from bad

debts have been so much smaller that they must consider the absence of such a law a real benefit: that formerly dividends in bankruptcy averaged from 10 to 20 per cent., while now under the State laws dividends average from 20 to 40 per cent.; under the old law it took many months before a final dividend was reached, now it does not take as many weeks. They further claim that the creditor who has a demand against an insolvent can always be counted upon to be lenient or reasonable with the debtor if the latter can show his failure to be an unavoidable one, and that, in these days of cheap and loose credits, when so many "scalawags" obtain settlements on trifling pretences, surely no tradesman who has come honestly to insolvency need fear difficulty in obtaining a compromise and full release on any reasonable showing. The heavy costs and fees attending bankruptcy cases in previous years, when many estates were practically eaten up by the officials, are also suggested.

Congress being composed of a majority of lawyers, who, when not interested in passing complex laws, are not sufficiently familiar with the needs of commerce to permit a sensible law to pass in effective shape, they say, can hardly be expected to give the country a law that will be an improvement on the former one on this subject. They further hold that most of the State laws cover the best general features of a bankrupt law.

In the South, and particularly in Kentucky, preferences are not allowed, and security, unless given at such an early date as to preclude the idea that it was given in contemplation of insolvency, is held to operate as a general assignment for the benefit of all creditors.

To sum up the situation, as it is the general experience of the business people here that the creditors fare better and the insolvent debtors no worse without a bankrupt law, they are very decidedly opposed to a change; they believe in letting well enough alone, and are encouraged in their present stand by the most substantial and satisfactory results of five years' business operations since the abolition of the bankrupt law in 1878.

BOURBON.

DAYTON DOTS.

[FROM OUR REGULAR CORRESPONDENT.]

DAYTON, Ohio, December 15, 1883.

To-day is really the first day of winter that we have had, and trade has brightened up wonderfully. Our streets are thronged with busy shoppers, who carry suspicious-looking bundles home. Everyone, purchaser or seller, looks happy. This state of things has not been general, however. There has been just cause of complaint in many quarters, that trade was unusually slow. I think, however, that the worst is over, and that smoother sailing will be hereafter.

In the stationery business there has been more change in Dayton than any other time.

Crane, Jackson & Crane have opened out the finest store-room in the State. There room is 40 x 100 feet, and the wall-paper decoration is the most beautiful and costly of any room of equal size in the West. The Messrs. Crane selected the papers and superintended the hanging of same.

Captain Crane, the senior member of the firm—who is also in the employ of Warren, Fuller & Co.—is at home helping his partners through the busy season.

Thomas, Mayer & Van Sant have a beautiful

(Continued on page 912.)

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

OLD
BERKSHIRE
MILLS.

LINEN LEDGER PAPER

Being Triple Sized (a process entirely our own) and Loft Dried, can be erased and written upon the fifth time distinctly. None genuine without the water-mark, thus—Old Berkshire Mills Linen Ledger, and date.

Will stand the severest
test of COLOR, CLIMATE,
INK OR WEAR.

CARSON & BROWN CO., Manufacturers.

Extra Fine Papers

Manufactured by

Z. CRANE, JR., & BRO.,

DALTON, MASS., U. S. A.

These Goods, which are acknowledged to equal the finest foreign manufactures, are presented in the following styles and qualities:

SUPERFINE QUALITY.

In handsome Light Blue Boxes containing one-quarter of a ream of Note Paper each, and bearing in blue letters description of contents.

In separate Boxes of uniform size, are one-eighth of a thousand Envelopes corresponding in tint and quality to the paper.

EXTRA SUPERFINE QUALITY.

In attractive Lavender Colored Boxes containing one-quarter ream of Extra Fine Paper each, with contents printed in red. Corresponding to this, in like Boxes, are Envelopes to match.

All this Stationery may be relied on to be according to representation. It is suited to the tastes of the most select trade.

In addition to the above lines, our other Specialties are put up with care, in attractive and substantial form. Goods can be seen at the Mill, or at our New York General Agency, GEO. B. HURD & CO., 79 Beekman Street.

(Correspondence, continued from page 910.)

display of goods. They report sales as about double those of last year.

The Holden Manufacturing Company reports trade to be good.

R. A. Rogers & Co. have cleaned out their stock of goods closer this year than ever, and they report trade better than last year.

Reynolds & Reynolds are pushed to their utmost capacity to fill orders for their specialties.

Travelers are not very plenty. Mr. Hicks, with G. B. Hurd & Co., was here yesterday, and reports a good trade in his line. Mr. Knight, with Carter, Rice & Co., reported the other day, and he seems satisfied with his order-book. Mr. Clossen, with the Plimpton Envelope Company, stopped over a day, and reports trade all that could be wished.

The paper mills are not very busy; the wrapping mills are all shut down for sixty days throughout the

MIAMI VALLEY.

BOSTON INCIDENTS.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE OF THE LOCKWOOD PRESS, }
49 Federal Street, }
Boston, December 19, 1883. }

We shall not have to postpone Christmas, as I feared, for we have just been favored with a good old-fashioned snow-storm, and an accompanying blizzard. My petition in behalf of Santa Claus and the weather undoubtedly met the attention of "Old Probs," who has responded most nobly. And yet there are some people who doubt the value of printers' ink.

J. H. Bufford's Sons, however, are not among this class, as the growing business of the house will testify. At their mammoth factory at Harrison Square are employed over a hundred workmen, engaged the whole year round in producing that extensive line of goods so well known to the trade throughout the country. This is the oldest lithographic establishment in America, and with its three branches, in Chicago, New York and Boston, does a business of immense volume. There is possibly not a dealer in the country but knows of the goods manufactured by this enterprising house. Advertising cards and shape novelties in endless variety of design, Christmas, New Year and Easter cards, are only a few of the specialties manufactured. In shape goods a number of very pretty designs are just being presented, comprising statuettes, vases, tiles, palettes, and various other fancy shapes, very desirable for ornamental purposes. The line includes fancy shaped cards, both plain and embossed, to which are being continually added new and attractive designs. Something new in fans is also offered—the Japanese crimped fans. These fans are printed in bright colors on tough manilla paper, made so as to open and close. They are designed to represent the head of a cat, dog, or owl. Artistic novelties for dance programmes are also shown, embracing a large variety of beautiful chromo floral, landscape and Oriental designs. Marriage certificates, lithographed in colors, are having a large run. They are designed for all denominations of religious belief and no family should be without one.

The Robinson Engraving Company shows a new line of steel engraved corners for note paper which embraces an extensive variety of designs. Since the company moved into its new quarters on Hawley street its business has largely increased, and every facility for the speedy production of work is possessed by the company.

As a jobber of cards and shape novelties, J. Baird does an extensive business. His sales-room on Essex street is a perfect bazaar of ornamental and decorative card works. In birthday cards he has the largest line in the city. Here can be found the best productions of every prominent card manufacturer in the country. This statement can be relied upon, as Mr. Baird emphasized his remarks with a George Washington hatchet. A lot of English box valentines, imported by this house, are attracting no little attention from the trade. Easter cards are making their appearance upon his counter, and some of them are really beautiful.

Charles Pollock, who for the past fifteen years has been engaged in business in this city, is about to make some change in the management of his business, dividing it up into two concerns. The publishing and importing of photographs will still be carried on by Mr. Pollock, while George S. Downs and George H. Atwood will assume charge of the novelty department—holiday cards, frames, easels, albums, &c. These gentlemen have been connected with Mr. Pollock for the past ten years, and they are thoroughly conversant with the details of the business, and have an extensive acquaintance with the trade throughout the country. The change will take effect on the first of January, when the new firm will issue its circular to the trade.

An almanac, in which the computations have been made according to the new Eastern standard time, is soon to be published. The work is edited by Thomas Hill, ex-president of Harvard College. Tally another for Boston.

The Heath Letter File and Index Company is making some very extensive progress since Mr. Hosmer became a member of the firm. Mr. Hosmer is convinced that the Heath system of letter-filing is just the thing, and he is getting ready to let folks know it. Agencies are about to be established in New York and Philadelphia, and at Raleigh, N. C. The facilities for the manufacture of this letter file have already been increased. To make the cabinets fire-proof, that letters can be safe from destruction in case of a conflagration, is a new idea with Mr. Hosmer, and arrangements have been made for that purpose. So henceforth we have a fire-proof letter file. I think that takes the lead—and tally another for Boston.

A. L. D.

TORONTO NEWS.

[FROM OUR REGULAR CORRESPONDENT.]

TORONTO, Ont., December 14, 1883.

Things are more or less mixed in this part of the Dominion just now. We are having very mild weather, with frequent rains and no end of mud. This sort of thing don't suit the dry-goods folk, furriers, &c. They hanker after snow-storms and cold weather about this time, so that they may have a chance of supplying shivering humanity with warmer gear, and the coal and wood men no doubt pray for the same state of things. But after all, there is a very large class to whom cold weather means discomfort, misery, and additional expenses hard to be borne. It is a difficult thing to gauge the weather to suit everybody, and I should not at all like to be at the head of that department. I think I would much rather be an editor, and that is bad enough for anything they say.

Now, about business. There has been a change in the *Standard Publishing Company*. R. O. Smith, the first manager of the book department, has been superseded by the Rev. Geo. Richardson, who says that trade with this company is good.

Robert Marshall, dealer in books, toys and

fancy goods, says that he has been very busy for the past three weeks, and if trade keeps up he will be pretty well cleaned out by New Year's.

Hart & Co. have a fine show of fancy stationery, annuals, leather goods, Xmas cards, &c., and report trade good for wholesale.

Barber & Ellis Company, Buntin, Reid & Co., Copp, Clark & Co., W. J. Gage & Co., Brown Brothers, Toronto News Company, &c., have all had a satisfactory fall trade.

Holiday goods are to be seen in endless variety, and if Santa Claus does not make liberal donations all around it will not be the fault of the dealers. Christmas cards are, of course, to the fore. I cannot see that they have diminished in quantity, but very much in quality. I think. If these goods are to pass into the hands of needlewomen, and people prefer a tastefully got up satin pad, with plush and fringe borders, with an inferior picture for a centre-piece, it is all right. Purchasers pay their money and take their choice; but a card 14x16, in a box, is rather a formidable thing to deliver without an express wagon.

"Facts are stubborn things."—Gil Blas. More "book larnin'." I do not know who our Montreal friend is driving at, but I presume his facts are gathered in the same way as by other correspondents, and are sometimes very wide of facts indeed. I do not believe our friend would knowingly make a misstatement; but it is not wise to throw things around promiscuously, because a shot may ricochet and hit quite a different place from that intended by the shooter. Now, about the Bennett & Co. failure, you will see from the inclosed that it is a different affair altogether—is, in fact, a discreditable business, and that Mr. Bennett is under arrest for conspiracy to defraud.

The failure of Willing & Williamson, which has been announced in your paper, will throw a large stock of books and fancy stationery on the market at reduced prices, and will affect the Christmas trade considerably, which is a pity. There was a meeting of creditors yesterday, but no definite action was taken. It is understood, however, that the business will go on to the end of the year under the direction of the receiver, and then will be closed out.

The Methodist Book and Publishing House reports trade good. It has in press two new books, "Shot and Shell: a Temperance Book," by Rev. D. Rogers, and "The Field and the Work: a Review of Missionary Work in the Far West," by Rev. Jno. Gemmens.

Rowell & Hutchison have no fault to find, they have all they can do.

James Bain & Son are not disposed to grumble about trade, and Davis & Henderson say that while they are not overcrowded with work, at the same time they have all they can comfortably do.

Now, Mr. Editor, permit me, before I bow myself out, to wish your noble self, and all of your associates in the office, and all of the scribblers outside in any way connected with THE AMERICAN STATIONER, the compliments of the season.

C. H.

James D. Whitmore & Co.'s travelers are about starting out to take their early spring orders. This house will show in the coming season a large and varied line of goods for the spring trade, among which will be some new and attractive styles of wedding goods, lithographed, stamped and bronze papeteries, card cabinets, &c. The season just closing has been very satisfactory, and in order to keep up with orders their factory has been running nights for some weeks past.

COMBINED WATER-TUB AND COPYING PRESS.

A very good and convenient combination in copying presses is illustrated. It is, as will be seen, a water-tub attachment to the platen of the press, taking no extra space, always at hand and ready for use, and not to be upset to deluge

the letter-book. The stationery trade will be able to judge of the merits of this device without further explanation. It is manufactured by H. N. Hubbard, New York.

A Revolution in Stylographic Pens.
The Latest Improvement.

THE KERNER.

\$1.

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a FLEXIBLE air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequaled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platina alloyed with Iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

SUPERB VALENTINES FOR 1884.

PURE and chaste in sentiment, the combined work of our best American artistic and literary talent, our line of Valentines for 1884 cannot fail to receive the support of the most refined class of buyers.

We have been guided in their preparation by the success in former years, and by the expressed wants of the trade.

The following artists, among others, are represented:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS ROSINA EMMET,
MISS L. B. COMINS,
MISS ALICE W. ADAMS,

F. S. CHURCH,
HARRY BEARD,
C. Y. TURNER,
H. GIACONELLI, of Paris.
F. SCHUYLER MATHEWS.

A varied assortment of Valentines by the above-named artists is offered in plain form, and single and double silk fringed.

ENVELOPES furnished with almost all our Valentines, without extra charge.

BACKS.—We again beg to call attention to the elegantly-designed backs, which are a special feature in our cards.

SATIN PRINTS.

Besides a number of FLORAL DESIGNS mounted in a variety of novel styles, special attention is called to our finest production in this line,

THE "LION IN LOVE" VALENTINE.

This is a rich satin print, on an elegant fancy plush mount. The design is after F. S. CHURCH's important work of above name. The poetry is by J. V. CHENEY. The picture is of the greatest artistic merit, and, on its elegant mount, forms, what we think, one of the most unique, artistic and sumptuous St. Valentine Souvenirs ever offered to the public.

Retail Price, in a neat suitable box, \$10.00.

DESCRIPTIVE PRICE LISTS OF OUR VALENTINES ARE NOW READY.

Besides our Valentines, we call attention to our NEW BIRTHDAY CARDS, including SATIN ART PRINTS, NEW SCRIPTURE TEXT CARDS, NEW COPIES FOR PAINTING, &c.

Our line of EASTER CARDS and EASTER NOVELTIES will shortly be announced.

CELEBRATED "CLIMAX" BLOTTING PAPER,

The "CLIMAX" possesses the following advantages:

- 1st, *Full weight*, as marked in figures on bundle.
- 2d, Absolute uniformity as to quality and color.
- 3d, It will not harden with age.
- 4th, It is of absolutely *unrivaled* quality.
- 5th, Cheapness, in view of its excellence.

Sold by all Prominent Stationers and Paper Dealers.

Quarter-ream packages of assorted colors will be sold (as a sample, if desired).

JAMES A. WHITNEY,
COUNSELOR-AT-LAW.

Special attention given to Patent and Trade-Mark Causes.

140 NASSAU ST., NEW YORK CITY, U.S.A.

JAMES A. WHITNEY,

Solicitor of United States and Foreign Patents and Trade-Marks,

No. 140 Nassau St., New York City.

American, Canadian, British and Continental Patents obtained for Inventors on favorable terms, and in the shortest possible time. Caveats filed, Reissues and Design Patents secured, Trade-marks and Labels protected by registry at the U. S. Patent Office and in Canada and Europe. Rejected Cases investigated and reported upon, Interferences conducted, Opinions on Questions of Infringement, the Validity of Patents, &c., &c.

Personal attention throughout is given to each and every case—a matter of no inconsiderable importance to those who wish strong claims and specifications CAREFULLY DRAWN. Business may be transacted either in person or by mail, and in every detail is kept in violationly SECRET and CONFIDENTIAL.

JAMES A. WHITNEY, 140 Nassau St., N. Y. City.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

POWER, FOOT & HAND Perforating Machines.

WHEN WRITING, PLEASE MENTION
THE AMERICAN STATIONER.

E. B. STIMPSON, 31 Spruce Street, New York.

The Peerless Rotary Perforator and its advantages:

- FIRST.—It handles buckled paper as well as flat, and runs the work through straight.
- SECOND.—It has the best system for rapid and perfect feed.
- THIRD.—It has the best system for gauges, and can be more quickly adjusted.
- FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.
- FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.
- SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.
- SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.
- EIGHTH.—Each machine has a scoring cutter attached.
- NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Mrs. D. Schulz, dealer in toys, Baltimore, Md., is dead.

Otey Clinton, publisher, Harrisburg, Ill., has removed to Du-Quoin.

S. C. Farnham, publisher of the *Chronicle*, Vallejo, Cal., is dead.

Golestein & Co., job printers, San Francisco, Cal., have been attached.

M. T. Dowling, publisher of the *Democrat*, Hollister, Cal., has sold out.

John McCullough, paper-stock dealer, Boston, Mass., has gone into insolvency.

W. C. Jones has bought out the *Transcript*, published by J. D. King, Paris, Ont.

I. Brown, bookseller and stationer, Westerville, Ohio, has sold out to N. Bushnell.

An assignment has been made by D. G. Patton, printer and stationer, Savannah, Ga.

W. L. Thomas has retired from the publishing firm of Thomas & Stone, St. Louis, Mo.

Charles Ball, news-dealer, stationer, &c., Bethel, Conn., has sold out to George H. Cole.

An attachment has been issued against W. T. Ryan, dealer in wall-paper, &c., Detroit, Mich.

An assignment has been made by the Cross Wood Printing Company, sign makers, Chicago, Ill.

Fulenwider Brothers, publishers of the *Hotel Register*, St. Louis, Mo., have been damaged by fire.

T. P. Dick & Co., tag printers, Louisville, Ky., have made an assignment to Thomas E. Turner.

The Bay State Paper Company, Springfield, Mass., has sold out to the Morgan Envelope Company.

H. N. Hubbard has met with very flattering results in the introduction of his new copying-press and tub combined.

A dissolution has taken place in the firm of Bloomer & Keith, printers, Peoria, Ill. W. M. Bloomer continues the business.

William Mann & Co., about January 1, will remove from their present quarters, No. 51 Liberty street, to No. 88 Maiden lane.

The schedules of Seaman Jones, Jr., & Co., New York, dealers in paper hangings, show liabilities of \$6,263; nominal assets, \$24,348; actual assets, \$8,055.

J. M. Spore, wall-paper dealer and stationer, Grand Rapids, Mich., was burned out on Sunday morning, together with several other business houses. The loss on buildings is about \$15,000, and on stocks about \$30,000. The total insurance is \$18,000.

In the production of advertising devices and a fine class of Christmas, birthday and New Year cards there is no firm in the city that has shown more enterprise than J. E. Linde. Mr. Linde's productions need to be examined to be fully appreciated by the trade. They are all fresh in design and executed in the best style. His latest shape novelty is No. 296, Santa Claus in a Sleigh, and is quite taking.

A Toronto paper says: "A new way to pay old debts has been successfully discovered by a Mr. Bennett. A paper merchant here, carrying on business under the style of Bennett & Co., is now in the throes of insolvency, to which he is not a stranger, as he has gone through the ordeal pretty often before. It is singular that when a man commences the practice of not paying his lawful hundred cents on the dollar, he generally keeps it up all his life, and this seems to be the career which suits Mr. Bennett best, like many others in trade in this moral city. It would seem from a writ of *capias* for nearly \$1,300, taken out by Mr. McMaster, Q. C., for a Western manufacturer, that some time ago Bennett ordered consignments of paper to be sent to him, for which he gave notes not yet matured. The goods, it appears, were transferred while actually in transit to the Canada Paper Company, to whom the firm owed some \$6,000, on condition that it paid the chief actor in this novel trading operation 60 per cent. cash and 40 per cent. to go to his credit with the company to reduce his indebtedness. The goods, it is alleged, never entered the jobber's warehouse, but were taken direct from the depot to the Canada Paper Company's establishment. This extraordinary mode of paying a man's debts is like robbing Peter to pay Paul, and if the law sanctions it, it is full time stringent measures were taken to purify commercial transactions. The defendant has been arrested."

The Akron Straw Board Works of John F. & Monroe Seiberling, Akron, Ohio, were burned on Sunday morning, except one building. Loss, \$40,000; insurance, \$10,000. The cause of the fire is unknown. The works were running until one o'clock on Sunday morning.

The sheriff closed the paper mill at North East, Pa., owned by West & Sweeney, of Pittsburgh, on Monday. The plant is worth \$30,000. The liabilities are unknown. The claim under which the proceeding mentioned has been taken is for \$6,000.

The many thousands of persons who will receive a Christmas present this season in the shape of a Kerner stylographic pen will bear testimony to the superiority of this pen, which has had a phenomenal sale this season.

The Ontario Electro and Stereotype Foundry, owned by R. Smith, Toronto, Ont., has been amalgamated with the National Publishing Company, of the same place.

Ellicott & Moore, manufacturers of picture frames, &c., Philadelphia, Pa., have dissolved partnership. The business is continued by Henry J. Ellicott.

The *Gazette* Publishing Company, publisher of the *Daily Gazette*, Wilmington, Del., has sold out to the *Every Evening* Publishing Company.

The American Carpet Lining Company, Devonshire street, Boston, has failed. The creditors are offered 50 cents on the dollar.

William Bamberge, manufacturer of printers' supplies, Houston, Tex., has made an assignment.

The plant of Timms, Moore & Co., printers, Toronto, Ont., is advertised to be sold at auction.

The Marlboro Times Publishing Company, Marlboro, Mass., has been burned out.

The Presumpscot Pulp Ware Company, Portland, Me., is reported in insolvency.

W. F. Lenour, dealer in wall-paper, &c., Topeka, Kan., has failed.

H. Carpenter, publisher, Papillion, Neb., is dead.

E. O. Rose, publisher of the *Post*, Grand Rapids, Mich., has sold out.

Cash A. Davis, dealer in wall-paper, Cincinnati, Ohio, has made an assignment.

Arthur Walker, of the firm of A. Walker & Son, manufacturers of paper boxes, Pittsburg, Pa., is dead.

Kanaga & Lawson, publishers of *The Interior*, Hutchinson, Kan., have dissolved partnership. J. H. Lawson has succeeded to the business.

The stock of wall-paper carried by the Fort Wayne Paint and Painting Company, Fort Wayne, Ind., has been sold to A. C. Katt & Co.

A dissolution has taken place in the firm of Fowler & Hubbard, booksellers and stationers, Topeka, Kan. M. E. Fowler will continue the business.

The Henry Seymour Cutlery Company is doing quite a large export trade. It made a shipment to Russia a short time ago. Since the appearance of the advertisement of the bankers' shears in THE STATIONER, the sales of these shears have been doubled.

The fine writing papers offered to the trade by Marcus Ward & Co. have had such a large sale this season that the firm has been scarcely able to import them fast enough to meet the requirements of the trade. These papers are manufactured of pure Irish linen, and in texture and quality of material are A No. 1.

T. Shriver & Co., 333 East Fifty-sixth street, New York, have gotten up two new styles of copying-presses, with platen 12 x 18 inches; also, one new style 17 x 22 inches, and will have for the New Year a line of low-priced presses of new design and attractive finish in color. Their Reservoir copying brush is offered at a reduced list.

Judgments aggregating \$31,000 have been obtained against George McDowell & Co., wholesale stationers and proprietors of the Schuylkill paper mill, Philadelphia, Pa. A judgment amounting to \$20,000 has also been obtained against George McDowell, individually. Executions have been issued. The firm admits its embarrassment.

The Goodwillie-Wyman Company, dealer in printing presses and paper-cutting machines, of Boston and No. 20 Chambers street, New York, has become financially embarrassed. At the office it was stated Tuesday that a receiver would probably be appointed. The liabilities were about \$50,000, and it was a difficult question to answer whether the assets were sufficient to pay in full. The business was started in Boston in 1876 by Goodwillie, Wyman & Co., who opened in New York in 1880, and turned the business into a stock company in October, 1882, with a capital of \$50,000. S. H. Robinson, the financial backer of the company, holds a chattel mortgage on presses of \$16,500 for money advanced.

The Millers Brothers Cutlery Company has lately brought out several new articles in cutlery, among which are a number of styles of a navy knife, the blade of which instead of opening and shutting, as in ordinary knives, slides into the handle by means of a spring. The company has also brought out several new styles of steel pens, the manufacture of which is being conducted on a large scale. One of the new styles is the double elastic pen, and another the fountain-stub pen. The company has added also three styles to the imprint pens, which it

manufactures in large quantities for dealers wishing to sell pens bearing their own names.

O. F. Glenn, printer, St. Paul, Minn., has been sued for \$173.

John Lawrence, dealer in paper stock, Philadelphia, Pa., is dead.

Beall & Conklin, publishers, Socorro, N. M., have sold out to Colonel Blake.

Isabelle Yingling, stationer, &c., Lexington, Mo., has sold out to Mrs. F. Turner.

Kice & Payne, publishers, Ava, Mo., have dissolved partnership. J. H. Payne continues the business.

A. L. Paxson & Co., booksellers and stationers, St. Louis, Mo., have made an assignment.

The Midland Publishing Company, St. Louis, Mo., has been incorporated with a capital stock of \$30,000.

The Dennison Manufacturing Company is making plush opera-glass bags, which are very convenient and attractive.

T. M. Potts, publisher of the *Herald*, Cannonsburg, Pa., has admitted his son into partnership, and the firm will do business under the style of T. M. Potts & Son.

C. W. Strong, manufacturer of binders' boards, North Westchester, Conn., is about to retire from business at that place. He is embarrassed and is undecided whether to make an assignment or not.

The trade in Prang's Christmas cards this season has been very flattering to the publishers of these pretty reminders of affection and friendship. An inspection of these goods cannot fail to convince one that they fully deserve their popularity.

Francis & Loutrel, New York, have their usual line of office and pocket diaries, pocket almanacs, &c. Diaries in plush and alligator are specially remarkable. This firm is also offering a fine and varied line of holiday goods. It sends out an announcement on an embossed circular sheet of new form, the flap being an imitation of alligator, the color cream-white.

Clague, Wegman, Schlicht & Co., Rochester, N. Y., have added another novelty to their list of binders, files, &c. It is a pamphlet binder, which has features of originality and convenience which are likely to bring it widely into use. The pamphlets are bound through the back and not by marginal perforations or other well-known devices, and are retained firmly in place. Samples are ready for the trade.

Liebenroth, Von Auw & Co. have issued a notice that on and after January 1, 1884, their terms will be "strictly four months from date of invoice, subject to the usual cash discount if liquidated within thirty days, all accounts not cashed within this time to be settled monthly by note or acceptance." The firm is impelled to make this announcement by the fact that it intends to help in doing away with the system of extended credits and dating bills ahead.

Garton, Berry & Co., booksellers and stationers, Detroit, Mich., have sold out to Thorndike Nourse, who will close out the business.

The Holyoke Papeterie Works have extended their business since coming into the hands of Abbe & Tyner. They were started by J. D. Whitmore & Co., a year or more ago, and shortly after purchased by Abbe & Tyner, who are also the head and front of the Holyoke Envelope Company. They occupy an entire floor, 300 by 90 feet for the papeterie business, in the Holyoke Water-Power Company's Cabot street building. The business is managed by J. F. Hitchcock, who is thoroughly versed in the ins and outs of the trade. The number of hands employed is twenty-five, and this force can be doubled if found necessary. Although this is the dull season, the company has orders enough on hand to last till Christmas. For the fall trade 450 styles have been shown in boxes of all shapes and sizes, covered with plush, silk, satin, and fancy papers. The paper used in filling the boxes embraces 75 sizes and weights, and the envelopes are made in the same building. The company is busy preparing for the spring trade, and it expects to place about 250 styles on the market. The boxes cost less for the spring trade and are less elaborate, which accounts for the difference in the price. The company makes its own boxes, and a large line of plushes, velvets, satins, silks, fancy papers and borders is carried, three hands being con-

stantly employed making sample boxes. For a young concern this company is making an excellent record.

The Union Publishing House, Columbus, Ohio, has been succeeded by F. L. Patrick & Co.

William Krook & Son, dealers in artists' materials, Reading, Mass., have lost a member of their firm by the death of W. Krook.

The Welland Printing and Publishing Company (incorporated), Welland, Ont., has advertised its plant and business for sale by tender.

The Richmond Paper Manufacturing Company, N. H. Furness, Agent, Temple Court, New York city, has got up a sample package of its "Climax" blotting, in its different shades and thicknesses.

Cassell's *Family Magazine* for January, 1884, is the first number of Vol. 1 of the New Series. It is well printed, handsomely illustrated, and in every way attractive. Its low price is another element which will conduce to the success of the publication in the new form.

Price & Fryett, stationers, &c., Beatrice, Neb., have dissolved partnership. S. J. Fryett will continue in the business at Blue Springs, Neb., and H. D. Price will succeed Mr. Fryett at Beatrice, in partnership with his brother, Jay F. Price, of the late firm. All accounts coming due from the Beatrice house will be settled by the new firm, and those coming due from the Blue Springs house will be settled by Mr. Fryett.

Foley's Patent Improved Stylographic Pen.

Great reduction in price: No. 1, \$1.50; No. 2, \$2.00; No. 3, \$2.50; No. 4, \$3. A liberal discount to the Trade. FOLEY'S PATENT STYLUS is the best and only Pen with point, spring and cleaner in air tube. Fully warranted, and exchangeable for gold pens and pencils.

We, the subscribers, who know the value of FOLEY'S PENS from constant use of them for a number of years, cheerfully recommend them to those who wish for the best and most perfect Gold Pen ever made.

Signed by the following gentlemen and over 1,000 others: G. S. Coe, Pres. Am. Ex. Nat'l Bank; J. A. Beardsley, Cashier Nat'l Bank of North America; Wm. A. Fall, Pres. Corn Exchange Bank; E. H. Lowry, Pres. Nat'l Bank of the Republic; F. D. Tappan, Pres. Gallatin Nat'l Bank; C. F. Timpson, Cashier Continental Bank; I. G. Ogden, Cashier New York Co. Nat'l Bank; Chas. Dennis, Vice-Pres. MAKING ANTIQUE GLASS.

It is claimed in Boston that the only antique glass produced has its origin in that city. Elsewhere it is not disputed that the Antique Glass Company of South Boston has succeeded in gaining mechanically, through studied efforts, results quite similar to those obtained accidentally in ancient times. It is nevertheless generally understood that some of the English stained glass manufacturers have been for some time making corresponding experiments.

In the new process small portions of the material, taken before its elements are fairly blended by boiling together, are whirled separately by the use of a stick into rondels of varying arrangements of color. The product has the appearance of being cooled while in a state of fermentation, and when full of bubble and stride it is the better liked by some of the decorators. One of its varieties, which is rather fancifully spoken of as the froth of ebullient glass solidified, is an airy formation, a specimen of which in white swept with streaks of purple in changing tints is delicate and beautiful, as may be imagined of the precious murrhine wares of antique celebrity. The material in its simply fused, uncommingled state is usually whirled into the shape of a circular plate, or occasionally that of an elongated pear. In combination with rolled cathedral opal, and other varieties of glass in use, these forms of spun glass are introduced effectively in present examples of Boston glass workers. It is considerably used by Mr. McDonald, who, like Mr. La Farge, seeks effects as far as possible without the aid of the brush, and of whose admired window in the Channing Memorial Church at Newport, the Parable of the Sower, the statement is made that it contains not half an ounce of stain. Mr. McPherson also has adopted the new production successfully in recent works of some magnitude, two of which are windows for a church at Great Barrington, Mass., presented by Mrs. Hopkins, of San Francisco. One illustrates the Calling of the Disciples, and the other the Landing of the Pilgrims. The latter has been for some time exhibited in the Boston Museum of Fine Arts. These windows are chiefly of English antique and rolled cathedral, with a small quantity of opalescent glass, and an enlivening arrangement of spun glass, although only in small quantity, in connection with the border of jewels. The figure panels of each are of double glass in the style of work called plating; the depth of color, the effect of light, and the perspective impression derive some apparent advantage from the admission of the whirled glass with its lively quality.—*Sun*.

MAP VARNISH.

Pulverize one ounce sandarac, a quarter of an ounce mastic, a quarter of an ounce elemi, dissolving them in half an ounce of Venice turpentine, and adding to it a solution of four ounces shellac and three ounces oil of lavender in twelve ounces of alcohol. There is no danger of the printer's ink running during varnishing if the printer's ink is first allowed to dry. Use a flowing (hair) brush.

Nothing is so reasonable and cheap as good manners.

WANTED.

By a Wholesale Stationery House, a Traveling Man acquainted with New England trade.

Address, with real name, Box 3689, Boston, Mass.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 20, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of Importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

BEFORE our next issue of THE STATIONER Christmas will have come and gone. We therefore now wish all of our friends whose kind feeling and regard we have experienced in this and many past years, a "Merry Christmas," hoping that neither sorrow nor regret may cloud their spirits and that all of the joys of the season may be theirs.

WE have just had a brief talk with a merchant who is logical in his ideas of advertising, yet, if occupying another sphere than that of membership in a prominent manufacturing house, and appearing in the garb of an advertisement canvasser, he would probably find many who would dispute his logic and turn a deaf ear to his suggestion. This merchant does not believe in spasmodic displays to secure and retain public attention. He regards, from a business standpoint, an advertisement judiciously framed and exhibited as seed which cannot fructify in a moment, or as leaven which has to take its time in producing results. He expects time to prove the value of an experiment and haste to realize to demonstrate the uselessness of spurting. If business men put on a "thinking cap" when considering the subject of advertising in well-known and legitimate mediums of trade intercourse, we believe that their reasoning would lead them to unexpected conclusions as to cause and effect.

AN instance of the good results of the agitation of the bad system of extending credits and dating bills ahead has been afforded by a prominent stationery house this week. The action of the firm mentioned is remarkable, not only that it follows out the line of mercantile ethics which THE STATIONER, with other commercial journals, has so earnestly supported, but because it is a courageous effort to give strength and impetus to the movement for carrying out a reform which all of the preaching in the world will not effect if merchants refuse their practical aid and sympathy. The firm which we refer to has not waited to confer with others, nor has it asked for a general agreement or common union in the right direction, but it has acted independently, forestalling all combinations, and with a directness and straightforwardness which go right to the heart of the issue, says that being satisfied of the ruinous consequences of the existing system of extended credits and of dating bills ahead, it has decided upon a change of terms, and that with the first of January it will adopt a strict rule for limiting credits. We do not believe that this is one of those New Year resolves made only to be broken before many days, and we shall be much disappointed in our estimate of the house should it fail to live up to its announcement. Now, how many readers of THE STATIONER are going to cut loose from timid fears and the dread of fancied competitors, whose success lies in abnormal

methods of business and trade policy? We hope that one and another, and so on through the whole category of reputable merchants, the rule will become inflexible, that cheap credits are no longer attainable and that bills shall not be dated ahead. Let the scalawags of trade have the monopoly of their bad principle, and they will soon disappear from legitimate commerce to indulge in practices which may result in their seclusion for whatever period of years the statute may prescribe and the administrators of law may specify. Let us have reform—now, immediate!

ROUNDABOUTS.

BY THE TRADE LOUNGER.

I saw a dainty lady buying Christmas-tree ornaments, and could not help thinking what a good idea it would be if she, and others like her, could only be put on Christmas trees as gifts to those whom they might prefer. It would be a pretty way of replying to a "pop."

* * * *

Wholesale dealers are up to the old dodge, selling at retail, and underselling the city retailers to whom they have already disposed of fair lines of goods. This is pretty rough!

* * * *

Snow for Christmas! Didn't think it was coming along, did you? The old saying: "A green Christmas makes a fat churchyard," is not likely to have a chance to assert its verity this year. Aren't you glad? Let us be happy!

* * * *

A leading firm is pushing its export trade. It seems to have taken THE STATIONER'S advice to heart. Well, it can't lose anything and the chances are that it will have satisfaction. It is said that good results have followed these efforts and that encouragement is beyond expectation.

* * * *

I have run across a house which thought it would try an "ad." in THE STATIONER. It has been gratified to the extent of doubling its trade in the line advertised since it made the venture. Who says that advertising doesn't pay?

* * * *

Isn't there some mistake about that statement that Breeds' scrap-book is not manufactured now? Ask Merrill, Meigs & Co., of Indianapolis, what they think about it.

* * * *

"That will go, sure, will it?" said a plainly-dressed, matronly-looking woman to a dealer in holiday novelties on John street. "Be sure and send it," added she, as she was about to depart, "because he is a boy, you know, and if he does not get it by Christmas he will be disappointed." The lady had bought a Christmas present for her son, who was in a distant town attending a boarding-school. The dealer assured her that the article would be sent without fail, and the fond mother departed with a countenance expressing cheerfulness and satisfaction. What a "set-back" that dealer could achieve!

* * * *

"We are selling more holiday presents this season than we sold in any former season," the dealer remarked after the lady had left. "The most of our customers are people of moderate means, too. In the matter of gift-making, nobody seems to stand back, and there is such a great variety of articles suitable for presents that I do not think purchasers find much trouble in

making their selections, either in the matter of price or the character and appropriateness of goods.

A gift that every lady would appreciate is a basket of artificial flowers. The colors of these flowers are very rich and natural, and an article of this kind makes a very pretty ornament for the parlor table or ladies' dressing-table. Prices range from \$1 up.

The Swiss chalets, some novelties in imported jewelry, cigar, glove cases, &c., are attracting many buyers of Christmas presents this season. They are not exactly new to the trade or to European tourists, but are sufficiently novel to be prized by those to whom they might be given. Each chalet contains a music-box, which plays from one to two popular airs on touching a spring. They retail at various prices up to \$35

A book-rack makes a very appropriate gift in many cases. It is intended to hold a few books, which for convenience have been taken from the bookcase and placed on the parlor table for reference. The sides of the rack are carved, representing flowers and vines, the appearance of which may be greatly improved by lining the sides with plush, making a pretty background. The price of the rack is \$2.50.

The "Cozy Kettle" is a swinging tea kettle, adjusted in a neat frame over a lamp. It comes in bronze and copper very finely polished, and is a very convenient article to the housewife who is accustomed to entertain her lady friends of an afternoon now and then. It can had from \$4.50 to \$10.

About as useful and interesting a holiday gift as can be made is a microscope—not a trashy thing, but one which no one need feel ashamed to present. A low priced microscope of this class can be bought for \$10.

In bronze goods there is an endless variety of articles offered. There are folding mirrors, sconces, fancy inkstands, candlesticks, statuary, &c.

Of course in the line of toys there is a wide range of choice for fond and doting parents. One sometimes wonders where on earth all of the toys go to; but when I look at that youngster of four autumns who rackets around where I live and remark his idiosyncrasy for taking things apart just to know how it is himself, I have to concede that there are scarce enough toys in the market for the multiplying number of four-year-olds who are constantly coming into life's race.

A rare good thing has been done by a well-known house, which, I think, must have been reading THE STATIONER. Without waiting to combine with others to agree upon putting an end to dating bills ahead, &c., it has made public announcement that its terms will be inflexible. This is laudable. Who comes next?

ANSWERS TO CORRESPONDENTS.

Subscriber asks: 1. Address of maker of the "Lockwood envelope." 2. Manufacturer of the patent elastic back-copying book.

Ans. 1.—Lockwood Manufacturing Company, Philadelphia. 2. F. S. Hasbrouck & Co., 66 Duane street, New York, but they are not now making any.

O'L., B. & Co. want to know: 1. Who manufactures

the "Only" pencil holder." 2. Who makes "Premium" blotting.

Ans.—1. Baker, Pratt & Co. 2. We cannot say.

J. E. C. asks for the addresses of parties in France, Germany or England, who manufacture chessmen.

Ans.—We do not know of any. Will some of our foreign correspondents please advise us?

In reply to a late inquiry about Breed's scrap books, we have been told that Merrill, Meigs & Co., Indianapolis, make them.

Market Review.

OFFICE OF THE AMERICAN STATIONER, {
WEDNESDAY, December 19, 1883. }

THE MONEY MARKET.—The money market remains easy and undisturbed by the movements in stocks. Call loans on stocks are 2@2½ per cent. and 1@2 per cent. on United States bonds. The stock market has been less active, and closed quiet and lower, although with a better and less distrustful feeling in the Villard stocks. Government bonds were slightly lower for the 3s. Railroad bonds were fairly active, and, although irregular, were generally firm. Foreign exchange was without new features, the market for sterling being firm and quiet.

THE PAPER MARKET.—While all sections of the country feel more or less the present dull condition of business, the trade in the East should derive some encouragement from the fact that prices have not fallen to the low level at which they are said to be quoted in the West, and we presume that the great law of supply and demand controls values there about the same as everywhere else. We are told that Western manufacturers are offering a good article of supersized and calendered book paper at 8c., and they would accept orders for No. 1 manillas at 6½c., these prices being lower than our current rates. Manilla papers show less activity than they did a few weeks ago, and what with a falling off in the demand and a slight decline in the prices of jute stocks, it is doubtful if the advance of a few weeks ago can be sustained. Tissue manillas are in very large supply, and are offering at very low figures. The export trade in straw wrapping to Cuba feels the competition of the German manufacturers, and complaint is made that, through their lower prices, the business is becoming very much reduced.

THE STATIONERY MARKET.—Trade, with the exception of a few stray orders of a local character, is uniformly dull. Business has fallen off considerably during the past few days—a thing not looked for—a general lull being natural at this season of the year. This remark not only applies to staple goods, but to that class of goods which comes more properly in the line of holiday novelties. The busiest tradesman now is the retail dealer, who is reaping a harvest of sales in Christmas wares. In plush goods little is doing, and no effort is made to push these products, dealers generally feeling that the season is closed. The same is true of toys, Christmas cards and the whole category of holiday goods. Business, in the language of a dealer, is flat. The envelope trade is remarkably fair under the circumstances, and an improvement is looked for after January 1. A fair amount of business is also doing in blank-books, which show evidences of steadiness and firmness both in prices and the business done.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

THE NATIONAL PAPETERIE COMPANY,

MANUFACTURERS OF

PAPETERIES, FRAMES, MIRRORS, AND FINE ART BRONZE GOODS,

SPRINGFIELD, MASS.

A REMINISCENCE.

The Germantown, Pa., *Independent* says: James Arnold, bookbinder, a resident of 210 Mill street, one of our subscribers, sends us the following:

HISTORICAL EDITOR INDEPENDENT—An old Bible, printed in Trenton by Isaac Collins, dated 1790, has just come into my possession, and inside the cover I find the inclosed label. Can you throw any light on the centenary bindery?

Bound
by
PHILIP WEAVER,
Germantown.

We have been enabled to glean a few facts in relation to the matter. Philip Weaver, the bookbinder, lived and carried on his trade in a building situated on Main street, opposite the present Franklinville depot of the passenger railway, adjoining the Carpenter estate. He died suddenly of apoplexy March 10, 1824. He was an uncle of Samuel Keyser, whose portrait appeared in the first number of this paper. Many old and substantially-bound volumes, the work of his hands, which would do credit to the best work of to-day, are in existence, some of which bear the imprint, the property of "Philip and Ann Weaver." Daniel L. Keyser has shown us several well-bound volumes of "Scott's Commentaries" which bear the latter label. John Zinzer, now eighty years of age, who resides with his son at Morton street and Walnut lane, was an apprentice at the bindery mentioned above at the time of Philip Weaver's death.

ZYLONITE.

One of the most remarkable uses to which paper has been put of late years is the manufacture of zylonite, a substance which at the will of the manufacturer may be made in imitation of horn, rubber, tortoise shell, amber and even glass. The uses to which zylonite are adaptable are almost infinite, but perhaps the most extraordinary is the manufacture of cathedral windows. The discovery was made by an Englishman named Spills, about fifteen years ago, but it was only about five years ago that a company was formed in London for its manufacture. The basis of zylonite is a plain white tissue paper, made from cotton or cotton and linen rags. The paper being treated first with a bath of sulphuric and other acids, undergoes a chemical change. The acid is then carefully washed out and the paper treated with another preparation of alcohol and camphor. After this it assumes an appearance very much like parchment. It is then capable of being worked up into plates of any thickness, rendered almost perfectly transparent or given any of the brilliant colors that silk will take. It is much more flexible than either horn or ivory and much less brittle. Combs or other articles made of it in imitation of tortoise shell are said to be so perfect in appearance as to deceive the eye of the most practised workman in that substance. The difference in the materials can be detected only by tests. A plain white tissue paper also forms the basis of celluloid, and the treatment in the early stages of preparation are somewhat similar. The chief difference, however, between celluloid and zylonite is that the former cannot be rendered transparent, and, therefore, cannot like the latter be made to imitate so many different substances.

Childhood shows the man as morning shows the day.

SILICATE BOOK SLATES, BLACK DIAMOND SLATING, REVOLVING BLACKBOARDS, LAPILINUM (Slated Cloth).

THESE GOODS are in constant use by the BOARD OF EDUCATION of the City of New York (in every Public School), and have been for the past twelve years, which is a sufficient guarantee as to their durability and perfection. They are also in use by a large number of the BOARDS OF EDUCATION, Colleges and Schools throughout the country. The Private Schools have also adapted our Book Slates in preference to slate or paper pads—finding them more economical and more advantageous to the pupil. They are handsomely bound in fine black cloth, attractive in appearance, and finely finished. The BLACKBOARDS are well seasoned, and will last for years, slated on both sides with the celebrated BLACK DIAMOND SLATING. For sale by all the leading Houses throughout the United States and Canada. SEND FOR CATALOGUE. Patented and manufactured only by the

NEW YORK SILICATE BOOK SLATE CO., 191 Fulton Street, New York City.

TUNGSTEN BRONZES.

In the arts, tungsten bronzes of different colors are used, namely, golden-yellow, reddish-yellow, purple-red, and blue. The first two crystallize in forms resembling cubes, while the third is obtained partially in cubes and partially in amorphous pieces, and the last named forms prismatic crystals. Other circumstances being equal, the yellow bronze is obtained from mixtures poor in acid, the other two from those containing more acid. But the color is dependent not merely on the composition of the tungstate of soda salt, but also on the amount of tin and on the duration of the fusion, so that when much tin is used and the fusion long prolonged, a yellow bronze is obtained from a very acid mixture, and, on the contrary, a salt that is but slightly acid, when fused only a short time and with very little tin, may yield a red or even a blue bronze.

A mixture of two molecules of tungstate of soda and one of anhydrous tungstic acid, with tinfoil slowly added, and kept melted for one or two hours, will yield cubes one-half centimetre long (one-fifth inch) when 100-grammes (about 4 ounces) are melted, and they will produce a yellow or reddish yellow bronze, the powder of which seems light brown, and when stirred up with water it imparts to the liquid the property of appearing of a fine blue color by transmitted light.

The red bronze obtained from 10 parts of carbonate of soda, 70 parts of tungstate of soda and 20 parts of tinfoil yields, on pulverization, a powder that, stirred up in water, transmits green light.

According to J. Philipp, a blue bronze is always obtained if the fused mixture contains more than three molecules of tungstic acid to one molecule of soda; if the fused product is boiled alternately with muriatic acid and with carbonate of soda, the result will be a considerable quantity of fine blue prismatic crystals, with which there are intermixed, in most cases, single red and yellow cubes.

Moreover, all the tungsten bronzes obtained by fusion with tin can also be prepared by electrolysis of fused acid tungstates, but the yield is so small that it is unprofitable.

EXAMPLES OF PRODIGIOUS MEMORY.

A conductor must have a prodigious musical memory if he can, as Herr Richter usually does, conduct such a score by heart, never forgetting to beckon to any instrument at the very second wanted. I say prodigious musical memory, because the faculty of remembering is by no means a general, but a special one. One man may, as Richter, for instance, know a number of scores by heart, another may be able to keep an incredible number of figures in his remembrance, and not be able to retain the smallest musical motif. The Emperor Napoleon III., who never forgot a man he had spoken to, could so little remember a musical theme that you might have played the same thing twice over to him and given it two names, and he never would have known it. An example of the most astounding memory is the winner of the national chess tournament, Mr. Zuckertort. He is capable not only of playing a game of chess by heart, i. e., without ever looking at his board, but, being told his adversary's move, instantly replying with his countermove, and keeping the position, however altered, in his head; but, further, he played sixteen games at the same time in the same way—that is to say, before each of the sixteen tables sat a player with a board, and they informed him after each other of their respective moves; he replied, and never con-

founded one position with another, one game with another, never made a false move, but twice detected, where on purpose false moves were made to test him, the wrong direction. He performed an especially curious feat in the house of a friend, where there was a whist party, playing a game of chess by heart with some one in the adjoining room, and when the cards for whist were dealt he looked once through his cards, then put them away, and each time his turn came he mentioned the card he wished to play, all the while continuing his chess game, and never keeping either his chess or his whist partner waiting one minute for the necessary move. —Temple Bar.

The superior character of the shape novelties, advertising cards, Christmas cards, &c., pro-

duced by the firm of J. H. Bufford's Sons during the past year, has amply sustained the reputation it has borne in seasons past for producing goods of the best class.

A calendar in brown and gold, with inimitable French scenery etched thereon and bearing an appropriate motto each, is a novel feature introduced for the first time this year; also a box of tinted inlaid ivory and gold, in which to preserve each inscription as it is detached from the calendar. These are in brown old gold and plain seal brown colors, with a life-like likeness of the author or with Parisian winter views.

Among the visitors in town this week is Paul J. Schlicht, of Clague, Wegman, Schlicht & Co., Rochester, N. Y.

A REWARD OF \$100.

WE are informed that some unscrupulous persons are using and branding Pens with our Trade Mark, the word "MOHETA." We again caution all persons against using the same on Writing Pens, it being adopted by the undersigned, and registered in the Patent Office at Washington, D. C., March 25, 1879, and re-registered June 6,

1882. We therefore offer a Reward of \$100 (One Hundred Dollars) to any person that will give us such information as will lead to the detection of any person or persons infringing on the word "MOHETA," as above stated. December 13, 1883.

ASBESTOS ENAMEL.

Powdered asbestos is used by M. Erichsen, of Copenhagen, for making a special enamel or coating. It is mixed with soluble salts, such as silicate of potash and mineral or other colors, which combine with the silicic acid so as to form a product which withstands the action of oxygen, heat and atmospheric changes. This subject furnishes a refractory glazing, which protects porous materials, and which can be applied to brick walls and to constructions of stone or cement. When it is employed on masonry or on wooden articles, the surface is first washed with soap and water. In the manufacture of this enamel or paint, it is only the refuse of the asbestos which is employed, and this refuse, it is said, would be worthless for any other purpose.

R. R. Watson is about to bring out a new coin and letter scales. This will weigh anything from a ten-cent piece to a \$20 gold piece. The balance bar has three different scales, two for gold and silver coins, marking the actual weight of the various denominations, and a letter scales. It is a very handy contrivance.

Aikin, Lambert & Co. have adopted the custom of supplying dealers in their line ordering from them with handsome show-cases in which to display their goods. They have also designed a number of fancy trays for small dealers whose store arrangements will not admit of a show-case display. The firm also supplies a variety of signs, show-cards and printed matter to assist dealers in pushing sales.

PARCHMENT PAPER.

To make good parchment paper it is, above all, necessary to select good, unsized paper, free from foreign filling, made of pure vegetable pulp, and so dense that no pin-holes can be observed in it when it is held up to the light. It should be made of long-fibered material if possible.

If parchment paper can be made from an endless roll, the resulting product will be much nicer, because it is kept on a gentle stretch the whole time that it passes the different parts of the machine, and is finally ironed and calendered. If the sheets are dipped singly, some contrivance must be adopted to keep the paper on a stretch while drying, as it will otherwise curl and twist, and will become very brittle, particularly at the ridges of the curls.

When made on the large scale, paper wound on a roll is drawn first through sulphuric acid, prepared by mixing 2 volumes of concentrated sulphuric acid with 1 volume of water, and allowing to cool (according to others, the proportions are 1,000 parts of sulphuric acid to 125 [or more] parts of water)—where it remains from 5 to 30 seconds, according to the thickness. It is then immediately drawn through water, next through dilute ammonia, then again through plenty of water, and finally passed between heated rollers, where it is dried.

In place of sulphuric acid, phosphoric acid has been employed with success; also a syrupy solution of chloride of zinc, free from excess of acid and heated to between 50° and 100° C.

It has been recommended to saturate the paper with alum before drawing it through the sulphuric acid. This has been found to render it less liable to be made rotten by the acid. The latter acts more on the surface and the paper loses neither its flexibility nor its transparency.

During the treatment with acid, the surface of the paper is converted into a sticky form of dextrine. It is, therefore, easy to prepare thick pasteboards by piling a number of layers on top of each other.

Artificial parchment or parchment paper has also been called *papyrin* and *membranoid*.

TILE OR CHINA PAINTING.

Much really effective work is done in simple outline or monochrome or one color. All that you need to begin with are a few tubes of china or mineral colors. Lacroix colors are the best, as they are all ready for use, needing but a drop or two of spirits of turpentine or oil of lavender to reduce to a good working medium; one or two camel's-hair brushes, a palette knife, a palette or china plate, in which to mix colors, spirits of turpentine or oil of lavender. For colors, get ivory black, capacine red, ultramarine blue, carmine No. 2, sepia and apple green; or if you do not wish to make too many experiments, black and carmine will be sufficient. These are the simplest colors, and for an amateur all that is needed. You know to become permanent the articles must be fired, fused or baked in a kiln, the success of painting depending much on the firing. The chief trouble is that during the process many of the colors change entirely. Some will not bear mixing, and others eating up or destroying any color painted over them. White is scarcely to be trusted at all, the groundwork being left plain after being outlined. Outline designs are so plentiful now that almost every family has in its possession children's books with quaint little German figures, pictures from "Pretty Peggy," flower designs, which will become, when used for decoration,

"things of beauty and joys forever." To prepare for work the article must not have seen active service in a dish-pan, otherwise the work is destroyed. First cleanse the surface with spirits of turpentine; this is to enable it the better to receive designs; if you can draw, so much the better. Sketch plainly with hard pencil; if not able to do this, take some very thin paper and trace a design; on the wrong side go over the tracing with a very soft pencil so as not to reverse figure or pattern. Now lay the soft pencil side on the article to be decorated, and while holding firmly rub on impression; if indistinct in any part trace it with hard pencil. If either of these methods are not easy procure some carbonized tracing paper, to be had in black or red, at about five or six cents a sheet. Suppose design to be only in outline of black, squeeze a little paint from the tube upon the palette; to this add a drop of oil of turpentine; rub smooth with palette knife just thin enough to work easily; if it should dry out too rapidly add a little more oil or turpentine. Paint outline very carefully, touching every point. Beautiful designs may be made after outlining by filling in with plain or flat colors, without shading. When completed send article to china bakery or kiln, accessible in all large cities, the price varying according to the size of article, small pieces costing ten cents each. Plain china tiles, decorated to act as a stand for a teapot, fitted into a frame for a jardiniere or flower-box for window, a series of designs on successive tiles for fireplace decoration and so on *ad infinitum*, the ingenious workers are able to supply the thousand and one things not to be mentioned in limited space.

EXCHANGE OF POSTAGE-STAMPS.

The Postmaster-General has issued the following circular letter to postmasters:

"In consequence of the recent reduction in the letter rate of postage, postmasters are directed to exchange for the public as applications may be made the three and six-cent denominations of postage-stamps and stamped envelopes for others of different denominations. Postmasters are informed that under no circumstances must money be given in exchange for stamps or envelopes—stamped envelopes will be exchanged at their full current rate. Stamped envelopes bearing printed cards and special request, as well as ordinary stamped envelopes, are to be exchanged; also stamped envelopes that bear printed addresses. Stamps and envelopes of issues prior to 1861 must not be exchanged."

The growth of the papeterie business, and the active competition among the large manufacturers of these goods, coupled with the demands of the trade for variety and novelty of designs, has resulted in placing upon the market, for the coming season, of one of the best lines ever shown. J. L. St. John, resident manager for the Powers Paper Company, speaking of the new spring line in these goods, states that he has some new ideas to present to the consideration of buyers who are desirous of obtaining original novelties—both in style of boxing and contents and outside shapes and decoration. This house is also constantly shipping large quantities of envelopes, flat papers, ruled goods, &c., to South America and Mexico without interference with its domestic trade. Before placing orders buyers should inspect this line. The New York office is at 62 and 64 Duane street.

EYELETING AND PUNCHING MACHINE

The cut illustrates an eyeletting and punching machine, on which several useful improvements have recently been made. It is said to easily punch through fifty thicknesses of ordinary writing paper, and to set the heaviest and longest eyelet that is made. The frame is heavy and stiff, and, although there is a reach of seven inches back of the plunger, no spring in the frame is perceptible. The plunger is of steel, $\frac{3}{4}$ of an inch in diameter. It has very long bearings to steady the punch, and where irregular shaped holes are required a key, or feather, is inserted to prevent the plunger from turning around. The leverage is long, and, therefore, requires little power to operate it. A screw on top of the press, on which the lever strikes, can be so adjusted that the plunger will set the eyelet solid, and yet avoid the possibility of defacing or injuring the lower set, by which means the tools are kept in order for a long time. The most important features on this machine are the iron table, which is planed perfectly flat, on which to lay the goods, and an adjustable gauge to square the work. To this gauge is attached an extensible piece to take any size of card. A stripper is also added, to be used when punching, and saves the trouble of pulling off with the fingers, and leaves the goods flat instead of buckling up or defacing the paper. When using the machine for eyeletting, this stripper can be thrown up, back or front, out of the way. Interchangeable punches and dies, also eyelet sets for any size eyelet, can always be found in stock to fit this machine. The manufacturer is E. B. Stimpson, New York.

COMMON SENSE HOUSE DECORATION.

The following on house decoration was written for the *Furniture Gazette* by Louis F. Day: "No doubt there has been within the last ten years a sort of reawakening of the public mind to the fact that art is of wider application than our fathers supposed—and something like a craze for decoration has ensued. But we cannot put great faith in the efficacy of this or any other fashion. Already there are signs of the ebbing of that wave of—shall we call it taste?—that passed over society. The newest departures in fashion are not in the direction of beauty. And, although the subsiding fashion leaves after it a deposit of feeling in which a living decorative art may take root and grow, the development of that art is in the far, far future. Any lasting improvement can only be very gradually brought about. The æsthetic mania, apart from its in many respects absurd manifestation, is too obviously the result of emotion and not at all of conviction. And it may safely be predicted that those who gush with most effusion over English-Dutch architecture and English-French ornament, or whatever else may be included under the comprehensive name of Queen Anne, will not be the last to follow the lead of fashion in any newer direction, and adopt the least restrained forms of design and

the crudest scale of color that may be pronounced 'the thing.'

"Fashion, it is said, will have its way, and we waste our breath in railing against it. It is even assumed that, the power of fashion being what it undoubtedly is, we must hold a candle to it, and first make sure of its co-operation in any form that we desire. But it is hopeless to think of making common cause with a power that is heart and soul against you, a power that will work with you only for its own opposite ends, and will turn on you as soon as it has squeezed from your project all it can get for itself. There may be no great good in protesting against the power that is, but there is none in prostrating ourselves before the idol. It is

us have been known to carry on a flirtation with fashion (more or less dangerous, perhaps, but none the less delightful on that account), and the most fashionable of us have intervals of sense. But everywhere, from the building or choosing of the house we inhabit to the smallest nicknack with which we furnish it, the two considerations are at war within us—the considerations, namely, of the thing we want, and of what is supposed to be 'the thing.' You may say that what you want is to be in accordance with the mode, then I have nothing whatever to say to you. To me, and, I think, to every artist, the correct thing is the fit thing, and not the thing in vogue. The reasonableness of decoration is in its fitness, and the fitness is the one test of its worth."

:o:

CHANGE IN POSTAGE RATES.

Under a recent decision of the Postmaster-General, lately referred to, articles sent by mail as merchandise, or as samples of merchandise, are to be rated asailable matter of the fourth class and charged with postage as such, at the rate of one cent for each ounce or fraction thereof, notwithstanding any printing such articles may bear or contain. The opinion of the Postmaster-General, of which a copy has been furnished to Postmaster Pearson, is to the effect that "it was never the intention of Congress to classify matter which can have no value other than that of merchandise as printed matter because of any printing it may contain." Superintendent and clerks at the post-office and its branches have been instructed that they are to be governed by the above decision in their action with respect to the matter therein referred to, and that the following articles, among others, heretofore treated as third-class matter, are henceforth to be considered and charged as matter of the fourth class, when sent as merchandise or as samples. Labels, patterns, playing-cards, photographs, lithographs, engravings, samples of printing, valentines, fancy lithographed and engraved (including Christmas, New Year and Easter cards), address tags, scrap pictures, and in general all articles which are evidently sent as merchandise or samples, although bearing printing.

It has been further decided by the department that blank-books, desk-blotters, with or without printing thereon, and also maps, prints, show-cards, &c., printed on or attached to other material than paper (which includes cardboard), or mounted on rollers, or with metal bindings, or in frames, should be rated as matter of the fourth class; but copybooks and drawing-books, containing printing, remain as heretofore in the third class.

One of the cheapest and best edited poultry journals published in the West is the *Quarterly Poultry Advertiser*, published by James Donaldson, Kenosha, Wis. The October number is full of valuable reading matter on breeding and the general care of fowls. It is well worth its subscription price.

EYELETING AND PUNCHING MACHINE.

not so that idols are overthrown. And whoever would see common sense, common rightness, common decency in the dwellings we live in, and in all the thousand things we live with, must be so far inconoclast as to lend his voice to the upsetting of the Fetish that rules that we shall live, as most of us do live, with so little regard to thrift, and cleanliness, and beauty, that we should say it could not be so if we did not know that so it was.

"The difference between fashionable and common-sense decoration is not superficial, but radical. They start from two distinctly opposite positions, and are propelled and regulated by two distinctly opposite considerations. Fashion concerns itself first and last with what certain other folk do, or are likely to do, and accommodates itself accordingly. Common sense considers what it itself wants, and goes as straight as it can to the accomplishment of its desire. Men and women do not, of course, divide themselves into persons of fashion and persons of sense. The most rigidly sensible of

BORAX VARNISH.

It is well known that shellac dissolves in borax solution, and this solution is often utilized for various purposes, both as varnish and cement. The following are the proportions employed: Ten parts of borax, thirty parts of coarsely pulverized shellac and two hundred of water. It is dissolved by warming on a steam bath for a few hours. When cold it may be filtered. To make it more pliable add a few drops of glycerine. It may be given various colors by introducing soluble pigments; for black it is recommended to use soluble nigrosine; red varnishes are obtained by adding eosine or fuch-sine; for blue, either methylene blue, alkali blue, or marine blue; for green, use malachite green or brilliant green; and for violet, methyl violet. The black borax varnish, colored with logwood, &c., is used for polishing ladies' boots and shoes, being cheaper than alcoholic varnishes. Borax varnish can be employed for dry-plate photographic negatives, as it may be flowed on while wet.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Homellsville, is certainly deserving "honorable mention." Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—Ex. U. S. Minister, E. B. Washburne.

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—New York State Engineer's Report for 1881;

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all others from the Cincinnati Industrial Exhibition, Massachusetts Charitable Mechanics' Association, Franklin Institute of Philadelphia, Louisville Exposition, Medal and diploma from United States Centennial Commission, Medal of Progress American Institute, 1877, and Medal of Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger Paper, has a longer fibre, and is, consequently, tougher. 2. Having a harder and better body, it frays less in erasure, so that by simply using the rubber after the eraser, the ink is prevented from spreading. 3. It is more uniform in Weight Color and Finish. 4. It never cockles if properly bound. 5. Its chemical action upon ink is such that it both writes and rules up better. For proof of the foregoing, refer to a large number of Stationers, Bookbinders, Bookkeepers, and Recorders, who have given it, after a severe test, the preference over all others. This paper is Double Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is - ter-marked with name and date.

"The Stationer"—Every Thursday—\$2.00 Per Annum.

VOL. XIV.---NO. 26. NEW YORK, DECEMBER 27, 1883. WHOLE NO. 444.

Correspondence.

CINCINNATI FILES.

[FROM OUR REGULAR CORRESPONDENT.]

CINCINNATI, December 24, 1883.

"How are your Christmas sales as compared with those of last year?"

"Prince William" has asked this question a score of times, more or less, of not less than a score of booksellers and stationers. Answers were pretty much the same from all of them. Robert Clarke & Co. say: "We never did sell as much at any Christmas holiday season before." Peter Thompson says the same, and so do Pounsford & Co., W. B. Carpenter & Co., Peter Thompson, Davie, Derby, Warren—in fact, all of them.

"What are people buying?" asked the afore-said inquisitive person.

"Oh, they buy Christmas cards, toy books, juveniles and all sorts of standard books and photographs and pictures."

A very notable success was somebody's miniature theatres. Hawley sold dozens of them, and he says the very highest-priced one went off best. Robert Clarke & Co. say that they sold more of these in the way of jobbing than they did at retail. But there has been sale for nearly everything a stationer keeps in the line of holiday goods. Toilet ornaments and cabinets have had a good run. The Dennison Manufacturing Company had a good trade in this line of goods, both in jobbing sales and in retailing. The Globe Files Company turns out several lines of goods suitable for holiday presents, and is deriving benefit from its enterprise in this direction. But the Christmas cards take the shine. It is really astonishing how they do go off. The splendid style in which they are executed mechanically in the printing, and in the way of art in the designs and coloring, make them treasures of which the people are not likely to grow tired.

"Are you making any money on your sales?" was another question which your representative at the court of Cincinnati asked the dealers. "I'll tell you privately," said one, "we never sold on closer margins." This was a bookshop keeper, however, and it is an open fact that book dealers are marking their books down to get even with the dry goods palaces, which have attached a cheap book department to their regular business as a sort of tail to it. But the same story came from stationers, and it comes from men in every line of business. The proprietor of a type, stereotype, engraving and printing press establishment said to your watchman on the walls: "I never made larger sales

and I never got prompter payment for my stuff than I did during the year just closing, and I never made less money on what I did sell. You see the margins are so very small." Everywhere one hears the same story, and it's an old, old story, only that this year it is told with a slight variation. Five years ago—three, two years ago—yes, last year—it was "small margins," "small margins;" now it is "smaller margins," "smaller margins." The next step is into "smallest margins," and after that—what? Some very discreet merchants are fearing that this cutting down of margins is brought about by the impatience of dealers, who are unable or unwilling to wait till trade comes to the turn in the lane which will take it out of its present tedious stretch of dullness, and these same discreet merchants say that if their fears on this subject are well founded, then there is real danger ahead of some of those who are adopting this policy.

"How is general business?" was what your pen proxy in Cincinnati asked a leading dry goods merchant, whom he met in a book store laying in a supply for Christmas. "Dull just now, but healthy. Money is plenty, and loans can be had cheap on good security. It is no starving time for a man of means and capacity, but for men without sufficient capital and for incompetents and adventurers, the times are a little tough."

PRINCE WILLIAM.

BOSTON GOSSIP.

[FROM OUR REGULAR CORRESPONDENT.]

EASTERN OFFICE LOCKWOOD PRESS,
49 Federal St., BOSTON, December 25, 1883.

Long expected, come at last, and now gone—that's Christmas. How some of us revelled in dreams of bright anticipation; or rather expected something that came not. No doubt the snow was too deep and the wind too cold and bleak for my Santa Claus to venture out. But it is all over now, and the strain and excitement of the day are over too. The heavy dealers in holiday goods can now rest a little while their cash accounts are being footed up. The poor, weary, overworked clerks who, from early morn till far into the night so faithfully served their masters and the public, may now begin to gather up the tail ends and "take stock," for a new year is about to open and trade must make a fresh start. One can now ride in the street cars without the fear of getting his eyes punched out with a bundle, or of being thumped in the back with a box. And now since the cars don't carry so much freight there is more room for passengers. Then let us be thankful that the rush and

excitement of the season is only of short duration and that it is now over. A little rest, and then the trades begin to plan another business campaign. But the poor newspaper man, there is no rest for him. The printer's devil whom he serves is an insatiate imp, and calls loudly for copy; and as I sit to write, with an aching head, a disordered stomach, and with scanty notes, methinks I hear him howling for that Boston correspondence. Now help me, ye muse of the "pencil tribe," and if this does not reach him in time I will blame the mail, for the mail has been very full of late. And now for my notes.

Cotton & Gould report that during the past year their trade in blank-books has been very large, though mostly local. In fancy stationery they do but little, and they are carrying only a line of staple goods. The Yankee letter file and binder which this firm manufactures, and which at one time enjoyed ready sale, is almost forgotten by the trade, although the firm still displays that useful article upon its counters. It seems a pity to let such a good thing die out for the want of a little publicity through printers' ink. This firm is about to present to the trade a neat little pocket diary. In size, it is about two inches wide by four long, very substantially bound in leather, and just the thing for carrying in one's vest pocket. For each month of the year are ruled pages for "accounts due," for "cash account," and for daily "memoranda;" a few pages for "names and address," and pages also for general notes. The arrangement of the pages for these special uses makes it a very useful and handy little pocket diary. About a year ago, Mr. Cotton designed this diary for his personal use and finding it so convenient had it copyrighted, and prepared for its manufacture. The diaries are now ready for the trade, but their sale depends upon this—whether the firm covers them with a bushel measure, or shows them up in a good strong light. What the eye don't see, the heart can't crave for.

The lower end of State street is a little too far removed from the retail centre of the city for holiday goods and consequently the stationers in this locality were not rushed to death with the Christmas trade. What these dealers carry mostly is staple and commercial stationery. In these lines Aaron R. Gay & Co. carry a very extensive stock. Their biggest trade is in blank-books, and just at this season they are turning out large orders. Though the house does some little jobbing trade with the Eastern States, the bulk of its business is local. This house has been established since 1847, and for all these years was located at 130 State street, until some

six months ago when the firm removed to 122, only a few doors away. This change gives the house better facilities for the printing and manufacture of blank-books.

Doane & Greenough were interviewed under difficulties, a bursted steam pipe requiring the attention of all hands; so I quietly stole away and left them "alone in their glory." W. S. Greenough has just been appointed to serve upon the staff of Governor Robinson, with the rank of "colonel." I mention this not as a cause of the bursted steam pipe, however.

Another State-street stationery house is Thos. Groom & Co. If I mistake not, this is the oldest house in the city in the stationery line, having been established over fifty years ago. The firm's reputation for reliable goods increases with its years. One of the most important branches of the firm's business is the manufacture of account books. In this department its facilities for production are second to none. The material used is of the very best, the aim being to present to the trade only first-class goods. It imports very extensively of English and French goods, and carries large stocks of commercial and fancy stationery. In writing fluids and copying inks the products of all the prominent manufacturers are found here. Inkstands, from the cheapest glass ink-well to the most expensive foreign bronze library-mounted trays, are displayed, as is also an endless variety of fancy stationery and stationery hardware. A very pretty inkstand and a cheap one, jobbing for \$8 a dozen, was shown. The bottle is of cut glass, mounted upon a polished oak stand, which presents several receptacles for paper and envelopes, and having also a pen-rack. It is ornamental as well as useful. As specimens of its lithograph work, the firm is distributing among its patrons some very pretty pocket calendars for the new year. A. L. D.

PHILADELPHIA NOTES.

[FROM OUR REGULAR CORRESPONDENT.]

OFFICE OF THE LOCKWOOD PRESS,
150 South Fourth Street,
PHILADELPHIA, December 26, 1883.

The two failures—George McDowell & Co. and G. W. Arms & Co.—happening within a few days of each other, show the urgency of a new bankrupt law which shall speedily put an end to the unequal treatment of preferred and common creditors.

As far as G. W. Arms & Co. are concerned, the sale of the stock, after deducting expenses, will nearly cover the \$3,500 which are comprised in the preferred claims. The only hope of a dividend for the other creditors is in the collection of the book accounts, which may realize 30 per cent. of the \$1,500 due.

If we examine the failure of Geo. McDowell & Co., it will probably result that the position of the common creditors will be still worse. Although the exact amount of the liabilities of this firm are not officially announced, and the proceeds of the sale of the stock which took place last Monday are not disclosed, enough is known to say that any surplus over the \$56,000 preferred claims depends entirely on the sale of the Manayunk paper mills; but as this is a bad time for such a sale, which the sheriff will necessarily make as soon as possible, the hope of a dividend for the common creditors is more than doubtful.

If an equal division of the assets in these two failures had been made among all of the creditors, it is probable that each one would have received 80 per cent.

It is plain that under the distribution of as-

sets as at present the common creditors pay the preferred creditors.

This kind of distribution is unjust, but what makes it still worse is that certain preferred creditors have the right to immediately dispose of the assets under the sheriff's seizure without any regard for the interests of the other creditors, who, if they only had sufficient time, could recover a good part of the stock.

There is, therefore, urgent necessity for an equitable law which shall keep preferred claims within proper limits, and abolish as well the system of confessed judgments and chattel mortgages. It is also desirable to keep the assets of bankrupts out of the sheriff's hands, inasmuch as liquidations by such means are costly and the charges are enormous.

The retail trade in Philadelphia was very satisfactory during last week.

A great demand for Hoyer's manuscript paper is reported. For blank-books, ledgers, legal papers and copy-books, its sale is very good.

J. VIENNOT.

ART INDUSTRIES AND FOREIGN TRADE OF FRANCE.

The important advance which France has made in her commercial and industrial resources in the last quarter of a century betokens at once the energy of her people and the enlightened character of the policy by which her material interests have been built up. In her foreign trade she has been notably befriended by the consummate genius evinced in design and skill in workmanship. Prominent among her famous industries are textile fabrics, decorated ceramic ware, innumerable fantasies in art objects, and the constructive arts in general. Many of these products, characteristically French in their style of rendering, are allowed to be all but inimitable. Exhaustless inventiveness in embodying novelty, beauty or other form of excellence, combined with the power of eliminating new styles of fashion from such as reign so as to avoid too abrupt transitions, and rendering these so acceptable as to enable her to take the lead of the world in matters of taste, have secured for her manufacturers large and profitable markets. Fashion is itself an element of value in trade, and the ability to be the first to place those that will secure the public preference has been of untold advantage to her manufacturers. Textile goods, which constitute a large proportion of French exports to European markets and this country, are conspicuous, as all are aware, for their high finish, exquisite tones of color and effective harmonies and pleasing contrasts in hues of patterns. That with the progress that is being achieved by other nations in art industries, the ratio of increase in her foreign trade is liable to be reduced is a foregone conclusion. Our own rapidly developing silk manufactures may be instanced as affecting one most important branch of her textile productions; so also the improvements here carried out in soft mixed goods. Abroad, the competition of England and Germany is being especially felt by French manufacturers. England, owing to improvements assiduously introduced into her machinery and the rapid progress she has made in art industry since 1851, has been enabled more completely than heretofore to meet the demand for tasteful goods, and this with increasingly rapid production, while German designers and artists have shown of late years a previously unsuspected ability to turn out art products scarcely distinguishable from those of France. This foreign competition has been materially aided by the change that has come

over the methods and course of trade from the general disposition of jobbers to buy only for immediate requirements, thus distributing their purchases in each season over a longer period, so affording opportunity to English, German and Belgian manufacturers to produce in good time rival designs or imitations with such modifications as may be suggested. The French manufacturers on their part endeavor to meet this by changing styles more rapidly, but the taste of buyers, less amenable to the decrees of Paris, fails to respond with its former promptitude. The effect on French trade is more apparent at this time, when, from general influences in operation, all trade is more or less depressed. The circumstance of the falling off in the export of French manufactures the present year as compared with 1882, although the deficit is represented by only a few million francs, has, together with the unfavorable position of the cotton and woolen industries of France, had the effect of exciting attention to the causes operating in France itself to check the development of her trade.

The situation has elicited both from her manufacturers and certain other political economists very decisive opinions. The former particularly point to the heavy transit charges of the leading railway companies, the more severely felt as most of the great centres of industry lie inland. The companies are held by their contracts with the State not to exceed certain maximum rates for specified classes of goods, but the complaint is that they never fail to enforce these maximum rates. For their persistence there is apparently no corrective. The economists on their part affirm that manufacturers have exhibited a want of enterprise in not keeping pace with improvements in machinery, but for any deficiency on this score the long political agitations of the country are surely in part chargeable. The heavy cost of change of plant can only be readily incurred with the assurance of continued commercial stability in the future. The allegation of the manufacturers that the heavy debt incurred by the last war has made everything dear would seem more to the point in considering the influences operating on cost of production. The economists go so far as to affirm that there is a positive decline in French art industries, an avowment that cannot surely be put forth in the sense of any lack of ability on the part of French designers to hold their own so far as skill is concerned, though possibly taking into account the mercantile necessity of producing medium and cheaper goods, with some falling off in the demand of the production of costly and elaborate articles of luxury. As to the future, the want of an effective system of apprenticeship is complained of, such as would train up skilled workmen; but as to this point, England, whose trade guilds long since lost their domination, is in the same position, while in Germany the bonds of union in the different crafts, making regulations that secured the efficiency of workmen, are being sensibly weakened. To establish the position of at least a prospective decline, it is alleged that in the trade and art schools there is an absence of a proper system of education, the methods adopted leading pupils to acquire a distaste for mechanical pursuits. If this be so, the remedy is sufficiently apparent. The truth is, that between all industrial nations, as time goes on, competition will become more intensified and changed conditions must be met, not merely by new economies introduced into manufactures, but by the exercise of increased mercantile sagacity.—*Bradstreet's.*

OLD BERKSHIRE MILLS

CHARLES O. BROWN, President.

DALTON, MASS., U. S. A.

JOHN D. CARSON, Treasurer.

One party writes: "The two hundred RECORD BOOKS, for 83 of the 99 Counties, now on exhibition at the Iowa State Fair, at Des Moines; and all, but four (!) of them, made from your 'OLD BERKSHIRE MILLS LINEN LEDGER,' Medium, 40lb., make a splendid show."

[The above cut is a fac-simile of the wrapper used on the Linen Ledger Paper.]

We will pay for any book rejected on account of fault in the paper. Send for Samples, test them in comparison, and see that your books are made from paper thus water-marked.

SUPERB VALENTINES FOR 1884.

PURE and chaste in sentiment, the combined work of our best American artistic and literary talent, our line of Valentines for 1884 cannot fail to receive the support of the most refined class of buyers.

We have been guided in their preparation by the success in former years, and by the expressed wants of the trade.

The following artists, among others, are represented:

MISS L. B. HUMPHREY,
MRS. O. E. WHITNEY,
MISS ROSINA EMMET,
MISS L. B. COMINS,
MISS ALICE W. ADAMS,

F. S. CHURCH,
HARRY BEARD,
C. Y. TURNER,
H. GIACOMELLI, of Paris.
F. SCHUYLER MATHEWS.

A varied assortment of Valentines by the above-named artists is offered in plain form, and single and double silk fringed.

ENVELOPES furnished with almost all our Valentines, without extra charge.

BACKS.—We again beg to call attention to the elegantly-designed backs, which are a special feature in our cards.

SATIN PRINTS.

Besides a number of FLORAL DESIGNS mounted in a variety of novel styles, special attention is called to our finest production in this line,

THE "LION IN LOVE" VALENTINE.

This is a rich satin print, on an elegant fancy plush mount. The design is after F. S. CHURCH'S important work of above name. The poetry is by J. V. CHENEY. The picture is of the greatest artistic merit, and, on its elegant mount, forms, what we think, one of the most unique, artistic and sumptuous St. Valentine Souvenirs ever offered to the public.

Retail Price, in a neat suitable box, \$10.00.

DESCRIPTIVE PRICE LISTS OF OUR VALENTINES ARE NOW READY.

Besides our Valentines, we call attention to our NEW BIRTHDAY CARDS, including SATIN ART PRINTS, NEW SCRIPTURE TEXT CARDS, NEW COPIES FOR PAINTING, &C.

Our line of EASTER CARDS and EASTER NOVELTIES will shortly be announced.

Trade Topics.

NEW PATENTS.

No. 288,199. Composition for Dry-Stamping, &c.—Francis L. Bird, Elizabeth, N. J.

A composition of gum or gums, including rosin, with powdered aluminium bronze and powdered white-metal bronze combined.

No. 288,203. Stereotyping Outfit.—Thomas Bradwell and Samuel K. White, Chicago, Ill.

No. 288,204. Paper-Bag and Twine-Holder Combined.—Albert Brown, Mendocino, Cal.

The combination, with a bag-holder, of a twine-holding device, consisting, mainly, of a semi-spherical shell hinged to the top of the same, and having a laterally-extended slotted arm adapted to engage a fixed staple, and a locking-hook pivoted to the top of the bag-holder.

No. 288,254. Paper Box.—Harvey S. Munson, New Haven, Conn.

No. 288,255. Paper Box.—Harvey S. Munson, New Haven, Conn.

A paper box having a tubular body provided with flaps for closing one or both of its ends, and provided with a lining attached to the inside of its body, that may be folded to close one or both of its ends independently of its folding flaps.

No. 288,265. Toy.—Charles F. Shourds, Newark, N. J.

No. 288,272. Toy Pistol.—Elbridge J. Steele, New Britain, assignor to James Watson, Jr., Bridgeport, Conn.

No. 288,277. Index.—Lewis B. Tebbetts, St. Louis, Mo.

No. 288,278. Index.—Lewis B. Tebbetts, St. Louis, Mo.

No. 288,285. Book-Mark.—Morell A. Webb Marengo, assignor of one-fourth to Frank W. Bailey, Chicago, Ill.

As an improvement in book-marks, the combination, with a book having a slot passing through its leaves, of a marking strip passed through the slot, and having its ends projecting from the same, the strip being arranged to slide in the slot to form loops between the pages.

No. 288,290. Fountain-Pen.—Paul E. Wirt, Bloomsburg, Pa.

The combination, with the holder or reservoir of a fountain-pen having an interior longitudinally disposed groove, of a plug arranged to carry the pen and fitted neatly in the lower end of the holder, so that it can turn therein, the plug being provided with an ink-channel leading to the pen, and having the grooves at its inner mouth gradually decreasing in depth and width from the mouth, the ink being fed from the groove in the holder to the mouth of the channel.

No. 288,329. Calendar.—Henry S. Hack, Taunton, Mass, assignor, by mesne assignments, to Emily F. Hack, same place.

No. 288,349. Label Printing and Perforating Machine.—Wm. R. Landfear, Brooklyn, N. Y.

The combination, in a machine for printing and perforating strips of labels, of a printing-cylinder and an impression-cylinder provided with punches and dies adapted to cut a series of holes in the strip without entirely freeing the paper cut in forming the holes from the strip.

No. 288,370. Paper-Ruling Machine.—Geo. Schwemlein, Cincinnati, Ohio, assignor to J. R. Mills, & Co., same place.

No. 288,372. Tellurian.—Albert C. Shaw, San Francisco, Cal., assignor of one-half to Geo. H. Fuller, same place.

No. 288,373. Eyeletting-Machine. George Shipman, West Bridgewater, Mass.

No. 288,385. Hand-Stamp.—George Van Zandt, Oak Park, Ill.

No. 288,404. Attachment for Printing Presses.—Francis M. Brooke, Philadelphia, Pa.

No. 288,419. Stenographic Machine.—John Galloway, New York, N. Y.

No. 288,476. Toy Racecourse.—Jas. D. O'Donoghue, Brooklyn, N. Y.

No. 288,495. Bag or Satchel.—Louis Sanders, New York, N. Y., assignor to Eliza Sanders, same place.

A bag or satchel having a metallic frame at the upper part and a body made expansible at the sides and bottom, the bottom being re-enforced by intermediate stiffening-strips arranged longitudinally side by side between the covering and lining, forming a hinged joint between the strips along the middle line of the bottom, which permits the said strips to fold inwardly when the satchel is empty, while they cannot sag outward when it is full.

No. 288,539. Purse.—George B. Adams, Newark, assignor of one-half to James Hardman, Jr., Belleville, N. J.

No. 288,594. Passenger-Ticket.—John M. Reynolds, Oswego, N. Y., assignor to James H. Mandeville, trustee, Washington, D. C.

No. 288,598. Fountain-Brush.—John Stevens, Neenah, Wis.

The combination, in a fountain-brush, of a reservoir, a brush, a tube leading from the reservoir into the body of the brush, and having a lateral opening inside the reservoir close to the wall thereof, a valve closing said lateral opening, a valve-rod, and spring to hold said valve closed, and a diaphragm above the end of the valve-rod and exposed externally.

No. 288,605. Toy Target.—Stephen L. Woodruff, Chicago, Ill.

DESIGNS.

No. 14,405. Font of Printing Type.—James M. Conner, New York, N. Y. Term of patent, 14 years.

No. 14,409. Font of Printing Type.—William W. Jackson, Philadelphia, Pa., assignor to Farmer, Little & Co., New York, N. Y. Term of patent, 7 years.

No. 14,410. Font of Printing Type.—William W. Jackson, Philadelphia, Pa., assignor to MacKellar, Smiths & Jordan, same place. Term of patent, 14 years.

No. 14,417. Panel.—Louis De Planque, Jersey City, N. J. Term of patent, 3½ years.

TRADE-MARKS.

No. 10,712. Playing Cards.—Margaret F. Milward, Jersey City, N. J.

"The figure of a king's jester, of such dress and attitude as will conform to this character, having in the left hand a card with the picture thereon of a jester and the word 'Joker.'"

A kind of tracing paper, which is transparent only temporarily, is made by dissolving castor oil in absolute alcohol and applying the liquid to the paper with a sponge. The alcohol speedily evaporates, leaving the paper dry. After the tracing is made, the paper is immersed in absolute alcohol, which removes the oil, restoring the sheet to its original opacity.

Among the novelties displayed, the ivory plate, with a photograph inserted in a crimson plush frame, is the newest. These have various colored bows and true lovers' knots ornamenting them. They cost \$5 and upward. A flesh-tinted ivory plate, with holly and mistletoe for a groundwork, and deep claret frame, is one of the handsomest of these designs.

FIGURED SILK.

China was the first among nations to weave figures in its silk textiles, and slowly has the art spread westward, leaving its distinguishing marks on the fabrics of India, Persia, Syria, Byzantine, Greece, Italy, Sicily, France and even England; and may not America soon have its own? The Chinese designed two thousand years ago, and their style is the same to-day. The Persians wrought into their stuffs the images, real or fancied, of beasts, birds and trees. The Byzantine Greeks, in the sixth century, had a school of design, which left a strong and beautiful impression on their rich products of silk. Subjects of the designs were largely inspired by the teachings of Christianity, and appeared in human or animal forms. The delicate designs of Florence in the fourteenth century are still preserved in some of the museums of Europe. Sicily first received its inspiration in the art of fabricating silk from the Mohammedans of Africa, who introduced and fixed on Sicilian designs Arabic forms and figures. England is not without examples of great excellence in its silken stuffs, woven by women in the fourteenth century. In all countries, and among all nations, from China to Spain, wherever the ancient art of fancy weaving was practised, the figures woven in silk textiles were the ideal of what nature furnished, either in the real or in the imagination.—*The Journal of Fabrics.*

A BONANZA IN CLAY.

The Bismarck (D. T.) *Tribune* of a recent date says: "Specimens of pottery manufactured from clay three miles east of this city were brought to the *Tribune* office yesterday, and in appearance, texture and apparent durability they compared favorably with the best imported pottery to be found in the hands of dealers. Among the specimens, which were made as experiments, were handsome jars, cute little jugs, and square blocks of the clay which had been tested in a heat sufficient to melt ordinary brick to a glassy substance. This industry promises to be a gigantic stride toward Bismarck's prominence as a manufacturing centre. On this land, which is the property of O. W. Bennett, several grades of clay exist. There is material for the manufacture of common and pressed brick, fire-brick, and Bath or Bristol brick, the latter being used for polishing ivory, silver, and various other hard surfaces and ornamental substances. Terra-cotta of the handsomest color and most tenacious texture has already been made. The coal for burning the clay is found on the ground, and already a contract has been entered into by King & Jackson, of Ohio, for the manufacture of four millions of brick next spring. The pottery on exhibition yesterday was compared with the Ohio wares in the store of Whitley & Bushman, and proved to be equally fine, if not superior. Wood for operations in the spring is already being hauled to the ground, and an immense manufacturing centre must soon be built up in that locality. There will be no further need of sending to Eastern cities or foreign ports for pottery, Bath brick or crockery of any description. It will be made at home, in the capital city of Dakota. Dealers along the line of the North Pacific Road, up and down the Missouri River and throughout the entire Northwest, may soon buy their jugs, jars, earthen mugs and stoneware in Bismarck, thus saving hundreds of miles of freightage and long delays.

Happiness is not confined to any sphere of life,

NOTICE.

NEW YORK, December, 1883.

To the Trade :

GENTLEMEN : About five years ago we laid our claims before you as manufacturers of *Pads* and *Tablets*. Our facilities at first were small, and our lines few ; but as the demand grew, we increased our machinery and extended our lines, until we now claim to be the largest house of this *specialty* in the country, producing the enormous number of 6,000,000 to 8,000,000 Pads and Tablets annually.

About a year ago, we introduced our "*Perfect Pencil Tablet*," which has met with unprecedented success, the sale already reaching nearly 2,000,000, and rapidly increasing.

With the coming New Year we shall illustrate many of our goods with entirely new designs, printed and lithographed, thus making them, we believe, the handsomest and most saleable line of Tablets in the market.

Our large experience and superior facilities enable us to handle large contracts with despatch, guaranteeing satisfaction for neatness and cheapness.

We are prepared to furnish *Pads*, *Tablets* and *Blotter Tablets*, in all grades of paper, from cheap News to the finest quality of *Tub-Sized*, *Loft Dried*, White, Cream Linen and Quadrille papers.

Thanking you for the liberal support in the past, and soliciting a continuance of your trade for the future, we are,

Very truly,

ACME STATIONERY & PAPER CO.,

THE RAISBECK ELECTROTYPE CO.,
Electrotypers & Stereotypers.

No. 68 Beekman Street, New York.

ELECTROTYPES MOUNTED ON WOOD OR METAL.

THE PARSONS PAPER COMPANY,

— HOLYOKE, MASS., —

In addition to their already extensive establishments at Holyoke (which rank among the largest mills in this country), have recently built a separate mill, specially constructed and equipped for the production of the Best Grades of Linen Papers, and are now manufacturing all the various sizes and weights of BOND, PARCHMENT, BANK-NOTE, AND LEDGER PAPERS. They have already demonstrated their ability to produce of these papers a quality EQUAL TO THE BEST ESTABLISHED BRANDS IN THE MARKET.

Having great strength of fibre (an essential requisite in all Legal, Government and Commercial Papers), they are recommended for use in Bonds, Deeds, Certificates, County and State Records, etc. They are thoroughly sized to stand writing upon with fluid inks, and will permit of repeated erasures and re-writing thereon, when required. Great care is exercised to produce uniformity of color, strength and finish, and to do this, they have the latest improved machinery, specially adapted to the manufacture of Linen Papers.

They would call the attention of the Trade to the following brands, which are their trade-marks, viz.: In all Bond, Bank Folio, and Parchment appears the water-mark

"PARSONS PAPER COMPANY, HOLYOKE, MASS."

The Ledger Papers, of which they manufacture two Brands, are water-marked

"PARSONS LINEN LEDGER."

"SCOTCH LINEN LEDGER."

It is the intention of the Company to maintain the quality of these brands equal to any in the market.

E. P. DONNELL & CO., Chicago, Ill.,

Mfrs. of Bookbinders' Machinery and Tools.

PATENTED.

The Peerless Rotary Perforator and its advantages:

FIRST.—It handles huckled paper as well as flat, and runs the work through straight.

SECOND.—It has the best system for rapid and perfect feed.

THIRD.—It has the best system for gauges, and can be more quickly adjusted.

FOURTH.—The cutters and dies employed are also of the best Crescent Steel—tempered by a secret process known only to the inventor, which renders them more enduring and better capable of retaining their cutting edge.

FIFTH.—The paper is cut by a sharp, thin edge, requiring less room for perforations, thus obviating the necessity of handling the material perforated a second time, in order to remove the "waste" before binding, thus saving at least fifty per cent. in the expense.

SIXTH.—There is little or no "burr" from the cutter, and the catch or "lay-boy" is so arranged as to place the paper in regular packages ready for the binder. When not in use it can be put out of the way instantly.

SEVENTH.—All parts of the machine can be duplicated, to order, and can be sent by mail or express to any part of the country.

EIGHTH.—Each machine has a scoring cutter attached.

NINTH.—The "cams" can be so adjusted in a moment as to perforate a sheet CONTINUOUSLY or in alternate spaces, as may be desired. The machine, while a marvel of mechanical invention, is a model of simplicity.

WORCESTER, MASS., U.S.A.

Trade Gossip.

All new goods and designs which are not, strictly speaking, "Novelties" will be noticed under this head. The trade are requested to forward descriptions with samples in order to secure proper notice.

Jesse E. Dale, stationer, Du Bois, Pa., has been burnt out.

C. H. Pierce & Co., stationers' agency, La Fayette, Ind., have dissolved partnership.

James H. Hughes, dealer in bazaar patterns, Toronto, Ont., has been partly burnt out.

A fire at Chicago on Sunday afternoon in the store of H. M. Rosenblatt & Co., dealers in fancy stationery, caused a loss of \$15,000; insurance, \$7,000.

The *Bookseller*, London, sends a Christmas number which is a volume in itself, handsomely illustrated and printed. In point of press-work, however, it is behind its American contemporaries.

H. N. Hubbard will on January 1 issue a new price list of copying presses, and requests all buyers to send for it before placing orders elsewhere. He has recently added several new styles to his catalogue.

The assets of the Rock River Paper Company, Marshall, Mich., and Beloit, Wis., consisting principally of water-power and real estate, amounts to \$400,000, while the liabilities foot up \$550,000. The company hopes to pay dollar for dollar in time.

The plea of the New York *Graphic* Newspaper Company was lodged in court at Montreal on Thursday last in answer to the winding up order. It denies all the allegations made in the petition. The directors assert that the proceedings are the result of a conspiracy to wreck the company.

The Holyoke Envelope Company is at present working 250 hands in its factory about equally divided between the envelope and papeterie departments. Orders on the company's spring line, already received, will keep the factory hard at work for six weeks, and the company is daily receiving new orders which may compel it to increase its working force. As at present constituted, the factory can, "on a pinch," give work to 250 girls.

The National Publishing Company contemplates many valuable improvements for the year 1884, and assures the trade that its family bibles will be placed beyond competition. The immense sale during the first year of the existence of its trade line of quarto bibles satisfies it that its efforts have been appreciated, and nothing will be spared in the future to maintain their high standard, and to keep the best-selling and most attractive line of family bibles published.

The January number of the *Phrenological Journal* is unusually interesting. It contains portraits of Lord Coleridge, Chief Justice of England; Henry Irving, the English actor; Matthew Arnold and others, with accompanying character delineations and sketches. The article on "Eloquence," which is illustrated by portraits of Henry Ward Beecher and Daniel Webster, is full of interest from a phrenological point of view, and shows very clearly and forcibly the mental and physical qualities necessary to successful oratory. Other articles on various topics complete the budget of interesting and instructive reading matter.

The Palmer Art Company, 36 Bond street, proposes to offer to ladies of taste a profitable opportunity for the display of their ingenuity in devising new designs for fancy articles suitable for the Easter trade of art and stationery stores and the confectioner, such as novelties in bonbonnières, decorated eggs and other articles appropriate to the Easter season. The conditions of the submission of designs are as follows: First—The designs must be original, and should be executed as far as possible in the material intended for the finished article. Second—The designs must be forwarded at the designer's own risk and expense to the care of L. Prang & Co., 38 Bond street, New York, who have consented to take charge of this matter, and who will become responsible for the fairest and most liberal dealing with the designers. Third—Name and address of designer and a statement of price must accompany the model, such price to be for the design and model in full for all copyright. Fourth—A decision will be given in one week from receipt of design. Fifth—If accepted, the full amount demanded will be paid within the time specified. Sixth—If rejected, the design will be returned to any address given.

F. G. Hancock, manufacturer of blank-books and wholesale paper dealer, &c., Atlanta, Ga., proposes in the future to devote more attention to his manufacturing interests and paper business, having leased the front portion of his large and elegant storeroom, at the corner of Broad and Alabama streets, to John R. Wilkinson, who has also bought the stock of stationery, fancy goods, &c., of Mr. Hancock. The latter will continue the sale as heretofore of office supplies for merchants, banks, railroads, insurance companies, &c., in connection with his printing and blank-book manufacturing. He will also carry a larger and more complete stock of paper than before. Mr. Hancock still occupies three-fourths of the large building built expressly for him three years ago. His new salesroom will be very handsome and attractive, and will have a new steam elevator running through four floors. By concentrating his business in this way he hopes to materially benefit his trade.

The office of J. S. Nugent & Co., dealers in printed wrapping paper, &c., 538 Pearl street, was the scene of a very pleasant affair on Saturday evening. On that occasion each of the one hundred employees of the firm, on being handed his or her week's salary, also received a present proportionate in value to the length of time spent in the employ of the firm and efficiency of service. The presents ranged from a ladies' satchel to an imported French china set handsomely decorated. The presentation was a complete surprise to the recipients, who were, as a matter of course, highly pleased. In addition to a present, a number of the firm's employees received an advance in salary, and all were allowed Monday as well as Tuesday for a holiday. The firm speaks very highly of the faithfulness and efficiency of its employees, and took this method of showing its appreciation.

The clerks in the house of J. H. Bufford's Sons gave Frank G. Bufford, the manager of the New York house, a pleasant surprise on Christmas Eve, when they presented him with an elegant portrait of his son, F. Gale Bufford, who died about a year ago.

The works of the Standard Pulp Company, Springfield, Mass., were damaged by fire on Saturday morning. The loss will be quite large.

John Foley reports a brisk trade in his stylographic pen, which, in spite of numerous competitors, has steadily grown in popular favor.

C. E. Southard, printer, Chicago, Ill., has assigned to J. E. Marston.

A. B. Briggs, dealer in paper boxes, Middletown, N. Y., has made an assignment.

The estate of A. Townsend, publisher of the *Sentinel*, Red Bluff, Cal., has sold out.

George L. Church has bought the *News*, published by W. B. Whitney, Malden, Mass.

G. Lesser, dealer in paper-stock, Augusta, Ga., has been burned out. Insured for \$6,000.

An attachment has been issued against C. Molitor, paper-stock dealer, Oakland, Cal.

Zottman Brothers, printers, Cleveland, Ohio, have sold out to the Whiting Printing Company.

An attachment has been issued against the Leonard Scott Publishing Company, New York city.

J. M. Spore, bookseller and stationer, Rockford, Mich., has been burned out. Loss, \$1,100; insured for \$800.

A. A. Richards, publisher of the *Sumner County Press*, Wellington, Kan., has been sold out under an attachment.

R. H. Howell & Co., stationers and dealers in blank-books, Nashville, Tenn., have been damaged by fire. Fully insured.

The annual calendar of Chas. Lorilleux & Co., manufacturers of printing inks, Paris, has been received. *Mille remerciements!*

William Eckhardt & Co., manufacturers of mirrors, &c., Baltimore, Md., have dissolved partnership. William Eckhardt continues the business.

A dissolution has taken place in the firm of Vehon & Co., comprising the New York Sample Card Company, New York city. The business is continued by Virginia Vehon.

The office, stock and fixtures of the *Passaic Daily Times*, Passaic, N. J., has been placed in the hands of a receiver by Judge Dixon, at the suit of James Conner's Sons, the New York type-founders.

The firm of C. S. McKim & Co., job printers and manufacturers of letter books, &c., Cleveland, Ohio, has dissolved. C. S. McKim will continue the manufacture of letter books, &c., and William M. Bayne will continue the job printing and blank-book manufacturing business.

J. A. Austin, who has been identified with the Acme Stationery and Paper Company for many years, has recently established himself in business at 296 Pearl street, under the style of the Acme Composition Company, for the manufacture for the trade of an adhesive composition used by makers of writing-pads, blank-books, &c.

Judge Mitchell, in Court No. 2, Philadelphia, Pa., on the complaint of Robert S. Davis, proprietor of the *Evening Call*, has issued a preliminary injunction against the *Evening News* Company and Edward H. Nevin, Jr., and E. Cooper Shapley, who are respectively president and directors of the company, defendant. The complainant holds a protested note of the *Evening News* Company for \$2,710, and alleging that the company is insolvent, asks that a receiver may be appointed and a master be directed to state an account of the affairs of the company. Averring that the two named defendants possess demand notes of indebtedness due them by the company, and fearing that these will be pressed in a manner to jeopardize the interests of other creditors, the plaintiff asked for a preliminary injunction until the case be heard. In the bill of complaint the plaintiff sets down the

assets of the company at \$10,750 and \$35,000 liabilities.

The Montreal Printing Company, Montreal, Que., has been burned out. Insured.

Wm. H. Boger, printer, Reading, Pa., is advertised to be sold out by the sheriff.

The stock of Patrick J. Sullivan, paper-stock dealer, Holyoke, Mass., was damaged \$100 by fire on Saturday last.

O'Neil Brothers & Co., paper manufacturers, Soguel, Cal., have sustained a loss of about \$1,000 by fire. Not insured.

Randall & Edsell, paper manufacturers, Delaware, Ohio, have dissolved partnership. Glass, Edsell & Co. have succeeded the late firm.

Frank Roehr, printer, Chicago, Ill., has departed. Among his creditors are Barnhardt Brothers, \$500; F. P. Elliott & Co., \$500; Bradner Smith & Co., \$1,000.

P. Hirschfeld, bookseller and stationer, Los Angeles, Cal., has admitted H. Barting to partnership. The style of the firm has been changed to Phil. Hirschfeld & Co.

James W. Vaters & Co., proprietors fancy leather works, Philadelphia, Pa., are reported closed by the sheriff on execution for \$6,500. Liabilities, \$12,000; nominal assets, \$11,000.

Wilson Brothers & Co. have sold this season about four times more sleighs than in any previous season for many years. Notwithstanding the unexpected fall of snow their facilities were such as to enable them to fill the heaviest orders at once.

A sheriff's posse has charge of the McDowell Paper Mill, Manayunk, Pa. The mill was run until Saturday, the 22d inst., when an inventory of stock was taken. It is stated that there will be no permanent stoppage of the mill, but operations will be resumed.

The line of calendars offered to the trade by M. J. Anderson is very large and varied. Some of the latest styles are a double folding vest-pocket calendar, a folding pocket calendar of Gothic design and printed in gold and colors, a book calendar, and several very handsome office calendars.

The Acme Stationery and Paper Company is getting up a handsome new lithograph cover for the American blotter tablet, manufactured by this firm. The cover will consist of bristol board of various delicate tints ornamented with a showy landscape view. W. H. Sears, the representative of the firm, will start on an extended trip in the West in a few days.

The *Pacific Coast* is a new monthly periodical devoted to the resources and industries of the section after which it is named. The first number contains an illustrated article on "Prehistoric Arizona, or Relics of an Unknown Race," and another on "Alaska, Its Resources and Characteristics," besides numerous other articles of interest, not only from a trade point of view, but to the general reader. Its publishers are W. B. Bancroft & Co., San Francisco, Cal.

A. Weidmann, in addition to his extensive line of toys, fancy goods, &c., has the most extensive assortment of masks, wigs, beards and mustaches, as well as gold and silver trimmings used in decorating ball and masquerade dresses, in the country. Among his masks are new and improved patterns of comical characters, such as clowns, Chinese, devils, hermits, together with masks representing Shakespearian characters, animal faces, &c. He has also a full assortment of costumers' materials, such as clown sticks, canteens, imitation jewelry, crowns, diadems, necklaces; costume plates printed in colors, showing Parisian, stage and ball masque costumes, cotton, worsted and silk tights.

The December number of the *American Journalist* fully sustains the high standard of merit which characterized the first issue of this publication a few months ago. The leading article is entitled "Kansas Journalism; or, The Men of '57," which embraces an interesting account of the struggles of the press in Kansas before the war. The "Law of Libel" is an article which shows up in a forcible manner the absurd technicalities which the court reporter has to fight against in order to escape charges of libel. Other articles, together with spicy newspaper gossip, make up a very readable number.

The claims of the various creditors of Culver, Page, Hoyne & Co., Chicago, Ill., have been sent on to Chicago for settlement, all of the creditors, excepting a few who brought suits to recover their claims, having accepted twelve and a half cents on the dollar.

The Hanover Fire Insurance Company is presenting its New Year compliments on a calendar brilliant in coloring and attractive in design.

F. Kressman has been admitted into partnership with Max Stern, stationer, &c., Chicago, Ill. The style of the firm is Max Stern & Co.

L. Prang & Co. report a heavy trade in New Year cards, which this firm has been favored with during the past few days.

Curry, Clay & Co., stationers, &c., Baltimore, Md., have dissolved partnership. Oliver W. Clay & Co. continue the business.

A dissolution has taken place in the firm of Garn & Boehl, publishers, Grand Island, Neb. A. Garn continues the business.

E. S. Snowden & Co., stationers, &c., Lake City, Fla., have removed to Palatka to sell out.

Davison & Malone, printers, Metropolis City, Ill., have sold out.

An assignment has been made by Philip Frey, dealer in toys, &c., Brooklyn, N. Y.

L. W. Robinson, 'publisher, Coal Creek, Col., has been succeeded by Ferguson & Gring.

H. Rosenblat & Co., stationers, Chicago, Ill., have lost \$15,000 by fire; insured for \$9,000.

F. R. Fithran has bought out A. M. Heston, publisher of the *Chronicle*, Bridgeton, N. J.

Mrs. D. L. Drake, newsdealer, stationer, &c., Irwin, Col., has closed out her business.

George Keller, dealer in picture frames, Chicago, Ill., has been burned out. Loss, \$5,000; insured.

Conrad Prag, of the firm of Walzman & Prag, manufacturers of paper boxes, San Francisco, Cal., is dead.

Metzger & Co., paper manufacturers, Beaver Falls, Pa., have sold out to the Beaver Falls Paper Company.

S. T. Wray & Co., manufacturers of paper emery-wheels, Buffalo, N. Y., will remove to Auburn on January 1.

R. H. & N. L. Jones, publishers, Lordsburg, N. M., have dissolved partnership. R. H. Jones continues the business.

The Montreal Manufacturing Company, cardboard and paper manufacturer, Montreal, Que., has gone into liquidation.

Nawrath & Cherry, dealers in twines, &c., New York city, have dissolved partnership. C. W. Nawrath & Co. continue the business.

The line of New Year cards of Phil Hake has been gotten up with a rare degree of taste. It embraces a great variety of popular styles.

W. T. Oden, dealer in Japanese goods, Fresno, Cal., has admitted G. W. Strine to partnership, and the firm will do business under the style of Strine & Oden.

J. H. Bufford's Sons have introduced ten new numbers of New Year cards. These cards are all printed in one to five colors on the very finest quality of stock, and have both plain and beveled edges, and the line throughout is very attractive. The firm will have ready in a short time an elegant line of Easter cards in original and imported goods. Anything bearing the stamp of J. H. Bufford's Sons is a guaranty of quality and general elegance of make up.

INSOLVENCY LAWS.

It is the all but unanimous sentiment of the business public that the necessity for a National law for the equitable settlement of bankrupt estates is imperative, but there is an honest difference of opinion as to the technicalities of such an instrument. Since the abrogation of the old law, in 1878, the creditor has been at the mercy of the State insolvency laws for the collection of debts, no two of which are alike, and none of which answer the purpose. The creditor in one State, with scores, or it may be hundreds, of debtors in other States, is subjected to the obligations and deprivations of distinct, antagonistic laws, so that he is ever taking a risk which, by legislation, may be varied without the slightest consideration for his rights. As these laws stand at present, it is the rogues, great and small, who are peculiarly benefited. It being unanimously agreed that there should be laws for the collection of debts, it is an anomaly that the principle which is applied to States should meet with any opposition as regards the nation. But there are some grounds for the hope that Congress will, at the present session, deal candidly and earnestly with this question. There is to be a concerted movement in behalf of a rational and right law; the failures with large, not to say inequitable preferences, which have taken place of late, have aroused the attention of the mercantile community.

What is required is a full surrender of all the property of an insolvent debtor, or so much of it as by law he may be required to make; this to secure him prompt and instant release of all his obligations, placing his property at once into the hands of his creditors and giving them absolute control of the same. No fees should be allowed, except a small one to the assignee and perhaps a commission to a trustee, to be agreed upon in advance between him and the creditors. This plan of determining the ownership of the bankrupt's effects is based upon the idea that they belong to him or his creditors, which is at variance with the opinion of the legal profession, viz., that they belong to the lawyers; furthermore, as the assistance of any of these gentlemen was not required when the goods were sold to the bankrupt, it ought not to require the aid of the lawyers in selling them back again. Reduced to its simple form, all that is required in a case of bankruptcy is a simple reselling of property. In the desire of Congress to avoid political errors, it is to be hoped that it will give consideration to a subject which is of importance to all, and to many of the greatest and gravest consequence.—*Shipping List.*

A white fire which can be used as an artificial light in photography can be composed of chlorate of potash eight parts, sulphide of antimony four parts, sulphur two parts, magnesia in fine filings or powder two parts. The ingredients must be powdered separately and then mixed intimately with a bone spatula.

WANTED.

By a Wholesale Stationery House, a Traveling Man acquainted with New England trade.

Address, with real name, Box 3689, Boston, Mass.

TRAVELING SALESMAN.

A graduate of a New England College, having an experience of ten years of traveling in the Wholesale Blank-Book and Stationery, desires to make an arrangement to travel for a Manufacturing or Publishing House. Has traveled West, and is well acquainted with the trade in New England and New York State. Address TRAVELING SALESMAN, care of Benjamin Moody, No. 43 Chatham Street, Boston, Mass.

THE STATIONER.

DEVOTED TO THE INTERESTS OF THE

Stationery and Fancy Goods Trades.

WEEKLY--\$2.00 PER ANNUM.

Single Copies - - - 10 Cents.

NEW YORK, THURSDAY, DECEMBER 27, 1883.

Advertisements cannot be received for insertion in the current week later than 12 m. on Wednesday. The charge for advertising is 25 cents a line, each insertion. Special terms for standing and displayed advertisements to be had on application.

This journal aims to be a medium of information for and a representative of the interests of every one connected with the stationery and fancy goods trades. It contains a full and trustworthy survey of the market for stationery in this country, in all cases giving the actual prices at which goods can be bought of importers and jobbers in this city, together with a detailed account of novelties in the trade, patents relating to stationery, and current items of interest. A review of foreign markets and accounts of movements abroad will also be furnished, and no pains will be spared to make THE STATIONER a thorough and complete exponent of the trade.

Subscription and postage for Great Britain, per annum..... 12s.

Any information our readers may wish to obtain shall be cheerfully given, and prompt replies will be made to all inquiries addressed to us on any subjects of interest to the trade.

Communications on all trade matters are earnestly solicited. Address

HOWARD LOCKWOOD, Pres. and Treas.
American Stationer Association,
74 DUANE STREET, NEW YORK.

Subscribers to THE STATIONER can be supplied with the best cloth binder in the market. Deliverable at the publication office. Price, fifty cents.

Readers of this paper who avail themselves of the information obtained from its columns, by advertisement or otherwise, are requested to notify their correspondents of the source of their information.

ANOTHER year is added to the cycle of ages, and the page of history is turned to give place to the records of the year to come. We greet our readers with kindly wishes, and hope that 1884 will be cheery with promise and happy with the fullness of joy.

THE new year is generally loaded with fair promises of things to be done or to be left undone. We do not expect that in this regard 1884 will be less favored than its predecessors, but we can and do hope that it will be more blest in the performance. Much has been said and more can be suggested about commercial ethics, but if we can only carry out one-half of the professions which seem to obtain common consent, if not common action, we shall do well. There are duties which the mercantile community ought to perform, and reforms in trade which ought to be inaugurated. Shall it be said at the close of another twelvemonth that we have left undone the things that ought to be done and have done those things that ought not to be done? Let us strive to improve the record, and to make 1884 remarkable for its history of reforms begun and carried out.

OUR trade with Brazil is increasing steadily, but not anything like what it should increase, and what it would were our exporters to put forth their best exertions to that end. It seems to us that our people do not fully appreciate the importance of securing their full share of Brazilian trade, else we should be able to record more advancement. Our Consul at Para, Mr. Prinolo, who has given the question much study, after reciting the growth, in population and trade, of that city, says that it would seem remarkable if our manufacturers shall not be able largely to increase their trade with Para, which means also the whole Amazon Valley lying back of it. The exports from the United States to Para at the present time comprise very little other than groceries, provisions and oils. This trade is increasing (because such articles cannot be got elsewhere), but no other. These people in some respects resemble those of many other foreign nations; it is difficult to introduce among them anything except that to which they and their ancestors have become accustomed. If our manufacturers desire to increase their exports of general manufactures to that port, they must first send good business men to familiarize themselves with the language, market, styles, general business methods, &c., of the place; and, when such knowledge is acquired, secure advices and samples, and then manufacture to suit. Let two, three, or more of our manufacturers of different kinds of fancy goods, &c., conjointly send to Para a capable person (an American), mutually bearing the expenses, for the above-named purpose as an experiment. The result would, in time, prove satisfactory, but if not, the loss to each could not be great. Failing some such method, the Consul considers it unreasonable in our manufacturers

of general merchandise to expect much of a market in that part of the world. It must be borne in mind that there is great competition in Para among the English, French, German, and Portuguese merchants, and of course neither cares to push such manufactures of either of the other countries as compete with those of his own. There are two English lines and one French line of steamers plying from European ports to Para, making about seven trips each month. A German line is about to be established.

ROUNABOUTS.

BY THE TRADE LOUNGER.

One day out of the week is confusing. More than one person has remarked that it seemed as if Sundays came pretty close together. So they do, for the man who doesn't want to let up for a day. But really Tuesday was rather a quiet day, and folks mostly kept jolly within doors—leastwise those who had anything to make 'em jolly.

* * * *

There was the usual amount of getting to bed late on Monday night and of getting up early on Tuesday morning. Those who went to bed early on Monday night got up early the next day, and those who went to bed early on Tuesday morning didn't want to get up early, but had to. Perhaps there is something confusing about this. I don't know but there is. I feel somewhat confused myself, and have seen some confusion. But what was I talking about? Something early? Oh, yes; very foolish to get up so early. I don't like the matutinal and sinuous worm.

* * * *

Christmas has gone, and the New Year approaches. Let us not linger over the unpleasant memories of the past, but look hopefully to the future. May the days to come be bright and happy to THE STATIONER and all of its friends and patrons—yes, to all humanity.

* * * *

The United States Treasury Department has been making a few more decisions of some interest to the trade. For instance, it rules that "pressed flowers," heretofore admitted as manufactures of paper dutiable at 15 per cent. ad valorem, must be assessed at 50 per cent., the flowers being made from a foundation of paper covered with cotton, and then with silk and embossed, silk being the component material of chief value.

* * * *

Plated spangles are dutiable at 35 per cent. They have been assessed at 45 per cent., and it has been claimed that 25 was the proper rate. What does Weidman say about this?

* * * *

Fancy boxes, whose component material of chief value is something else than paper, are to be assessed separately from their contents. What constitutes a fancy box is to be left to the wise discretion of the customs officers.

* * * *

Long black pins with imitation jet heads have to be known as manufactures of iron or steel, paying the same duty as the iron or steel wire of which they are composed.

* * * *

Leather-covered photograph albums are chargeable with duty at 30 per cent. unless the metal clasps form the component material of chief value. This is something to consider in

albums highly ornamented with metal. Importers may do better to import the metal ornaments separate and put them on after duty is paid.

"I consider THE STATIONER of the greatest value to the trade," said the head of a large manufacturing house to me recently. "The answers to correspondents are more than worth the price of subscription. The points I get from it regarding trade I find very reliable." The same opinion was expressed by another large dealer. Such remarks are very good. I only hope that they are followed up by proper methods of patronage.

A lady of my acquaintance bought two turkeys for her Christmas dinner. Her husband, as a pleasant surprise, brought home another. Had it not been for a kind-hearted grocer the woman would have been left with two turkeys on her hands, or have had to give a turkey dinner party. This is what the French would style an embarrassment of riches.

"The holiday season has been exceptionally good," said a dealer a day or two ago. "People seemed to have plenty of money and generally took a better grade of goods. The question was not how cheap and showy goods have you, but what is the best you have." This is one of the features of the day. The popular taste has undergone an amazing amount of education. Even the small boy repudiates a poor chromo.

Gerald Massey, the English poet, litterateur and lecturer, now in this country, has sued the New York Times for libel, laying damages at \$5,000. The nature of the libel he claims to be this: He wrote, at great pains and labor, a lecture entitled "Man in Search of His Soul for Fifty Thousand Years and How He Found It." He delivered that lecture here, and thereupon the Times published an editorial poking fun at Mr. Massey. It ended by saying: "Mr. Massey should investigate this great question, and Colney Hutch would afford him the quiet necessary for the purpose." Mr. Massey, in his complaint, explains that "Colney Hatch" is the location of a large asylum for the insane in England. He claims that the editorial created among the public the belief that he was insane and should be confined in an asylum for the insane. The misspelling of Hutch for Hatch, he says, was either by accident or ignorance. He says that from this editorial he has suffered loss in character as a man, author, writer and lecturer, and his purposes as a lecturer have been thereby defeated, so he wants \$5,000 damages. Where did he hatch up that title for his lecture?

Market Review.

OFFICE OF THE AMERICAN STATIONER,
WEDNESDAY, December 26, 1883.

THE MONEY MARKET.—Dullness has prevailed in financial circles, and the money market closed without any feature of note except ease. Commercial paper is dull, only best names being readily negotiable. Call loans were $1\frac{1}{2}$ to $2\frac{1}{2}$ per cent. on stock collateral and 1 to $1\frac{1}{4}$ per cent. on government bonds. Speculation in stocks was dull and weak, and in the absence of news of importance the bears used every effort to depress prices, repeated drives being made against the Vanderbilt and Gould shares. Government bonds were stronger and higher for the 4s. The 4½s and 3s were unchanged. Railroad bonds were weak and lower. Foreign exchange was weak, owing to the light demand.

THE PAPER MARKET.—Business in the paper trade has partaken very much of the usual quietude incident to the close of the year, consumers generally buying no more than they require for immediate use. It has been seldom that a year has closed with such favorable prospects under like conditions as the present is closing. Although prices rule very low on most every grade, the consumption of paper is large, and serves to sustain the market against any decline. Fine writings hold their own very well. The increase of 25 per cent. in the amount of letter writing as estimated by the Post-Office Department through the reduction in postage, is a sustaining feature in the prices of this grade. Print papers are also steady and the demand is sufficient to prevent any weakening in price. Manillas are also steady. Straw wrappings are in very large supply and prices are weak, but dealers look for an improvement very soon.

THE STATIONERY MARKET.—With the exception of a small local trade in holiday goods, business is at a standstill. Dealers, however, are very busy—not in attending to orders, but in making out their balance sheets and preparing for the trade of the new year. Orders for staple goods have very generally ceased, and it is hard to predict at this early period with what promise the new year's business will open. The trade in gold pens, pencils, stylographic pens, &c., is quite fair on account of the local demand for these goods as holiday gifts. Though the bulk of business in New Year cards was done several weeks ago, there has been a brisk demand for these goods within the past few days, occasioned possibly by the recent appearance of several new designs in the market. There is a little doing in blank-books, but orders are very small and buyers are very cautious.

OUR LONDON LETTER.

[FROM OUR REGULAR CORRESPONDENT.]

5 LUDGATE CIRCUS BUILDINGS,
LONDON, E. C., Dec. 15, 1883.

From Brighton to Birmingham, from the haunt of fashion to the home of labor, from the business of excitement to the excitement of business, is somewhat of a change, a greater one, indeed, than is to be measured by the 150 miles that intervene between them. Distance is nothing nowadays, and greater contrasts can be found between the east and the west ends of London than are presented by these two towns—a fact that is being brought home to us by the newspapers, which are now echoing the "bitter cry of outcast London," and treating us to vivid descriptions of the "horrible homes" of the poor. The contrast of Brighton and Birmingham is of a different character; it is the contrast presented by wealth luxuriously at ease, as represented by the "queen of the south coast," and wealth at its business—that of making more wealth—personified by the "metropolis of the Midlands."

Although, however, Birmingham may be regarded as the very antithesis of Brighton in most respects, one or two points of resemblance it has to the aristocratic southern resort. Its growth to its present size and importance has been almost simultaneous with the growth and use of Brighton, and is the result of the same causes that have largely conducted to the prosperity of that town, the marvelous expansion of the manufactures and commerce of this country, which has made such places as Birmingham on the one hand, and Brighton on the other, the monuments of accumulated wealth. Another feature common to both towns is, that having reached a certain stage of development, it would seem that they have, for the present at least, come to a comparative standstill. That is to say, that although there are all the evidences of activity and enterprise in both places—the building of handsome houses at Brighton and of fine workshops and factories at Birmingham, and, although there may be no absolute falling off in the output of the latter place, yet the fact remains, in spite of what the correspondents of some English journals may say to the contrary, that on all hands grumblings are heard as to the glutted markets, which is only another way of saying that supply is exceeding demand, or, in other words, that the general condition of the country is not prosperous, for nothing is more certain than that a prosperous people always buy freely.

Of course, everyone knows that Birmingham does an immense export trade, and is therefore in a great degree independent of the home buyers, and can afford better than most towns to "wait for a rise." It is therefore obvious that there, if anywhere in the country, buoyancy and briskness of trade may be fairly expected, and I certainly hoped to find a decided contrast presented to the depression which prevails in London. I am bound to say, however, that I found no striking difference—sales sluggish, prices low, is the cry here as elsewhere, fierce competition, artificial discounts, interminable credits, combined with doubtful prospects of ultimate payment, the same complaints that have grown so familiar during the last three or four years. Travelers feverishly anxious to book orders on any terms, undercutting prevailing in all directions. As regards discounts, I was told of an "agent" who had offered Christmas cards at a discount of 50 per cent. and 50 per cent. and 15 per cent., that is to say, the

manufacturers' ordinary discount of 50 per cent., a special "clearing out" discount of 50 per cent., and 15 per cent. for cash. My informant, a thoroughly reliable one, said he could have had tons of cards on these terms.

Printers seem to keep going as well as any one, but only at ruinously low prices. One of the largest in the town told me that although, owing partly to official interest, he had had his machines fully occupied during the year, he felt sure that at stock taking time he should find that he had not cleared expenses. Lithographers in colors are perhaps a little better off, chiefly owing to the demand that has set in in recent years for calendars and litho-border work. There is some very good chromo work done in Birmingham now; indeed there is scarcely any art or industry that is not more or less represented in the town, and if it does not double its size and treble its wealth in the next forty years, as it has done in a like period in the past, it will not be for want of enterprise and adaptability. So much for the wholesale trades. As regards the retailers, much the same condition of things prevails. "What can a man do?" said a shopkeeper employing a lot of counter hands, some of whom looked far away more comfortably off than their employer. "What can one do when a good shilling's worth of stationery boxed in an ornamental papeterie can be got at a draper's or a tailor's (!) for sevenpence halfpenny, and copying-ink pencils are hawked about the streets at twopence each?" I could only tell the disconsolate tradesman that he was no worse off than his London contemporary, and that he had better sell ribbons and laces, and, if needs be, trousers and coats. This did not seem to please him, for he replied that he was a respectable tradesman, and not a cheap jack. So I left him like *Hamlet*, when he had had to "unpack his heart with words and fall a-cursing."

One thing must certainly be conceded in reference to Birmingham, and that is that it is never behind in its appreciation of a good idea where ever it may emanate from; and, as imitation is the sincerest form of flattery, Americans ought to fully appreciate the efforts which the Midland folks have always made to follow their example in the introduction of novel and pleasing contrivances. I saw plenty of American goods in Birmingham, and I saw plenty of Birmingham goods that were a very good imitation of American.

The near approach of the Christmas holidays has had the very desirable effect of waking things up to some extent in London. Of course the wholesale sales are quite over, so far as this year is concerned, and although bustle and hurry prevail in the warehouses, it is only in the perfunctory performance of getting out the goods for which sales were booked months ago, or in putting things right for the early spring trade. But in the retail trade there are all the signs of active, tangible business. There are many very fine shows of season's goods to be seen in the principal streets with admiring crowds outside, and, what is better, purchasers inside the shops. The sales of fancy goods have been rather larger than for several years past, but the familiar old cry of "low prices" continues, for which the manufacturer blames the middleman, the middleman the shopkeeper, and the shopkeeper the draper and the stores.

The markets are again swamped with Christmas cards, and as usual the best shows are in the drapers' windows. Nearly £1,000,000 is invested every year in these goods by the publishers of this

country, so that if things were "straight," there ought to be a rich harvest for stationers reaped from their sales, but as it is many shopkeepers say they are not worth handling. Of the small traders this is especially true; owing to the "sliding-scale" arrangement, big drapers and stores can get cards at 60 per cent. off, while the lesser man, with his £20 order, can only get 15 per cent. or 20 per cent. reduction. One feature of this process is especially inconsistent with fair play, and is causing a considerable outcry. It is this: A shopkeeper orders his stock of Christmas cards in the summer, on the strength of the traveler's assurance that it is to his interest to do so, as the best cards may be at a premium later on. When the autumn comes, the too credulous tradesman finds that on the very cards that he got a 15 per cent. reduction, shrewd men who have waited are getting 60 per cent. off. All this shows the rotten condition—one can use no milder term—of the trade in these articles.

Speaking of cards, a novelty has been introduced by Joseph Mansell, of Red Lion Square, London, in the shape of sea-weed inlaid in a gelatinous substance, a sheet of which in which the specimen of weed is, so to speak, embalmed, being inclosed in a folding card with verse and Christmas or birthday greeting on the cover. Sea-weed has been used before for cards, but not, I believe, in this way. Tasia cards is the name given to these productions.

Another new thing in these goods is the Pearl inlaid cards introduced by M. Samuel & Co., of 31 Houndsditch, London. They consist of two gilt beveled-edge cards in the upper one of which a design is executed in inlaid pearl of various shades. A remarkably pretty effect is thus produced, and from the way in which they have already been received by the trade, there is every reason to anticipate considerable popularity for them.

Some capital new reliefs have been recently published by Bim Brothers, of Milton street, London. They are of remarkably good quality and low price. Among others, may be noted a big man-of-war, with steam up and sails set, surrounded by smaller vessels and a turret ship in the distance, some large baskets of fruit, and a hunting scene, and some four heads of horses. These retail at one shilling.

Marion & Co., of Soho square, London, have a splendid stock of photographs in various sizes, both plain and colored. An especially noticeable series is that of London views, taken by the instantaneous process. The fidelity with which the moving life of the great city is caught and fixed in these views is remarkable; in this line they are unsurpassed. The same firm has a splendid stock of albums, both photo and scrap, all of good quality for the money. Their olive-wood goods are another strong line.

John Walker & Co., of Farringdon street, have a novel line of Murcian cork stationery, so called from the hand-cut cork ornaments on the top of the sheets of paper and the flaps of the envelopes. The designs include the rose, thistle, shanrock, ivy leaf and village church; twelve sheets of note and twelve envelopes in a box sell at one shilling. The same firm has some of the cheapest papeteries I have yet seen.

The Foreign Art Pottery Company, of Hatton Wall, London, has some new ware which is being much admired. It is called Frankonia and is in three different styles—royal blue-and-gold, art green-and-gold, and rainbow colors. The ware is shown in flower-holders, spills, vases, jardinières, jugs and other articles, and is very pretty and moderate in price. A Greek ware, which consists of a bronze decorative sub-

ject on a black ground, with a raised figure in white, is quite new and very effective. The company has numerous other novelties, and their catalogue would be found useful to those who go in for this branch of fancy goods. They use an increasing number here.

A splendid show of pens and pencils in gold, silver and gold-plated goods is shown by W. S. Hicks, of Snow Hill, London, and Maiden lane, New York. He is having a fair innings here with his rubber side pencil with gold-plated mounts. It is a handsome article, and capital value for the money. His charm pencils, in the form of peg-tops, cannons, cartridges, beer bottles, &c., are also going well. They are capital novelties, especially some of the latest editions, notably a dog's head in oxidized silver, with gold-plated mounts and shining red eyes. The action of these pencils is telescopic and remarkably perfect. Mr. Hicks has been awarded the medal at the Amsterdam Exhibition in both departments—pens and pencils—a circumstance which no one who sees the handsome selection of those articles in the show-case at his London office will be surprised at.

L. W. & Co. Brothers' new gum bottle is having a tremendous success here. The combination of bottle and brush is a happy thought and deserves every success. Persons who have had the article in use constantly since its introduction three months ago tell me it answers perfectly.

In conclusion, I must say one word in admiration of your holiday number. It is, in masher parlance, "A fair take down for a fellow."

Reception cards are square, with the name and address and the reception day and some times the hour engraved in the left hand corner as heretofore.

Artists of ability now bring out charming novelties in the guest cards used at dinner parties.

All kinds of invitations are engraved or written on clear white paper, except invitations to gold and silver weddings.

BLANK FOR CHECKS, ETC.

Heretofore it has been customary for a bank or banking-house that has a check on another bank to collect to send it for collection to a bank with which it is in communication, or in which it has a correspondent, and located in the place that is nearest the one in which the bank is located on which the check is drawn. If the bank in which the check is deposited for collection is in communication or corresponds with the bank on which the check is drawn, it sends the check direct to the same; but if it is not in communication or in correspondence with the same, it is forced to send the check to some other bank with which it is in communication, and which is also in communication with the bank on which the check is drawn. By this method of procedure it frequently happens that a check deposited for collection in a bank located only a short distance from the bank on which the check is drawn is obliged to travel a very great distance before it can be collected or paid.

An improved form of blank for checks and other negotiable papers consists in a check, draft, note, or other negotiable instrument having printed or otherwise produced thereon the names of the correspondents of the bank through which said check or other instrument is collectible.

On the back or face of the check or other negotiable instrument are printed or otherwise produced the names of the correspondents of the bank through which the check is collectible, so that if any other bank or banking-house receives the check for collection it is enabled to immediately ascertain the different banks that are in communication or correspondence with the bank on which the check is drawn, and of the number of different banks noted on the check, the bank can forward it to the one that will insure the most prompt collection of the check.

The names of the correspondents of the banks can be printed in pale ink on the face or the back of the check, or they can be printed on one end of the check. If desired, the words "collectible without charge from the following banks" can also be printed on the check-blank. The names can be printed, lithographed, stamped or otherwise produced in some suitable manner on the blank. In place of the names of banks, the names of banking-houses, commercial agencies, and other commercial establishments can be produced on the checks, and the blanks can be used for checks, drafts, notes, or other negotiable paper.

READ YOUR TRADE PAPER.

The best proof of value of trade papers may be found in the fact that all successful merchants, dealers and retailers acknowledge that they have derived great benefit from them and continue reading them, as long as they do not retire from active business. But there is on the other hand a class of dealers and retailers who declare that they have not the time to read trade papers, and if they had the leisure to read them, they would know beforehand what they contain.

To these the *Moniteur* replies that a business man, however little leisure he may think he has left to bestow on reading, ought to find time to inform himself about what in his trade concerns him most, and is to him as much a matter of dollars and cents as his current business. The trifling sum of the annual cost of subscription is made up in a hundred or a thousand fold by the valuable hints a trade paper may contain, not left unheeded by the intelligent reader.—*Le Moniteur du Commerce.*

CHECK REGISTERING AND PRINTING APPARATUS.

A check printing and registering apparatus has for its object the simultaneous printing or marking of two separate strips of paper within an inclosing case and the subsequent automatic delivery from the case of one of the strips, from which the printed section may be detached to be used as a check, while the duplicate strip is retained within the case to serve as a complete and accurate register of the precise number and denomination of each check issued. This object is accomplished by means of a hinged and pivoted crank lever or rotating arm arranged to vibrate upon the outside of the case over a fixed index-plate indicating the several numerals or other marks desired upon the checks, and which is coupled with an inner plate carrying type or marking devices corresponding to the marks, and with mechanism for feeding forward the strips of paper and forcing the same for impression against the types or marking devices by means of a movement of the outer lever at the instant it is placed over the desired mark upon the index-plate. The case is locked so that its key can be retained by the party entitled thereto.

A cutting device can be combined with the printing mechanism, so that the checks or tickets to be delivered from the machine shall be severed from the strip as they are issued, leaving the record-strip only in continuous form.

Two or more duplicate record-strips may be imprinted instead of one, as described, where such are needed, in connection with the issue of

the checks or tickets, and the position and relative arrangement of the several parts of the machine may be changed, so as to produce an issue of the checks from the top instead of the side.

I. B. & W.**—:ROUTE!:****THE GREAT THROUGH ROUTE**

Between the **EAST, WEST, NORTH and SOUTH.** This Great Through Route is now completed and in full operation, **RUNNING THROUGH PASSENGER TRAINS DAILY** as follows:

Three solid trains each way between Columbus Indianapolis and Peoria; two trains each way between Columbus, Indianapolis and Decatur; two trains each way between Sandusky, Indianapolis, Peoria and Decatur; two trains each way between Sandusky, Dayton and Cincinnati; three trains each way between Sandusky, Springfield and Columbus; four trains each way between Columbus, Springfield, Dayton and Cincinnati; two trains each way between Columbus, Springfield, Indianapolis and Chicago—with Sleeping and Reclining Chairs on Night Trains, and elegant Parlor and Modern Day Coaches on Day Trains.

Its track is laid with **HEAVY STEEL RAILS**, thoroughly ballasted, with easy grades and few curves.

Traversing as it does the heart of the three great States of Ohio, Indiana and Illinois, uniting in close business relationship the capital cities of the first and second, with the second city of the third, and passing through a large number of the most important cities and towns in each, and with all its central location makes it the **Shortest and Most Desirable Route** between the East and West.

THROUGH TICKETS AND BAGGAGE CHECKS to all principal points, **NORTH, SOUTH, EAST and WEST**, can be obtained at any ticket office of the I. B. & W. R'y; also via this Route at all railroad offices throughout the country. Rates always as low as the lowest.

Don't purchase tickets to any point without first consulting the Agents of the I. B. & W. R'y.

Particular advantages offered to Western Emigrants. **LAND and TOURIST TICKETS** to all points reached by any line.

A Revolution in Stylographic Pens. {
The Latest Improvement.

THE KERNER.**\$1.**

It is constructed on strictly scientific principles, and being devoid of the complications which exist in old styles is less liable to get out of order. It has no springs to be affected by the action of the ink. The needle is rigidly fixed to a flexible air tube extending entirely through the barrel, which when writing is constantly vibrating throughout the entire length of the barrel agitating the ink and causing a perfect flow to the point. It is unequalled by any writing instrument of the kind ever offered for public favor, and gives entire satisfaction to all who use them. It is constructed of the best material throughout, and the point is of platinum alloyed with iridium. Prices: No. 1, Plain, \$1; No. 2, Engraved, \$1.25; No. 3, Gold Mounted, \$1.50; No. 4, Entire Gold Cap, \$3; No. 5, Mottled Ruling Pen, \$1.50. Send for Circulars.

ADJUSTABLE BOOK-LOCK.

This invention relates to that class of locks adapted to be fastened to the free edges of the covers of books for the purpose of holding the books closed, to relieve the back from strain and keep the contents of the book from public perusal when desired.

The object is to provide a new and improved book-lock which can be adjusted according to the thickness of the book.

The invention consists in a lock-casing held adjustably between two longitudinally-slotted angle-pieces pivoted to a plate adapted to be fastened to a cover of the book, to permit swinging the lock-casing down when the book is to be opened.

The mechanism of the lock can be of any desired kind, as the same can be provided with a barrel, spindle or flat key, or with a spring catch or bolt.

With each recurring season that elegant annual, Vick's Floral Guide, presents new attractions. The issue for 1884 is an elegant book of 150 pages, with three colored plates of flowers and more than one thousand illustrations of the choicest flowers, plants and vegetables, with directions for growing. Parties sending for this publication can deduct its cost when ordering goods. It can be had of the well-known seedsman and florist, James Vick, Rochester, N. Y.

In exclusive stationery we have the paleographic, resembling old parchment. It bids fair to be a favorite among lovers of the antique.

Among favorite monogram decorations for note paper is a sunken square of a darker tint than the paper, with the monogram in a lighter shade raised upon it.

Fine Bronze and Metal Art Pieces,

MANUFACTURED BY

THE NATIONAL PAPETERIE COMPANY,

SPRINGFIELD, MASS.

ANNOUNCEMENT.

WE call the attention of the trade to our new line of FINE BRONZE and METAL ART PIECES, comprising over two hundred styles, best Ancient and Modern Art subjects. These goods are made of pure Solid Bronze Metal, are not affected by moisture or changes in temperature, and we warrant them equal in every respect to any manufactured. We shall furnish them in Antique Brass, Bronze, or Copper, mounted with beveled Silk Plush frames, or with Silk Plush and outside oxidized frame, or unframed.

We want very much to have the trade see this new and very salable line of goods, as they are destined in great measure to supersede engravings and pictures as household ornaments, and wedding and other presents.

We respectfully solicit houses that have handled, or desire to handle, these goods, to send us their address, that we may inform them as to date Agent will be at their place, and to make sure that he calls on them.

THE NATIONAL PAPETERIE COMPANY,

MANUFACTURERS OF

PAPETERIES, FRAMES, MIRRORS, AND FINE ART BRONZE GOODS,

SPRINGFIELD, MASS.

CARVED AND ENGRAVED GLASS.

The carving of crystal and glass has generally for its object the obtaining of ornaments in relief; it is obtained by means of four vertical grindstones, which employed one after another are brought into play either by the foot of the workman or by steam.

The first of these grinders is made of iron, the second of grit stone, the third of marl, and the fourth of cork. On the iron wheel the workman throws from time to time sand which has been moistened by means of a sabot or of a small wooden bucket which is placed above the wheel, and which causes the water to fall drop by drop upon the sand.

This first, rough-hewing sort of process being completed, there is placed, instead of the iron wheel, a grinder of grit stone, the less hard action of which gives an additional degree of perfection to the cutting. Then comes the wooden wheel on which are thrown in rotation the sediment of the sand pulverized by the previous processes, emery, becoming gradually finer, and last of all, pewter. The process is terminated either by means of the same wooden grinder sprinkled with dry pewter, covered with woolen stuff, or by means of another grinder, made of cork.

The chiseling of the glass or crystal is obtained either by applying the process to smooth and lateral surfaces, or to the cylindrical part of the glass, or, it may be, on the *arete* of the wheels when put in motion. This system of decoration requiring, as we see, a rather long process, and an inevitable loss of material, cut glasses could not be purchased under somewhat high prices till a simple workman introduced a complete transformation into this branch of glass manufacture by the invention of molding.

A young workman of the name of Robinet, who was employed as a glass-blower in the manufactory of Baccarat, happening to have delicate lungs, and finding his strength diminishing to such an extent as to threaten his means of getting a livelihood, invented a pump which more than supplied the place of human strength. This invention, which dates from 1821, consists of a small cylinder made of tin or brass, from thirty to forty centimetres in length, by from six to eight in diameter, and closed by an end piece. In the interior of the cylinder is to be seen a spring on rollers made of iron, at its lower portion a wooden piston with an opening in the middle mounted with leather, and closed by a fastening a *baïsonette*. The mouth of the cylinder being thus placed in contact with the piston, the air is compressed with a strong pressure, and being held back within the cylinder and then forcibly thrown out, it causes the material to penetrate into all the anfractuosités of the mold.

It is by this cheap and expeditious means that wine glasses, decanters, &c., can be produced for a very low price, their ornamentation usually being what are technically called "slices of melon" or *quadrilles*. These glasses, though made in a mold, can be tooled by the crystal cutter. This invention, known now as the Robinet pump, is doubly valuable, from a philanthropic and from an industrial point of view. It obtained for its inventor a gold medal from the Société d'Encouragement, and a pension secured to him by the municipality of Baccarat.

Although engraving on glass produces a result totally opposite to what cutting does, because the former is made on the hollow surface, while the latter, as we have just shown, seldom produces anything besides ornaments in relief, the modes of execution offer at the same time a

rather strange resemblance, for both are produced by turning, with certain differences which we are about to mention.

In place of the wheels, which in cutting glass wear out and consume the material, the grain-ing is obtained by the help of a pin, which, terminated either by a point of tempered steel or by a piece of flint, is adjusted to a kind of small barrel, set in motion by a lathe. The motion once given, the workman takes the object which he wishes to grave, and following the outlines of the pattern he leans more or less hard upon the point of the pin according as he wishes the engraving to be more or less deep. The difficulties of this process, which, as one may easily believe, requires great lightness of touch in combination with great practice, can only be appreciated when one examines carefully those works on which the artist has been able to engrave, with great delicacy and in a small space, the most complicated landscapes and other subjects.

We may quote what M. Labarte says on this subject: "About the commencement of the seventeenth century there had been sent forth from certain glass manufactories of Bohemia vases of a correct form and enriched with ornaments, with subjects, and above all, with engraved portraits. Distinguished artists in Germany and Italy were employed, notwithstanding the fragility of the material, in decorating these vases, in imitation of rock crystal, with ornaments, with arabesques, and with subjects in intaglio, remarkable for their composition, the purity of the design and the finish of the execution. These pretty engravings would often have merited being fixed upon a subject less fragile." While perfectly agreeing with what is here stated respecting the beauty of these designs, we must own that there is a certain degree of monotony in them. * * * We have seen that with regard to cut glass, industry has discovered a process of popularizing them by means of a preliminary blowing; well-engraved glass has also its imitation, and the process employed is thus described by M. Peligot: "For the purpose of engraving on glass, fluorhydric acid, either in the gaseous or the liquid state, it is, perhaps, preferable to

employ it in the last-named form. The fluorhydric acid is prepared by the ordinary processes, by leaden retort, a portion of powdered flowers of calcium, and three portions and a half of concentrated sulphuric acid. The acid is mixed with half or a third part of its own weight in water, and is kept in a bottle made of lead, or, better still, of gutta-percha. The glass is coated with a varnish of wax and turpentine, applied hot with the aid of a brush. For designs intended to be especially fine, siccativ oil of linseed is employed. The design is traced out with a point, as with engravings, in aquafortis. The transparency of the linseed oil varnish renders it easy to reverse the tracing. The portion that has been varnished is then surrounded by a waxed pad, and the acid is caused to bite the glass for a longer or shorter time, according to the depth of the intaglio. It is then washed, first with water and then with essence or with alcohol, to remove the varnish. Of course the glass is only attacked in the portions which have been laid open by the graving tool."

As it is quite impossible, however carefully this chemical process may be performed, for every part into which the acid has bitten to have the neatness and perfect finish which can alone be imparted by the point of the tool, it will always be easy to distinguish the results of hand-labor from articles which are thrown off by machinery.—A. Sauzay.

Two floral novelties designed for a christening are thus described: "One was two feet long and represented a miniature baby made of creamy Maréchal Neil roses, in a cradle entirely of pale pink roses, with a border of ivy leaves and jasmine blossoms. The baby held a sceptre of heartsease in his hand, and had eyes of violets and lips of carnation leaves. His palms and the soles of his little bare feet were of the palest pink rose leaves. The other design was a little boy in a canoe, gathering roses with one hand and violets with the other; while ahead of him were thistles, with just a tiny channel through them. The river was represented by an oblong bed of silver star flowers; the canoe was made of golden asters, and the little boy of pink and white roses. The thistles were natural ones."

FRENCH ARTS AND MANUFACTURES.

French politico-economists are apt to be very assertive, avoiding many necessary qualifications to their statements, and not infrequently omitting to demonstrate the positions taken. One of their number, with a reputation to sustain, M. Antonin Proust, has lately issued a brochure affirming the decay of art industries in France, attributable by him to the want of good technical education. This assertion is certainly in opposition to the prevailing impression in this country on the subject, and runs counter to the report of a British Government commission appointed to inquire into technical instruction in France, which report has been republished by the Bureau of Education at Washington.

In Paris the apprenticeship school of the Boulevard de Vilette, the Ecoles des Arts et Metiers, and other kindred institutions not only in the capital, but in the centres of industry in the departments, continue in full vigor. The customs returns of the exterior commerce of France for the first nine months of this year show but a slight diminishment of exports of objects fabriques as compared with the corresponding period of 1882, an amount almost made up by the increase in other descriptions of merchandise. It is pertinent to add that a return lately published in the *Revue des Deux Mondes* of the wages paid to Paris artisans show them to be generally on a high scale. Let M. Proust apply himself to make out his case. It is equally hard to credit the statement of the well-known M. Balou in his late communication to the *Intransigeant*, that there is a want of enterprise and energy in French employers, affecting all national industries, due to their disposition to speculate with their profits rather than employ these in their own industries in improving their means of production. We agree with him that "the enormous public debt of \$34,000,000,000, which makes everything dear," and the heavy cost of transport to the producer, are recognizable depressing influences. A manufacturer is not to be accused of want of enterprise when overweighted with transit charges and import dues on raw material in face of the growing competition of France and Germany. The late decree of the President of the republic temporarily admitting cotton yarns free of duty is an indication that the duty has operated unfavorably. As to the failure to remodel machinery referred to by the writer as evidence of want of manufacturing enterprise, any large outlay in change of plant so as to introduce latest improvements is not to be looked to in the present perturbed political state of France, or without the full assurance of a long future of peace. It certainly receives no encouragement from the effort to extend the area of French trade in the East by the force of arms.—Bradstreet's.

Hand painting is not to be supplanted by the newer ribbon flowers in the matter of Christmas cards. Many varieties are to be seen. One novelty is a satchel of chamois ornamented with painted cats' tails, or bulrushes and water-lilies. Embossed velvet crimson roses are also displayed on these satchets. A unique ornament in the shape of a wooden shoe, decorated with blue ribbons and "Merrie Christmas" in gilt, "old English" type, is attracting attention. Bags of plush, with crescents, Chinese figures and kittens holding card receivers, are a pretty decoration for a parlor wall or side table. A delicate lavender kid glove, with an odor of wood-violets (which are hand-painted thereon), is constructed into a ring stand.

CYPRIOTE ANTIQUITIES.

Excavations at Curium, Cyprus, continue in the ancient necropolis rifled by various mediæval and modern diggers. An excavator, Richter, reports to the *Cyprus Herald*: "Nearly all the glass in this collection has an excellent iridescence, which is not always the case with antique glass. I have observed that, as a rule (although there are exceptions), the antique glass of Cyprus is more iridescent in tombs near the sea than in those in the interior and on the mountains. It appears that the proximity of the sea, the sea air, perhaps also the chloride of sodium, favor the iridescence. There are a good number of specimens that were colored by the glass-makers. We notice pieces of one sole artificial color (often blue, green, brown, red or white, but seldom other colors), and sometimes pieces of more than one artificial color. Where the artificially colored glasses have become iridescent they offer the most brilliant and beautiful effects and reflections of many varied tints. I noticed a number with decorations, such as ribs, prominences, or chamfers, but the collection is poor in rich molded glass. On the other hand, there are some specimens that I have not yet come across in all my excavations; these are hand-painted glasses. On one I saw a picture which proves how well the ancient painters could sketch. It is of a young man or woman standing in a long dress, extending both arms and holding in each hand a large bunch of grapes. The beautiful face, of ideal proportions, looks sideways, so that the looker-on gets the face about three-quarters full. The lines foreshortening the face are drawn with the true knowledge of a good artist and master. Round the edge of the vessel are introduced, with much ability, little flowers, leaves and tendrils; these decorations are most artistically executed; the whole forms a masterpiece of an elegant sketch."

CHALK INK FOR LITHOGRAPHIC STONES.

An excellent ink is said to be prepared by mixing in an earthen vessel two pounds of sulphate of soda and two pounds of common white powdered chalk. The composition must be incorporated by continuous stirring. After three hours have elapsed it must be filtered and half a pound of colored arabic added. The latter must be previously dissolved in four times its volume of rain water. The mixture should be kept unshaken for twenty-four hours, and then bottled up for use as required. The fluid is intended to be painted lightly over the drawing with a soft wide brush, a badger hair being preferable — *British Stationer*.

When People are Traveling Comfort and Safety are the

TWO PRINCIPAL OBJECTS IN LIFE!**COMFORT!**

"The Erie is by far the smoothest road I ever traveled on, either in this country or in Europe; and I consider it the perfection of railroad traveling. With the clean, light and airy coaches, polite attendance, freedom from dust, noise and jar, we reached Chicago hardly realizing what a long journey we had performed. And then such a breakfast as we had the morning after leaving New York, at Hornellsville, is certainly deserving 'honorable mention.' Such a table as they have there, with a full half an hour to enjoy it, is enough of itself to attract passengers."—Ex. U. S. Minister, E. B. Washburne.

SAFETY!

"5,491,441 Passengers were carried over the Erie Railway in 1881. Of this vast number, only two were killed—one by falling from the platform of a car on which he insisted on standing, and the other in jumping from a train while in motion."—New York State Engineer's Report for 1881.

No better evidence than the above need be wanted that both of these objects are secured to the traveler who purchases his ticket over the

BYRON WESTON,

DALTON, MASS., U. S. A.,

HAS BEEN AWARDED THE

GRAND PRIZE GOLD MEDAL

AND RECOMMENDED THE

Medal of Honor and Perfection

At PARIS, 1878,

This being the HIGHEST and ONLY AWARD given for

LINEN RECORD & LEDGER PAPER

Also, the only Gold Medal given for Ledger Paper at the Adelaide, Australia, Exhibition, 1881.

—A SPECIALTY.—

THIS Paper has received THE HIGHEST PREMIUM over all
others from the Cincinnati Industrial Exhibition, Massachusetts
Charitable Mechanics' Association, Franklin Institute of Philadelphia,
Louisville Exposition, Medal and diploma from United States Centennial
Commission, Medal of Progress American Institute, 1877, and Medal of
Improvement and Progress, Boston, 1878. Its

PRINCIPAL ADVANTAGES

are as follows:—1. It contains more LINEN than any other Ledger
Paper, has a longer fibre, and is, consequently, tougher. 2. Having a
harder and better body, it frays less in erasure, so that by simply using
the rubber after the eraser, the ink is prevented from spreading. 3. It is
more uniform in Weight Color and Finish. 4. It never cockles if properly
bound. 5. Its chemical action upon ink is such that it both writes and rules
up better. For proof of the foregoing, refer to a large number of Sta-
tioners, Bookbinders, Bookkeepers, and Recorders, who have given it,
after a severe test, the preference over all others. This paper is Double
Sized, and will stand any climate or the most acid of fluid inks.

Send for sample sheet, ERASE and REWRITE FOUR TIMES on same spot.
Each sheet is water-marked with name and date.
